

SIXTH EDITION

TOOLS FOR STRUCTURED AND OBJECT-ORIENTED DESIGN

AN INTRODUCTION TO
PROGRAMMING LOGIC

MARILYN BOHL • MARIA RYNN

Contents

Part One—Structured Programming Concepts

1	Introduction to Structured Design	3
	Objectives	3
	Introduction	3
	System Development Life Cycle	4
	Analyze the Current System	4
	Define the New System Requirements	4
	Design the New System	5
	Develop the New System	6
	Implement the New System	12
	Evaluate the New System	12
	Structured Programming	12
	Basic Control Structures	13
	Key Terms	15
	Exercises	16

2	SIMPLE SEQUENCE Control Structure	17
	Objectives	17
	Introduction	17
	Data Hierarchy	19
	Sales Application Example	20
	Sales Application System Flowchart	20
	Sales Application Program Flowchart	21
	Design Verification	26
	Sample Problem 2.1 (Temperature Conversion Problem)	26
	Sample Problem 2.2 (Billing Problem)	28
	Flowcharting Tools	31
	Enrichment (Basic)	32
	Enrichment (Visual Basic)	33
	Key Terms	36
	Exercises	36

3	IFTHENELSE Control Structure	39
	Objectives	39
	Introduction	39
	Billing Example	39
	Pseudocode	41

IFTHENELSE Control Structure	41
Time Card Example	42
Sample Problem 3.1 (Payroll Problem)	44
Sample Problem 3.2 (Finding the Smallest Number)	45
Sample Problem 3.3 (Bank Problem)	47
Character-String Constants	49
Sample Problem 3.4 (Sales Problem)	50
Enrichment (Basic)	53
Enrichment (Visual Basic)	54
Key Terms	59
Exercises	59

4 DOWHILE Control Structure—	
Counter-Controlled Loops	63
Objectives	63
Introduction	63
Problem (Adding Six Numbers)	65
Simulation (Adding Six Numbers)	66
The DOWHILE Loop	67
DOWHILE Pseudocode	69
Counter-Controlled Loops	69
Sample Problem 4.1 (Payroll with Counter Loop)	70
Sample Problem 4.2 (Averaging Problem with Counter Loop)	72
Header Record Logic	72
Sample Problem 4.3 (Payroll with Header Record)	75
Sample Problem 4.4 (Averaging Problem with Header Record)	77
The No-Data Condition	78
Proper Programs	80
Enrichment (Basic)	80
Enrichment (Visual Basic)	81
Key Terms	84
Exercises	84

5 DOWHILE Control Structure—	
Trailer Record Logic	87
Objectives	87
Introduction	87
Sample Problem 5.1 (Defective Parts Problem)	88
Automatic End-of-File Processing	92
Sample Problem 5.2 (Defective Parts with Multiple Headings)	92

Multiple Headings—Summary	97
Sample Problem 5.3 (Credits Problem)	97
DOWHILE Loop Control—Summary	101
Enrichment (Basic)	101
Enrichment (Visual Basic)	104
Key Terms	108
Exercises	109
<hr/>	
6 Modularization	113
Objectives	113
Introduction	113
Structure Charts	116
Sample Problem 6.1 (Averaging Problem Using Modules)	119
Sample Problem 6.2 (Defective Parts with Multiple Headings Using Modules)	123
Sample Problem 6.3 (Credits Problem Using Modules)	127
Enrichment (Basic)	131
Enrichment (Visual Basic)	133
Key Terms	135
Exercises	136
<hr/>	
7 CASE Control Structure	139
Objectives	139
Introduction	139
Inventory Control Example	139
Solution 1: Nested IFTHENELSE Control Structure	141
Solution 2: CASE Control Structure	141
Sample Problem 7.1 (Op Code Problem)	144
Sample Problem 7.2 (Sales Problem without Modules)	146
Sample Problem 7.3 (Sales Problem Using Modules)	148
Sample Problem 7.4 (Sales Problem with Totals)	151
Enrichment (Basic)	158
Enrichment (Visual Basic)	159
Key Terms	166
Exercises	166
<hr/>	
8 DOUNTIL Control Structure	171
Objectives	171
Introduction	171
DOUNTIL Counter Loops	173
Sample Problem 8.1 (Property—Counter-Controlled)	174
Sample Problem 8.2 (Property—Header Record Logic)	176

