

Fundamentals of Optical Waveguides

Katsunari Okamoto

Contents

Preface	xiii
1 Wave Theory of Optical Waveguides	1
1.1 Waveguide structure	1
1.2 Formation of guided modes	2
1.3 Maxwell's equations	6
1.4 Propagating power	9
2 Planar Optical Waveguides	13
2.1 Slab waveguides	13
2.1.1 Derivation of basic equations	13
2.1.2 Dispersion equations for TE and TM modes	15
2.1.3 Computation of propagation constant	19
2.1.4 Electric field distribution	22
2.1.5 Dispersion equation for TM mode	23
2.2 Rectangular waveguides	26
2.2.1 Basic equations	26
2.2.2 Dispersion equations for E_{pq}^x and E_{pq}^y modes	27
2.2.3 Kumar's method	30
2.2.4 Effective index method	35
2.3 Radiation field from a waveguide	39
2.3.1 Fresnel and Fraunhofer regions	39
2.3.2 Radiation pattern of Gaussian beam	41
3 Optical Fibers	47
3.1 Basic equations	47
3.2 Wave theory of step-index fibers	48
3.2.1 TE modes	48
3.2.2 TM modes	52
3.2.3 Hybrid modes	53
3.3 Optical power carried by each mode	56
3.3.1 TE modes	57
3.3.2 TM modes	58
3.3.3 Hybrid modes	59

3.4	Linearly Polarized (LP) modes	59
3.4.1	Unified-dispersion equation for LP modes	60
3.4.2	Dispersion characteristics of LP modes	62
3.4.3	Propagating power of LP modes	66
3.5	Fundamental HE_{11} mode	68
3.6	Dispersion characteristics of step-index fibers	71
3.6.1	Signal distortion caused by group velocity dispersion	71
3.6.2	Mechanisms causing dispersion	77
3.6.3	Derivation of delay-time formula	78
3.6.4	Chromatic dispersion	83
3.6.5	Zero-dispersion wavelength	88
3.7	Wave theory of graded-index fibers	89
3.7.1	Basic equations and mode concepts in graded-index fibers	89
3.7.2	Analysis of graded-index fibers by the WKB method	95
3.7.3	Dispersion characteristics of graded-index fibers	99
3.8	Relation between dispersion and transmission capacity	103
3.8.1	Multimode fibers	105
3.8.2	Single-mode fibers	105
3.9	Birefringent optical fibers	107
3.9.1	Two orthogonally polarized modes in nominally single-mode fibers	107
3.9.2	Derivation of basic equations	109
3.9.3	Elliptical-core fibers	112
3.9.4	Modal birefringence	113
3.9.5	Polarization mode dispersion	115
4	Coupled Mode Theory	125
4.1	Derivation of coupled mode equations based on perturbation theory	125
4.2	Codirectional couplers	132
4.3	Contradirectional coupling in corrugated waveguides	134
4.3.1	Transmission and reflection characteristics in uniform gratings	134
4.3.2	Phase-shift grating	140
4.4	Derivation of coupling coefficients	142
4.4.1	Coupling coefficients for slab waveguides	142
4.4.2	Coupling coefficients for rectangular waveguides	143
4.4.3	Derivation of coupling coefficients based on mode interference	145
4.4.4	Coupling coefficients for optical fibers	148
4.4.5	Coupling coefficients for corrugated waveguides	152
4.5	Optical waveguide devices using directional couplers	159
4.5.1	Mach-Zehnder interferometers	159
4.5.2	Ring resonators	161
4.5.3	Bistable devices	164

