

LINUX[®]

ADMINISTRATION HANDBOOK

EVI NEMETH • GARTH SNYDER • TRENT R. HEIN
with Adam Boggs, Matt Crosby, and Ned McClain

Table of Contents

FOREWORD	xxvii
PREFACE	xxviii
ACKNOWLEDGMENTS	xxxi

BASIC ADMINISTRATION

CHAPTER 1 WHERE TO START	1
Suggested background	2
Linux's relationship to UNIX	2
Linux and UNIX history	3
Linux distributions	4
So what's the best distribution?	5
Distribution-specific administration tools	6
Notation and typographical conventions	6
System-specific information	7
Where to go for information	7
Organization of the man pages	9
man : read manual pages	10
Other sources of Linux information	10
How to find and install software	11

Essential tasks of the system administrator	13
Adding and removing users	13
Adding and removing hardware	13
Performing backups	13
Installing new software	13
Monitoring the system	14
Troubleshooting	14
Maintaining local documentation	14
Auditing security	14
Helping users	14
System administration under duress	15
System Administration Personality Syndrome	15
Recommended reading	16
Exercises	17

CHAPTER 2 BOOTING AND SHUTTING DOWN 18

Bootstrapping	18
Automatic and manual booting	19
Steps in the boot process	19
Kernel initialization	20
Hardware configuration	20
System processes	20
Operator intervention (manual boot only)	21
Execution of startup scripts	21
Multiuser operation	21
Bootting PCs	22
How a PC is different from proprietary hardware	22
The PC boot process	22
Boot loaders: LILO and GRUB	23
LILO: the traditional Linux boot loader	23
GRUB: the GRand Unified Boot loader	24
Multibooting on PCs	25
Multibooting gotchas	26
LILO multiboot configuration	27
Bootting single-user mode	27
Startup scripts	28
init and run levels	29
Red Hat startup scripts	31
SuSE startup scripts	33
Debian startup scripts	35

Rebooting and shutting down	35
Turning off the power	36
shutdown : the genteel way to halt the system	36
halt : a simpler way to shut down	37
reboot : quick and dirty restart	37
telinit : change init 's run level	37
poweroff : ask Linux to turn off the power	37
Exercises	38
 CHAPTER 3 ROOTLY POWERS	 39
Ownership of files and processes	39
The superuser	41
Choosing a root password	41
Becoming root	42
su : substitute user identity	43
sudo : a limited su	43
Other pseudo-users	46
bin : legacy owner of system commands	46
daemon : owner of unprivileged system software	46
nobody : the generic NFS user	46
Exercises	47
 CHAPTER 4 CONTROLLING PROCESSES	 48
Components of a process	48
PID : process ID number	49
PPID : parent PID	49
UID and EUID : real and effective user ID	49
GID and EGID : real and effective group ID	50
Niceness	50
Control terminal	50
The life cycle of a process	50
Signals	51
kill and killall : send signals	54
Process states	55
nice and renice : influence scheduling priority	55
ps : monitor processes	56
top : monitor processes even better	58
Runaway processes	59
Exercises	61

CHAPTER 5 THE FILESYSTEM 63

Pathnames	64
Mounting and unmounting filesystems	65
The organization of the file tree	67
File types	69
Regular files	70
Directories	70
Character and block device files	71
Local domain sockets	72
Named pipes	72
Symbolic links	72
File attributes	73
The setuid and setgid bits	73
The sticky bit	73
The permission bits	73
Viewing file attributes	74
chmod : change permissions	76
chown : change ownership and group	77
umask : assign default permissions	78
Bonus flags	78
Exercises	80

CHAPTER 6 ADDING NEW USERS 81

The /etc/passwd file	81
Login name	82
Encrypted password	83
UID number	85
Default GID number	85
GECOS field	86
Home directory	86
Login shell	86
The /etc/shadow file	87
The /etc/group file	88
Adding users	90
Editing the passwd and shadow files	90
Setting an initial password	91
Creating the user's home directory	91
Copying in the default startup files	91
Setting the user's mail home	93
Editing the /etc/group file	93
Setting disk quotas	93
Verifying the new login	93
Recording the user's status and contact information	94
Removing users	94

