# CONTENTS

## *Introduction*

*xxvii*

<b>PART 1</b>	<b>Creating High Availability Applications</b>	<b>1</b>
<b>CHAPTER 1</b>	<b>Understanding High Availability</b>	<b>3</b>
	High Availability Explained	4
	How Do I Know My Server Load?	5
	Load and Performance Testing	5
	The High-Availability Plan: Six Must-Haves for Building High-Availability Solutions	7
	Implement a Load-Balanced Web-Server Cluster	8
	Choose a Network Provider with Circuit Redundancy	10
	Install a Firewall	10
	Use RAID Level 5 on Database Servers	11
	Calculate Acceptable Risk	11
	Choose Redundant Server Components	12
	Some Truths About Web Hosting	13
	Active Site Monitoring	13
	The Quality of Service Guarantee	14
	What Next?	14
<b>CHAPTER 2</b>	<b>Monitoring System Performance</b>	<b>15</b>
	Understanding Performance	15
	The Devil's in the Details	15
	Monitoring Your ColdFusion MX Server	17
	Historical Analysis	18
	Analyzing ColdFusion MX Log Files	18
	Analyzing Web-Server Log Files	20
	Active Monitoring	20
	Server Probes	21
	Other Probes	24
	System Monitors	24
	Monitoring ColdFusion Using Perfmon and Settings	26
	Monitoring Performance on Unix and Linux Servers	33
	Deciding What to Do Next	35
	Typical Bottlenecks	35
	Some Issues to Consider When Looking for Bottlenecks	37
	Optimizing Your Code Versus Adding More Servers	37
<b>CHAPTER 3</b>	<b>Scaling with ColdFusion MX</b>	<b>39</b>
	The Importance of Scaling	39
	Scaling Considerations	40
	Tiered Application Architecture	41
	Server and Hardware Components	44
	Considerations for Choosing a Load-Balancing Option	46

User-Request Distribution Algorithms	48
Session State Management	48
Failover	49
Mixed Web Application Environments	49
How to Write ColdFusion MX Applications that Scale	49
Code Organization	49
Modularity	50
Streamlined, Efficient Code	50
Avoiding Common Bottlenecks	51
Keeping Web Site Servers in Sync	53
What to Maintain?	53
Archive and Deploy	54
Other Options	58
Hardware Versus Software Load-Balancing Options	59
ClusterCATS and Software-Based Load Balancing	59
Dedicated Load-Balancing Hardware	61
Scaling with ClusterCATS	62
Understanding ClusterCATS	63
Configuring	64
Hardware Load-Balancing Options	69
How Hardware Load Balancing Works	69
LocalDirector	70
Big IP	72
Finishing Up	72
<b>CHAPTER 4</b> Scaling with J2EE	73
Benefits of Deploying ColdFusion MX onto J2EE Application Server	74
Standards-Based	74
Support Legacy Infrastructure and Prior Investments	74
Deploying CFMX on J2EE Inherits Multi-Platform Interoperability	75
The Value of ColdFusion MX on J2EE	76
Leverage Diverse Developer Skill Sets	77
Improving Web Site Scalability	78
Understanding How MX Lives on Top of Java Server	81
Coding Implications from the Developer Perspective	84
J2EE Session Management	84
Supported Platforms	85
Scaling with CFMX and JRun	86
Scaling with Other Java Application Servers	90
<b>CHAPTER 5</b> Managing Session State in Clusters	91
What Is Session State?	91
The History of Managing State	92
Enter Cookies	92
Why Maintain State?	92