4.6	Fiber Bragg gratings	166
5	Nonlinear Optical Effects in Optical Fibers	173
5.1	Figure of merit for nonlinear effects	173
5.2	Optical Kerr effect	174
5.2.1	Self-phase modulation	175
5.2.2	Nonlinear Schrödinger equation	177
5.3	Optical solitons	181
5.3.1	Fundamental and higher-order solitons	181
5.3.2	Fiber loss compensation by optical amplification	185
5.3.3	Modulational instability	187
5.3.4	Dark solitons	192
5.4	Optical pulse compression	193
5.5	Light scattering in isotropic media	196
5.5.1	Vibration of a one-dimensional lattice	196
5.5.2	Selection rules for light scattering by phonons	199
5.6	Stimulated Raman scattering	202
5.7	Stimulated Brillouin scattering	205
5.8	Second-harmonic generation	209
5.9	Erbium-doped fiber amplifier	211
6	Finite Element Method	217
6.1	Introduction	217
6.2	Finite element method for analysis of slab waveguides	218
6.2.1	Variational formulation	218
6.2.2	Discretization of the functional	220
6.2.3	Dispersion equation based on the stationary condition	222
6.2.4	Dispersion characteristics of graded-index slab waveguides	224
6.3	Finite element method analysis of optical fibers	229
6.3.1	Variational formulation	229
6.3.2	Discretization of the functional	230
6.3.3	Dispersion equation based on the stationary condition	231
6.3.4	Single-mode conditions of graded-index fibers	233
6.3.5	Variational expression for the delay time	235
6.4	Finite element method analysis of rectangular waveguides	239
6.4.1	Vector and scalar analyses	239
6.4.2	Variational formulation and discretization into finite number of elements	240
6.4.3	Dispersion equation based on the stationary condition	244
6.5	Stress analysis of optical waveguides	253
6.5.1	Energy principle	253
6.5.2	Plane strain and plane stress	253
6.5.3	Basic equations for displacement, strain, and stress	256
6.5.4	Formulation of the total potential energy	257
6.5.5	Solution of the problem by the stationary condition	262

6.5.6	Combination of finite element waveguide and stress analysis	264
7	Beam Propagation Method	273
7.1	Basic equations for beam propagation method based on the FFT	273
7.1.1	Wave propagation in optical waveguides	273
7.1.2	Pulse propagation in optical fibers	274
7.2	FFTBPM analysis of optical wave propagation	276
7.2.1	Formal solution using operators	276
7.2.2	Concrete numerical procedures using the split-step Fourier algorithm	277
7.3	FFTBPM analysis of optical pulse propagation	280
7.4	Discrete Fourier transform	282
7.5	Fast Fourier transform	288
7.6	Formulation of numerical procedures using the discrete Fourier transform	291
7.7	Applications of FFTBPM	294
7.8	Finite difference method analysis of planar optical waveguides	303
7.8.1	Derivation of basic equations	303
7.8.2	Transparent boundary conditions	308
7.8.3	Solution of tridiagonal equations	310
7.9	FDMBPM analysis of rectangular waveguides	311
7.10	FDMBPM analysis of optical pulse propagation	317
8	Staircase Concatenation Method	323
8.1	Staircase approximation of waveguide boundary	323
8.2	Amplitude and phases between the connecting interfaces	326
8.3	Wavelength division multiplexing couplers	331
8.4	Wavelength-flattened couplers	332
9	Planar Lightwave Circuits	341
9.1	Waveguide fabrication	342
9.2	$N \times N$ star coupler	343
9.3	Arrayed-waveguide grating	346
9.3.1	Principle of operation and fundamental characteristics	346
9.3.2	Flat-spectral-response AWG	360
9.3.3	Unequal-channel-spacing AWG	364
9.3.4	Variable-bandwidth AWG	365
9.3.5	Uniform-loss cyclic-frequency (ULCF) AWG	366
9.3.6	Athermal (temperature-insensitive) AWG	371
9.3.7	Multiwavelength simultaneous monitoring device using the AWG	375
9.3.8	Phase error compensation of the AWG	378
9.4	Optical add/drop multiplexer	381
9.5	$N \times N$ matrix switches	385

9.6	Lattice-form programmable dispersion equalizers	385
9.7	Hybrid integration technology using PLC platforms	390
10	Several Important Theorems and Formulas	401
10.1	Gauss's theorem	401
10.2	Green's theorem	405
10.3	Stokes' theorem	407
10.4	Integral theorem of Helmholtz and Kirchhoff	411
10.5	Fresnel–Kirchhoff diffraction formula	413
10.6	Formulas for vector analysis	417
10.7	Formulas in cylindrical and spherical coordinates	419
10.7.1	Cylindrical coordinates	419
10.7.2	Spherical coordinates	420
	Index	421