Disabling logins.....	95
Account management utilities	95
Exercises.....	97
CHAPTER 7 SERIAL DEVICES	98
Serial standards.....	98
Alternative connectors.....	102
The mini DIN-8 variant.....	102
The DB-9 variant	103
The RJ-45 variant	104
The Yost standard for RJ-45 wiring.....	104
Hard and soft carrier	107
Hardware flow control.....	107
Cable length	108
Serial device files.....	108
setserial : tell the driver about serial port parameters.....	109
Software configuration for serial devices	110
Configuration of hardwired terminals	110
The login process	110
The <code>/etc/inittab</code> file	111
Terminal support: the termcap and terminfo databases	113
Special characters and the terminal driver	114
stty : set terminal options.....	115
tset : set options automatically	116
How to unwedge a terminal	117
Modems	117
Modulation, error correction, and data compression protocols.....	118
minicom : dial out	119
Bidirectional modems	119
Debugging a serial line.....	120
Other common I/O ports.....	120
Parallel ports	121
USB: the Universal Serial Bus	121
Exercises.....	123
CHAPTER 8 ADDING A DISK	124
Disk interfaces.....	124
The SCSI interface	125
The IDE interface	130
Which is better, SCSI or IDE?	131
Disk geometry.....	132
An overview of the disk installation procedure	134
Connecting the disk	134
Formatting the disk	135

Labeling and partitioning the disk	135
Establishing logical volumes	137
Linux filesystems	138
The ext2 and ext3 filesystems	139
Setting up ext3fs extensions	140
Setting up automatic mounting	141
Enabling swapping	143
fsck : check and repair filesystems	143
Adding a disk to Linux: a step-by-step guide	145
Exercises	150

CHAPTER 9 PERIODIC PROCESSES 152

cron : schedule commands	152
The format of crontab files	153
Crontab management	155
Some common uses for cron	156
Cleaning the filesystem	156
Network distribution of configuration files	157
Rotating log files	157
Exercises	158

CHAPTER 10 BACKUPS 159

Motherhood and apple pie	160
Perform all dumps from one machine.	160
Label your tapes	160
Pick a reasonable backup interval	160
Choose filesystems carefully	161
Make daily dumps fit on one tape	161
Make filesystems smaller than your dump device	161
Keep tapes off-site	162
Protect your backups	162
Limit activity during dumps	162
Check your tapes	162
Develop a tape life cycle	163
Design your data for backups	164
Prepare for the worst	164
Backup devices and media	164
Floppy disks	165
Super floppies	165
CD-R and CD-RW	166
Removable hard disks	166
8mm cartridge tapes	166
DAT (4mm) cartridge tapes	167

Travan tapes	167
DLT	167
AIT	167
Mammoth	168
Jukeboxes, stackers, and tape libraries	168
Hard disks	169
Summary of media types	169
What to buy	170
Setting up an incremental backup regime with dump	170
Dumping filesystems	170
Dump sequences	173
Restoring from dumps with restore	174
Restoring individual files	174
Restoring entire filesystems	176
Dumping and restoring for upgrades	178
Using other archiving programs	178
tar : package files	178
cpio : archiving utility from ancient times	179
dd : twiddle bits	179
volcopy : duplicate filesystems	180
Using multiple files on a single tape	180
Robot at your service?	181
Amanda	181
The architecture of Amanda	181
Amanda setup	182
The amanda.conf file	183
The disklist file	188
Amanda log files	190
Amanda debugging	190
File restoration from an Amanda backup	193
Alternatives to Amanda: other open source backup packages	195
Commercial backup products	195
ADSM/TSM	196
Veritas	196
Legato	196
Other alternatives	197
Recommended reading	197
Exercises	197

CHAPTER 11 SYSLOG AND LOG FILES

199

Logging policies	199
Throwing away log files	199
Rotating log files	200
Archiving log files	201

Linux log files	202
Special log files	203
Kernel and boot-time logging	204
logrotate : manage log files	205
Syslog: the system event logger	206
Configuring syslogd	207
Config file examples	210
Sample syslog output	212
Designing a logging scheme for your site	213
Software that uses syslog	214
Debugging syslog	214
Using syslog from programs	215
Condensing log files to useful information	216
Exercises	218