Options for Managing Session State	93
A Little About Server-Side ColdFusion CLIENT, APPLICATION, SERVER, and SESSION Variables	94
Embedding Parameters in a URL or a FORM Post	94
Cookies	95
SESSION Variables Versus CLIENT Variables	98
Keep the User on the Same Machine	100
Using a Central CLIENT Variable Repository	100
Java Sessions	104
Hardware-Based Session Management	106
Hybrid Solutions	106
<b>PART 2 Ensuring Security</b>	<b>109</b>
<b>CHAPTER 6 Understanding Security</b>	<b>111</b>
Security Risks	111
What Is ColdFusion's Concern and What Is Not	112
Encryption	112
Enabling SSL on a Server	117
Browser Validation	125
Cross-Site Scripting (XSS)	125
Form and URL Hacks	128
File Uploads	129
Authentication and Authorization	130
<b>CHAPTER 7 ColdFusion Security Options</b>	<b>133</b>
Relying on the Web Server or OS	133
Operating System Security	133
Windows 2000 and XP	133
Unix and Linux	139
Apache	140
iPlanet	143
Security Framework	148
Development Security	149
User Security	150
ColdFusion MX Login Example	153
<b>CHAPTER 8 Creating Server Sandboxes</b>	<b>157</b>
Understanding Sandboxes	157
Understanding File and Directory Permissions	158
Changes in ColdFusion MX	159
Creating and Securing Applications Using Sandboxes	162
Enabling Sandbox Security	162
Adding a Sandbox	163
Configuring Your Sandbox	165
The Blackbox Sandbox Example	170

<b>CHAPTER 9</b>	<b>Security in Shared and Hosted Environments</b>	<b>173</b>
	Security Risks	173
	CFML-Based Risks	173
	RDS-Based Risks	175
	Sandbox	176
	Securing Remote Development Services	177
	Configuring Multi-Homed Web Servers	178
	iPlanet	183
	Disabling JSP Functionality	185
	Other Issues	186
<b>PART 3</b>	<b>Advanced Application Development</b>	<b>191</b>
<b>CHAPTER 10</b>	<b>ColdFusion Scripting</b>	<b>193</b>
	Understanding <CFSCRIPT>	193
	What Is <CFSCRIPT>?	193
	Why Use <CFSCRIPT>?	194
	Tag Overview	195
	Using <CFSCRIPT>	196
	Variable Usage	196
	Using Comments	199
	Function Usage	200
	Using <code>if-else</code>	202
	Using <code>switch-case</code>	204
	Creating Loops	208
	Using <code>continue</code> and <code>break</code>	222
	Unsupported Tags and Functions	224
	Common Errors and Resolutions	225
	A Note About the {} Symbols	226
	A Note About Quotes	227
	User-Defined Functions in <CFSCRIPT>	227
<b>CHAPTER 11</b>	<b>Using Regular Expressions</b>	<b>231</b>
	Introducing Regular Expressions	231
	What Are Regular Expressions?	231
	RegEx Support in ColdFusion MX	234
	What's Changed in ColdFusion MX	234
	Where Can You Use Regular Expressions?	235
	Using Regular Expressions in ColdFusion	235
	Finding Matches with <code>REFind()</code>	236
	Working with Subexpressions	240
	Working with Multiple Matches	243
	Replacing Text using <code>REReplace()</code>	245
	Altering Text with Backreferences	249
	Altering Text Using a Loop	253

Some Convenient RegEx UDFs	255
Building a RegEx Testing Page	261
Crafting Your Own Regular Expressions	267
Understanding Literals and Metacharacters	267
Introducing the Cast of Metacharacters	268
Metacharacters 101: Character Classes	269
Metacharacters 102: Quantifiers	271
Metacharacters 201: Alternation	276
Metacharacters 202: Word Boundaries	276
Metacharacters 203: String Anchors	276
Metacharacters 301: Match Modifiers	279
Metacharacters 302: Lookahead Matching	280
Metacharacters 303: Backreferences Redux	282
Metacharacters 304: Escape Sequences	282
Learning More About Regular Expressions	283
<b>CHAPTER 12 Working with XML</b>	285
XML Overview	285
XML Documents	286
XML Elements	287
XML Names	289
Escaping XML Data	289
Validating XML Documents	290
DTD Elements	292
XML and ColdFusion	295
<b>CHAPTER 13 Manipulating XML with XSLT and XPath</b>	311
XSL	311
XPath	311
XSLT	311
XSL-FO	312
The Case for XPath	312
Introducing XPath	313
XPath Syntax	314
ColdFusion and XPath	315
Advanced XPath Expressions	316
XSLT	318
Elements in a Transformation	319
XSLT Syntax	320
ColdFusion and XSLT	321
Example 1	321
Example 2	323
XSLT Review	329