Sample Problem 8.3 (Property—Trailer Record Logic)	179
DOWHILE versus DUNTIL	181
Enrichment (Basic)	184
Enrichment (Visual Basic)	185
Key Terms	189
Exercises	189

9 Introduction to Arrays	193
Objectives	193
Introduction	193
List Structures	193
List Examples	194
Sample Problem 9.1 (Finding the Smallest Number)	196
Sample Problem 9.2 (Finding the Average)	199
Sample Problem 9.3 (Counting Words)	200
Sample Problem 9.4 (Doubling an Array)	202
Sample Problem 9.5 (Squaring and Cubing an Array)	204
Table Structures	206
Table Examples	208
Sample Problem 9.6 (Seating Chart Problem)	210
Sample Problem 9.7 (Finding the Highest Average)	212
Sample Problem 9.8 (Two-Dimensional Array Computation)	217
Multidimensional Structures	220
Enrichment (Basic)	222
Enrichment (Visual Basic)	224
Key Terms	228
Exercises	228

Part Two—Object-Oriented Programming Concepts

10 Introduction to Object-Oriented Design	235
Objectives	235
Introduction	235
Objects and Classes	236
Object-Oriented Design	236
GradeBook Class	238
Encapsulation and Data Hiding	238
GradeBook Class Pseudocode	240
Driver Program—GradeBook Example	240
Constructors	243
Overloading	245

Destructors	247
Sample Problem 10.1 (Determining the Perimeter)	247
Sample Problem 10.2 (Determining the Perimeter and Area with Parameters and Return Values)	247
Key Terms	251
Exercises	251
<hr/>	
11 Inheritance	253
Objectives	253
Introduction	253
Generalization/Specialization	254
Inheritance	254
Class Hierarchy	255
Polymorphism	256
Employee Class	257
Faculty Subclass	257
Staff Subclass	259
Driver Program—Employee Example	260
Sample Problem 11.1 (A Structure for Bank Account Processing)	263
Sample Problem 11.2 (Implementing the Account Class)	265
Sample Problem 11.3 (Implementing the Standard Checking Account Class)	267
Abstract Class	269
Unified Modeling Language (UML)	271
Key Terms	272
Exercises	272
<hr/>	
12 Other Class and Object Relationships	275
Objectives	275
Introduction	275
Association	276
Sample Problem 12.1 (Vases and Flowers)	278
Aggregation	279
Managing Assets Example	279
Composition	280
Iterative Design	282
Sample Problem 12.2 (Planning a Group Event)	283
Inner Classes	285
Benefits of Object-Oriented Design	288
Object-Oriented Languages	289
Key Terms	290
Exercises	290

Part Three—Applications

13	Array Applications	295
	Objectives	295
	Introduction	295
	Table Lookups	295
	Sample Problem 13.1 (Table Lookup Example)	296
	Binary Searches	302
	Sample Problem 13.2 (Binary Search Example)	303
	Sorting Lists	310
	Exchanging Values	310
	Sample Problem 13.3 (Sort Example)	312
	Key Terms	316
	Exercises	317

14	Master File Update Processing	321
	Objectives	321
	Introduction	321
	File Maintenance	322
	Sequential Processing	323
	Direct Processing	324
	Sequential Master File Update Example	324
	Key Terms	338
	Exercises	338

15	Control-Break Processing	341
	Objectives	341
	Introduction	341
	Sample Problem 15.1 (Single-Level Control Break)	342
	Sample Problem 15.2 (Multiple-Level Control Break)	350
	Key Terms	364
	Exercises	364

APPENDIX A	Program Flowcharting Symbols	373
-------------------	-------------------------------------	------------

APPENDIX B	Structured-Programming Control Structures	377
-------------------	--	------------

APPENDIX C	Answers to Selected Exercises	383
-------------------	--------------------------------------	------------

	Index	401
--	--------------	------------