CHAPTER 12 DRIVERS AND THE KERNEL 219

Kernel adaptation	220
Why configure the kernel?	220
Configuration methods	221
Tuning a Linux kernel	221
Adding device drivers	222
Device numbers	223
Adding a Linux device driver	224
Device files	226
Naming conventions for devices	227
Loadable kernel modules	227
Building a Linux kernel	229
Building the Linux kernel binary	231
Don't fix it if it ain't broken	232
Recommended reading	232
Exercises	233

NETWORKING

CHAPTER 13 TCP/IP NETWORKING 237

TCP/IP and the Internet	238
A brief history lesson	238
How the Internet is managed today	239
Network standards and documentation	240
Networking road map	241

Packets and encapsulation	242
The link layer	243
Packet addressing	245
Ports	247
Address types	247
IP addresses: the gory details	247
IP address classes	248
Subnetting and netmasks	248
The IP address crisis	251
CIDR: Classless Inter-Domain Routing	252
Address allocation	254
Private addresses and NAT	255
IPv6 addressing	257
Routing	260
Routing tables	260
ICMP redirects	261
ARP: The address resolution protocol	262
Adding a machine to a network	264
Assigning hostnames and IP addresses	265
ifconfig : configure network interfaces	266
mii-tool : configure autonegotiation and other media-specific options	269
route : configure static routes	270
Default routes	272
Configuring DNS	272
The Linux networking stack	273
Distribution-specific network configuration	274
Network configuration for Red Hat	274
Network configuration for SuSE	276
Network configuration for Debian	277
Network configuration with a GUI	278
DHCP: the Dynamic Host Configuration Protocol	278
DHCP software	279
How DHCP works	280
ISC's DHCP server	280
DHCP configuration for Red Hat	282
DHCP configuration for SuSE	283
DHCP configuration for Debian	283
Linux dynamic reconfiguration and tuning	284
Security issues	286
IP forwarding	286
ICMP redirects	286
Source routing	286
Broadcast pings and other forms of directed broadcast	286

IP spoofing	287
Host-based firewalls	288
Virtual private networks	288
Security-related kernel variables	288
Linux NAT (IP masquerading)	289
PPP: the Point-to-Point Protocol	290
Addressing PPP performance issues	291
Connecting to a network with PPP	291
Making your host speak PPP	292
Controlling PPP links	292
Finding a host to talk to	292
Assigning an address	292
Routing	293
Ensuring security	293
Using terminal servers	293
Using chat scripts	293
Linux PPP configuration	294
Linux networking quirks	301
Recommended reading	302
Exercises	304

CHAPTER 14 ROUTING

305

Packet forwarding: a closer look	306
Routing daemons and routing protocols	308
Distance-vector protocols	309
Link-state protocols	309
Cost metrics	310
Interior and exterior protocols	311
Protocols on parade	311
RIP: Routing Information Protocol	312
RIP-2: Routing Information Protocol, version 2	312
OSPF: Open Shortest Path First	313
IGRP and EIGRP: Interior Gateway Routing Protocol	313
IS-IS: the ISO "standard"	313
MOSPF, DVMRP, and PIM: multicast routing protocols	314
Router Discovery Protocol	314
routed : RIP yourself a new hole	314
gated : a better routing daemon	315
gated startup and control	315
Tracing	316
The gated configuration file	316
Option configuration statements	317
Network interface definitions	318
Other miscellaneous definitions	320

Protocol configuration for RIP	321
Some preliminary background on OSPF	322
Protocol configuration for OSPF	324
Protocol configuration for ICMP redirects.	325
Static routes	325
Exported routes	326
A complete gated configuration example	327
Routing strategy selection criteria	329
Cisco routers	330
Recommended reading	332
Exercises	334

CHAPTER 15 NETWORK HARDWARE

335

LAN, WAN, or MAN?	335
Ethernet: the common LAN	336
How Ethernet works.	336
Ethernet topology	337
Unshielded twisted pair.	338
Connecting and expanding Ethernets.	340
Wireless: the nomad's LAN.	344
FDDI: the disappointing and expensive LAN.	345
ATM: the promised (but sorely defeated) LAN	346
Frame relay: the sacrificial WAN	347
ISDN: the indigenous WAN	347
DSL and cable modems: the people's WAN	348
Where is the network going?	349
Network testing and debugging	349
Building wiring	350
UTP cabling options.	350
Connections to offices	351
Wiring standards	351
Network design issues	351
Network architecture vs. building architecture	352
Existing networks	353
Expansion	353
Congestion	353
Maintenance and documentation	353
Management issues	354
Recommended vendors	355
Cables and connectors	355
Test equipment	355
Routers/switches	356
Recommended reading	356
Exercises	356