<b>CHAPTER 14 Using WDDX</b>	331
Introducing WDDX	331
Some WDDX Terminology	332
Tools and Languages Supported by WDDX	333
Using WDDX with ColdFusion	334
Introducing the <CFWDDX> Tag	334
Anatomy of a WDDX Packet	341
Using WDDX Packets to Store Information in Files	344
Other Places to Store WDDX Packets	357
Exchanging WDDX Packets Between Web Pages	359
Binary Content in WDDX Packets	366
Using WDDX with Other Applications	374
Introducing the WDDX SDK	374
Using WDDX with Active Server Pages	375
Using WDDX with Visual Basic and VBA	387
Using WDDX with Java	388
Using WDDX with Perl	402
Using WDDX with JavaScript	403
<b>CHAPTER 15 Using JavaScript and ColdFusion Together</b>	405
A Crash Course in JavaScript	406
JavaScript Language Elements	406
Understanding JavaScript's Relationship to Web Browsers	411
Understanding Scripting Object Models	412
JavaScript Objects Available in Web Pages	412
Understanding JavaScript Events	413
Including JavaScript Code in Web Pages	414
Browser Specific Features and Compatibility Issues	415
That's the End of the Crash Course	415
Working with Form Elements	416
Passing Variables to JavaScript	418
Passing Numbers to JavaScript	418
Passing Strings to JavaScript	419
Variable Passing Example: Mortgage Calculator	421
Passing Arrays to JavaScript	427
Passing Structures to JavaScript as Objects	429
Passing Enough Data to Relate Two Select Boxes	429
Cascading Selects, Approach #1: Creating an Array of Films	430
Cascading Selects, Approach #2: Using a Custom JavaScript Object	434
Passing Data to JavaScript Using <CFWDDX>	437
Using this Form of <CFWDDX>	438
Cascading Selects, Approach #3: Passing the Data Via <CFWDDX>	440
Working with WddxRecordset Objects	443
Cascading Selects, Approach #4: Using a WddxRecordset Object	445

Working with WDDX Packets in JavaScript	450
Serializing Packets with WddxSerializer	451
Deserializing Packets with WddxDeserializer	461
Cascading Selects, Approach #5: Fetching Matching Films in Real Time	462
Cascading Selects, Approach #6: Wrapping the WDDX Fetching in a Custom Tag	469
Calling CFCs from JavaScript	470
Passing Simple Variables to ColdFusion	471
Opening Popup Windows	481
<b>CHAPTER 16</b> Creating ColdFusion Components	485
Understanding CFCs	485
A Bit of Background...	486
ColdFusion Components Defined	486
A First Look	487
Some Terminology	487
When to Use a CFC	489
Creating CFCs	491
<CFCOMPONENT>	492
<CFFUNCTION>	493
<CFRETURN>	494
<CFARGUMENT>	494
Creating the CFC with Dreamweaver MX	496
Using the Component	497
The Object Approach	501
Introspection	504
Managing Components	507
Package Access	507
<b>CHAPTER 17</b> Advanced ColdFusion Components	509
All This 'Object' Stuff	509
The THIS Scope	510
Inheritance	515
Persistence & Constructors	519
Constructors	521
Security	525
Access Control	526
Role-Based Security in CFCs	528
CFC "Good" Practices	532
Use Hints	532
Avoid ACCESS="REMOTE"	532
Use Datatypes	532
Design for Your Project	533
Use CFCs!	533

<b>CHAPTER 18 Using Server-Side HTTP and FTP</b>	535
Overview	535
<CFHTTP>	536
Errors and Results for a <CFHTTP> Call	538
Using the <CFHTTTPARAM> Tag	539
Putting <CFHTTP> to Use	540
Using the GET Method	540
Building a Query from a Text File	542
Using the POST Method	545
Creating Intelligent Agents with <CFHTTP>	547
Summarizing the <CFHTTP> Tag	555
<CFFTP>	556
Connection Operations with <CFFTP>	556
File and Directory Operations with <CFFTP>	558
Errors and Results for a <CFFTP> Call	560
Putting <CFFTP> to Use	562
Displaying Available Files	563
Using <CFFTP> to Download a File	564
Using <CFFTP> to Upload a File	565
Summarizing the <CFFTP> Tag	566
<b>CHAPTER 19 Interacting with Directory Services</b>	567
Understanding LDAP	567
Directory Structures	568
Name Conventions	569
Using <CFLDAP>	570
Tag Overview	570
Querying Public LDAP Servers	576
Interacting with Directories	577
ADSI and Exchange	577
Querying Directories	579
Adding Entries	582
Modifying Entries	585
Deleting Entries	592
<b>CHAPTER 20 Internationalization and Localization</b>	595
ColdFusion MX and Internationalization	595
Why Internationalization and Localization?	595
What Are the Main Issues?	596
What Is Internationalization?	596
What Is Localization?	596
What Is Involved in Localization/Internationalization?	597
Addresses	608
Date/Time Formatting	610
Unicode	618