CHAPTER 16 THE DOMAIN NAME SYSTEM	357
DNS for the impatient: adding a new machine.....	357
The history of DNS.....	359
Who needs DNS?.....	360
What's new in DNS.....	361
The DNS namespace.....	362
Masters of their domains.....	365
Selecting a domain name.....	366
Domain bloat.....	367
Registering a second-level domain name.....	367
Creating your own subdomains.....	367
The BIND software.....	368
Versions of BIND.....	368
Finding out what version you have.....	369
Components of BIND.....	370
named : the BIND name server.....	370
Authoritative and caching-only servers.....	371
Recursive and nonrecursive servers.....	372
The resolver library.....	373
Shell interfaces to DNS.....	373
How DNS works.....	373
Delegation.....	373
Caching and efficiency.....	375
The extended DNS protocol.....	376
BIND client issues.....	376
Resolver configuration.....	377
Resolver testing.....	379
Impact on the rest of the system.....	380
BIND server configuration.....	380
Hardware requirements.....	380
named startup.....	381
Configuration files.....	381
The include statement.....	383
The options statement.....	383
The acl statement.....	389
The server statement.....	389
The logging statement.....	390
The zone statement.....	391
The key statement.....	394
The trusted-keys statement.....	394
The controls statement.....	395
Split DNS and the BIND 9 view statement.....	397

BIND configuration examples	398
A home Linux box	398
A small security company	400
A university department	403
The DNS database	408
Resource records	408
The SOA record	411
NS records	413
A records	414
PTR records	414
MX records	415
CNAME records	417
The CNAME hack	418
LOC records	420
SRV records	421
TXT records	422
IPv6 resource records	422
IPv6 address records	423
IPv6 reverse records	424
Commands in zone files	427
The localhost zone	429
Glue records: links between zones	429
Updating zone files	431
Zone transfers	432
Dynamic updates	433
Security issues	435
Access control lists revisited	436
Confining named	437
Secure server-to-server communication with TSIG and TKEY	438
DNSSEC	440
Microsoft bad, Linux good	446
Testing and debugging	447
Logging	448
Debug levels	452
Debugging with ndc	453
Statistics for BIND 8	454
Statistics for BIND 9	455
Debugging with nslookup , dig , and host	456
Lame delegations	458
Loose ends	460
The hints file	460
Localhost configuration	461
Host management tools	461
DNS for systems not on the Internet	462

Distribution specifics	462
Versions	462
BIND files	462
The name server switch file	463
Configuration files	463
Recommended reading	464
Mailing lists and newsgroups	464
Books and other documentation	464
On-line resources	464
The RFCs	465
Exercises	466

CHAPTER 17 THE NETWORK FILE SYSTEM 468

General information about NFS	468
NFS protocol versions	468
Choice of transport	469
File locking	469
Disk quotas	470
Cookies and stateless mounting	470
Naming conventions for shared filesystems	470
Security and NFS	471
Root access and the nobody account	471
Server-side NFS	472
The exports file	473
nfsd : serve files	474
Client-side NFS	475
Mounting remote filesystems at boot time	477
Secure port restrictions	478
nfsstat : dump NFS statistics	478
Dedicated NFS file servers	479
Automatic mounting	479
automount	480
The master file	481
Map files	482
Executable maps	482
amd : a more sophisticated automounter	483
amd maps	483
Starting amd	485
Stopping amd	485
Recommended reading	485
Exercises	486

CHAPTER 18	SHARING SYSTEM FILES	487
What to share	488	
nscd : cache the results of lookups	489	
Copying files around	489	
rdist : push files	490	
rsync : transfer files more securely	493	
Pulling files	495	
NIS: the Network Information Service	496	
Netgroups	497	
Prioritizing sources of administrative information	498	
Advantages and disadvantages of NIS	499	
How NIS works	500	
Setting up an NIS domain	502	
NIS+: son of NIS	504	
LDAP: the Lightweight Directory Access Protocol	505	
LDAP documentation and specifications	506	
Hands-on LDAP	507	
Configuring an OpenLDAP server	507	
Populating your server	508	
Setting up an LDAP client	509	
LDAP and security	509	
Exercises	510	
 CHAPTER 19	 ELECTRONIC MAIL	 511
Mail systems	513	
User agents	513	
Transport agents	515	
Delivery agents	516	
Message stores	516	
Access agents	516	
Mail submission agents	517	
The anatomy of a mail message	517	
Mail addressing	518	
Reading mail headers	519	
Mail philosophy	523	
Using mail servers	523	
Using mail homes	525	
Using IMAP or POP	526	
Mail aliases	527	
Getting mailing lists from files	529	
Mailing to files	530	
Mailing to programs	531	
Examples of aliases	531	
Mail forwarding	532	

The hashed alias database	534
Mailing lists and list wrangling software	535
LDAP: the Lightweight Directory Access Protocol	538
sendmail : ringmaster of the electronic mail circus	541
The history of sendmail	541
Vendor-supplied versions of sendmail	542
sendmail installation from sendmail.org	543
Installing sendmail on Debian systems	546
The switch file	546
Modes of operation	546
The mail queue	548
sendmail configuration	550
Using the m4 preprocessor	551
The sendmail configuration pieces	552
Building a configuration file from a sample .mc file	553
Changing the sendmail configuration	554
Basic sendmail configuration primitives	554
The VERSIONID macro	554
The OSTYPE macro	555
The DOMAIN macro	557
The MAILER macro	557
Fancier sendmail configuration primitives	558
The FEATURE macro	559
The use_cw_file feature	559
The redirect feature	560
The always_add_domain feature	560
The nocanonify feature	560
Tables and databases	561
The mailertable feature	563
The genericstable feature	563
The virtusertable feature	564
The ldap_routing feature	565
Masquerading and the MASQUERADE_AS macro	566
The MAIL_HUB and SMART_HOST macros	567
Masquerading and routing	568
The nullclient feature	568
The local_lmtp and smrsh features	570
The local_procmail feature	570
The LOCAL_* macros	571
Configuration options	571
Configuration file examples	573
A computer science student's home machine	573
A small but sendmail -clueful company	575
Another master/client example	578
Red Hat sendmail configuration	581

SuSE sendmail configuration	583
Debian sendmail configuration	586
Spam-related features in sendmail	588
Relaying	590
The access database	592
Blacklisting users or sites	595
Header checking	596
Militering: mail filtering	597
Handling spam	598
Spam examples	599
SpamAssassin	602
Security and sendmail	603
Ownerships	603
Permissions	604
Safer mail to files and programs	605
Privacy options	606
Running a chrooted sendmail (for the truly paranoid)	607
Denial of service attacks	607
Forgeries	608
Message privacy	609
SASL: the Simple Authentication and Security Layer	610
sendmail performance	611
Delivery modes	611
Queue groups and envelope splitting	611
Queue runners	613
Load average controls	613
Undeliverable messages in the queue	613
Kernel tuning	615
sendmail statistics, testing, and debugging	615
Testing and debugging	616
Verbose delivery	617
Talking in SMTP	618
Logging	619
The Exim Mail System	620
History	621
Exim on Debian	621
Exim configuration	621
Exim/ sendmail similarities	622
Recommended reading	623
Exercises	625

CHAPTER 20	NETWORK MANAGEMENT AND DEBUGGING	627
	Troubleshooting a network	628
	ping : check to see if a host is alive	629
	traceroute : trace IP packets	631
	netstat : get tons o' network statistics	633
	Monitoring the status of network connections	633
	Inspecting interface configuration information	635
	Examining the routing table	636
	Viewing operational statistics for various network protocols	636
	Packet sniffers	637
	tcpdump : king of sniffers	638
	Ethereal: visual sniffer	639
	Network management protocols	639
	SNMP: the Simple Network Management Protocol	641
	SNMP organization	641
	SNMP protocol operations	642
	RMON: remote monitoring MIB	643
	The NET-SNMP agent	643
	Network management applications	644
	The NET-SNMP tools	645
	MRTG: the Multi-Router Traffic Grapher	646
	NOCOL: Network Operation Center On-Line	646
	Commercial management platforms	647
	Recommended reading	648
	Exercises	649
 CHAPTER 21	 SECURITY	 650
	Is Linux secure?	651
	Linux security, the CliffsNotes version	652
	Packet filtering	652
	Unnecessary services	652
	Software patches	652
	Backups	652
	Passwords	653
	Vigilance	653
	General philosophy	653
	How security is compromised	654
	Security problems in the /etc/passwd and /etc/shadow files	655
	Password checking and selection	655
	PAM: cooking spray or authentication wonder?	656
	Shadow passwords	657