Database Issues	623
Locale Functions	627
Other I18N Related Tags and Functions	629
What To Do If Your Locale's Not Supported by ColdFusion MX	630
Creating a Multilanguage Application	630
<b>PART 4 Extending ColdFusion</b>	<b>649</b>
<b>CHAPTER 21 Creating Advanced Custom Tags</b>	<b>651</b>
Reviewing Simple CFML Custom Tags	651
Custom Tags: Back to Basics	651
Working with Custom Tags	654
Using Paired Custom Tags	658
Using the ThisTag Scope	659
Wrapping Content in Paired Custom Tags	660
Understanding Nested Custom Tags	665
Exploring <CF_CALENDAR>	667
Why Use a Nested Tag Architecture?	676
Creating <CF_CALENDAR> Parent Tag Pairs	677
Creating <CF_EVENT> Child Tag Pairs	685
Introducing <CFASSOCIATE>	689
Using AssocAttribs in the Parent Tag	693
Adding Some HTML Pizzazz	702
Adding Flexibility to <CFCALENDAR>	706
Using GetBaseTagData()	706
Using ThisTag.GeneratedContent	708
Dynamically Populating the Custom Tag	714
Adaptive Custom Tags	716
Securing Your Tags	722
Using CFENCODE	722
Distributed Processing	722
Wrapping Up CFML Custom Tags	723
<b>CHAPTER 22 Creating and Consuming Web Services</b>	<b>725</b>
Understanding Web Services	725
Evolution of the Web	726
Business Models	727
Core Technologies	728
WSDL	730
Creating Web Services	737
Components	737
Defining Complex Data Types	742
Consuming Web Services	747
Consult the WSDL	747
Invoking ColdFusion MX Web Services	747
Out and InOut Parameters	748

Complex Data Types	749
Invoking with Dreamweaver	750
Invoking .NET Web Services	751
Invoking Java Web Services	752
Database Web Services	753
Best Practices	754
Error Handling	754
Configuring in ColdFusion Administrator	755
Security	756
<b>CHAPTER 23 Extending ColdFusion with COM</b>	<b>757</b>
Understanding COM	757
Working with COM Objects in ColdFusion	758
Using COM with <CFOBJECT>	758
Using COM with <code>CreateObject()</code>	759
Setting and Retrieving Properties	760
Using Methods	762
ColdFusion Is Mostly Typeless; COM Is Mostly Not	763
Registering Objects	764
Viewing Objects with OLEView	765
Accessing Remote Objects	768
New Techniques for Improving Performance and Reliability	769
Storing Objects in Shared Memory Scopes	770
Creating Java Stubs for COM Objects	778
Integrating with Popular Applications	781
Integrating with Microsoft Word	781
Integrating with Microsoft Excel	786
Integrating with Outlook and Exchange	791
Using CFCs to Represent COM Objects	795
Integrating with the Microsoft Fax Service	797
Working with ADO and Microsoft Index Server	801
Common Questions and Problems	815
Releasing COM Objects	815
Working with NULL Values	816
Scoping Objects	817
Troubleshooting COM	817
<b>CHAPTER 24 Extending ColdFusion with CORBA</b>	<b>821</b>
Introduction to CORBA	821
Who Is the OMG?	822
How CORBA Works	822
Object Request Broker	822
Configuring ColdFusion to Work with CORBA	825
Working with CORBA in ColdFusion	826
Handling CORBA Exceptions	830

<b>CHAPTER 25</b> Integrating with Java	831
Using Java Class Objects	832
Instantiating Objects and Calling Methods	833
Working with Constructors	835
A Practical Example: Reading a File Line by Line	837
Hiding Java Code in Friendlier Wrappers	840
Using External Java Classes	842
About the ImageInfo Class	844
Dealing with Method Selection Problems	847
Using Java Beans	848
Using Tag Libraries	849
Finding Tag Libraries	849
Installing the Tag Library	849
Importing the Library with <CFIMPORT>	850
Using the Tag Library's Tags	851
Using the Jakarta Random Tag Library	851
Using CFML Expressions in JSP Tag Attributes	853
Creating Your Own JSP Tag Libraries	855
Accessing the Underlying Servlet Context	856
Integrating with Java Servlets and JSP Pages	857
Understanding Which Variables Can Be Shared	858
Sharing REQUEST Variables	858
A Simple Example	861
Integrating with EJBs	864
A Simple Example	864
Making It Easier with a Custom Tag	866
Writing Java CFX Tags	869
<b>CHAPTER 26</b> Extending ColdFusion with CFX	871
What Are CFX Tags?	871
When To Write (and Avoid Writing) a CFX Tag	872
Choosing Between C++ and Java	872
Introducing the CFX API	873
Working with the Tag's Attributes	873
Returning Variables and Text	874
Working with Queries	875
Working with Exceptions and Debugging	877
Writing CFX Tags with Java	878
Getting Started	879
A Word on Exceptions	884
Returning Query Objects	885
Writing CFX Tags with Visual C++	893
Getting Started	894
Writing the C++ Code	897
Compiling Your New CFX Tag	903

Registering the New Tag	903
Using the New Tag	905
Other C++ Examples	906
Generating Debug Output	906
New in ColdFusion MX: Returning Structures from CFX Tags	908
Using CFX Tags Safely: Locking and Thread Safety	911
Understanding Thread Safety	911
Locking CFX Tags with <CFLOCK>	912
If the CFX Tag Works with Files	912
Keeping the Page Itself in Mind	912
Using CFX Tags with Previous Versions of ColdFusion	913
<b>PART 5. Extending Dreamweaver MX</b>	<b>915</b>
<b>CHAPTER 27 Customizing Dreamweaver MX</b>	917
Understanding the Dreamweaver MX Environment	917
Dreamweaver MX Workspace	917
Configuration Options	922
Multiuser Environments	922
Dreamweaver MX Preferences	923
Keyboard Shortcuts	940
Create Your Custom Set	941
Tag Libraries	942
Customizations	944
Deleting Predefined Configurations	944
Dreamweaver MX File Types	945
Dialog Boxes	946
Code Hints	946
CodeHints XML Document Structure	946
Tag Chooser	949
TagChooser XML Document Structure	950
FTP Mappings	952
Browser Profiles	952
Third-Party Tags	954
Toolbars and Menus	956
The Insert Bar	956
Menus Are Everywhere!	960
Toolbars	968
<b>CHAPTER 28 Creating Dreamweaver MX Tag Dialogs and Property Inspectors</b>	977
Tag Dialogs	977
Creating a Tag Dialog	978
Finally, Our Tag Dialog	983
Adding the <CF_PIGLATIN> Tag to the Tag Chooser	985
Tag Dialog Functions	986
Dynamic Tag Dialogs	988

Property Inspectors	990
Putting Together a Property Inspector	991
The Property Inspector API	992
<b>CHAPTER 29</b> Creating Dreamweaver MX Behaviors	997
Understanding Behaviors	997
The Behaviors Panel	998
Writing Behaviors	1000
<b>CHAPTER 30</b> Dreamweaver MX Extensions	1005
Understanding Extensions	1005
What Makes Extensions Tick?	1006
Extension Folders	1007
Using the Object Model	1010
The Extension Manager	1011
Managing Extensions	1011
<b>PART 6</b> Appendices	1019
<b>APPENDIX A</b> Dreamweaver MX Object Model	1021
The button Form Object	1021
The checkbox Form Object	1022
The comment Object	1023
The document Object	1023
The dreamweaver Object	1024
The file Form Object	1024
The form Object	1025
The hidden Form Object	1026
The image Form Object	1027
The layer Object	1028
The image Form object	1028
The mmcolorbutton Object	1029
The NamedNodeMap Object	1030
The navigator Object	1030
The NodeList Object	1030
The option Form Object	1030
The password Form Object	1031
The radio Form Object	1032
The reset Form Object	1033
The select Form Object	1034
The submit Form Object	1035
The text Form Object	1035
The text Object	1036
The textarea Form Object	1037
The window Object	1038
<b>APPENDIX B</b> The WDDX.DTD File	1039
<i>Index</i>	1047