Group logins and shared logins	658
Password aging	658
User shells	658
Rootly entries	658
Setuid programs	659
Important file permissions	660
Miscellaneous security issues	661
Remote event logging	661
Secure terminals	661
/etc/hosts.equiv and ~/.rhosts	661
rexecd and tftpd	662
fingerd	662
Security and NIS	662
Security and NFS	663
Security and sendmail	663
Security and backups	663
Trojan horses	663
Security power tools	664
nmap: scan network ports	664
ndiff: create nmap baselines and look for suspicious changes	666
SAINT: check networked systems for vulnerabilities	666
Nessus: next generation network scanner	667
crack: find insecure passwords	667
tcpd: protect Internet services	668
COPS: audit system security	668
tripwire: monitor changes to system files	669
Forensic tools	670
Cryptographic security tools	670
Kerberos: a unified approach to network security	671
PGP: Pretty Good Privacy	672
SSH: the secure shell	673
OPIE: One-time Passwords in Everything	675
Hardware tokens	675
Firewalls	676
Packet-filtering firewalls	676
How services are filtered	676
Service proxy firewalls	677
Stateful inspection firewalls	678
Firewalls: how safe are they?	678
Linux firewall features: IP tables	679
Virtual private networks (VPNs)	683
IPSEC tunnels	683
All I need is a VPN, right?	684

Sources of security information	684
CERT: a registered service mark of Carnegie Mellon University	685
SecurityFocus.com and the BugTraq mailing list	685
Crypto-Gram newsletter	685
SANS: the System Administration, Networking, and Security Institute	685
Distribution-specific security resources	686
Other mailing lists and web sites	686
Hardened Linux distributions	687
What to do when your site has been attacked	687
Recommended reading	689
Exercises	691

CHAPTER 22 WEB HOSTING AND INTERNET SERVERS 693

Web hosting	693
Web hosting basics	694
Uniform resource locators	695
How HTTP works	696
CGI scripting: generating content on the fly	696
Load balancing	697
HTTP server installation	697
Choosing a server	697
Installing Apache	698
Configuring Apache	699
Running Apache	700
High-performance hosting	700
Virtual interfaces	700
Configuring virtual interfaces	701
Telling Apache about a virtual interface	702
Caching and proxy servers	703
Setting up Squid	704
Anonymous FTP server setup	704
Exercises	707

BUNCH O'STUFF

CHAPTER 23 SOFTWARE INSTALLATION AND LOCALIZATION 711

Basic Linux installation	711
Automating installation	712
Netbooting PCs	712
PXE: the PC netbooting standard	713
Setting up PXE for Linux	713

Netbooting non-PCs	714
Kickstart: Red Hat's automated installer	714
YaST: SuSE's installation tool	717
SystemImager	719
Localization	722
Automation	723
Versioning your build	723
Rogue users and departments	724
Testing	725
Making changes undoable	726
Revision control	726
RCS: the Revision Control System	727
Documentation	729
Where to put local software	730
How much to install on client machines	731
Keeping your systems up to date with rsync or rdist	731
Package management	733
RPM packages	734
Debian packages	735
Automating package installation	736
The Red Hat Network	737
apt-get : automate downloading and installation	737
Configuring apt-get	739
An example /etc/apt/sources.list file	740
Using proxies to make apt-get scale	740
Setting up an internal APT server	740
Automating apt-get	741
Recommended reading	742
Exercises	743

CHAPTER 24 PRINTING

744

Mini-glossary of printing terms	745
Linux printing systems	746
Types of printers	747
Serial and parallel printers	747
Network printers	747
Life without PostScript	748
LPD: the good ol' printing system	748
An overview of the printing process	748
Controlling the printing environment	750
lpd : the print spooler	750
lpr : submit print jobs	751
lpq : view the printing queue	751
lprm : remove print jobs	751

lpc: make administrative changes	752
The /etc/printcap file	754
printcap variables	755
printcap variables for serial devices	759
printcap extensions	760
Printing to something besides a printer	760
LPRng	760
The LPRng commands	761
/etc/lpd.conf: configure lpd	762
/etc/lpd.perms: configure access control	762
Setting up the printcap file	763
Filters	763
Accounting	764
Adding a printer	764
Distribution-specific details	766
Debugging printing problems	766
Common printing software	767
ghostscript	767
mpage	767
enscript	768
Printer philosophy	768
Use printer accounting	768
Use banner pages only when necessary	768
Provide recycling bins	768
Provide previewers	769
Buy cheap printers	769
Secure your printer	769
Exercises	770

CHAPTER 25 MAINTENANCE AND ENVIRONMENT 771

Maintenance basics	771
Maintenance contracts	772
On-site maintenance	772
Board swap maintenance	772
Warranties	773
Board-handling lore	773
Static electricity	773
Reseating boards	774
Monitors	774
Memory modules	774
Preventive maintenance	775
Environment	776
Temperature	776
Humidity	776

Office cooling	776
Machine room cooling.....	776
Temperature monitoring.....	778
Power	778
Remote power control.....	779
Racks.....	779
Tools.....	780
Exercises.....	781
 CHAPTER 26 PERFORMANCE ANALYSIS	 782
What you can do to improve performance.....	783
Factors that affect performance	784
System performance checkup.....	785
Analyzing CPU usage.....	786
How Linux manages memory.....	788
Analyzing memory usage	790
Analyzing disk I/O	792
Help! My system just got really slow!.....	794
Recommended reading	796
Exercises.....	796
 CHAPTER 27 COOPERATING WITH WINDOWS	 797
File and print sharing.....	797
NFS: the Network File System	798
CIFS: the Common Internet File System.....	798
SMBFS: mount remote CIFS shares.....	798
Samba: CIFS server for Linux.....	798
Installing and configuring Samba	800
Debugging Samba.....	801
Unified Windows and Linux login authentication	802
Secure terminal emulation with SSH.....	803
X Windows emulators	803
PC mail clients.....	804
PC backups	805
Dual booting	805
Mounting foreign filesystems with Linux.....	805
Running Windows applications under Linux	806
Linux (and UNIX) on Windows.....	807
PC hardware tips.....	807
Recommended reading	808
Exercises.....	809

CHAPTER 28 DAEMONS	810
init : the primordial process	811
cron and atd : schedule commands	812
inetd and xinetd : manage daemons	812
Configuring inetd	813
Configuring xinetd	815
The services file	817
portmap/rpcbind : map RPC services to TCP and UDP ports	818
Kernel daemons	818
klogd : read kernel messages	818
File service daemons	818
rpc.nfsd : serve files	818
rpc.mountd : respond to mount requests	819
amd and automount : mount filesystems on demand	819
rpc.lockd and rpc.statd : manage NFS locks	819
rpciod : cache NFS blocks	819
rpc.rquotad : serve remote quotas	819
smbd : provide file and printing service to Windows clients	819
nmbd : NetBIOS name server	819
Administrative database daemons	820
ypbind : locate NIS servers	820
ypserv : NIS server	820
rpc.ypxfrd : transfer NIS databases	820
nsd : name service cache daemon	820
Internet daemons	820
talkd : connect to network chat service	820
sendmail : transport electronic mail	821
snmpd : provide remote network management service	821
rwhod : maintain remote user list	821
ftpd : file transfer server	821
popper : basic mailbox server	821
imapd : deluxe mailbox server	821
in.rlogind : remote login server	822
in.telnetd : yet another remote login server	822
sshd : secure remote login server	822
in.rshd : remote command execution server	822
in.rexecd : yet another command execution server	822
rsyncd : synchronize files among multiple hosts	822
routed : maintain routing tables	823
gated : maintain complicated routing tables	823
named : DNS server	823
syslogd : process log messages	823
in.fingerd : look up users	823
httpd : World Wide Web server	824
lpd : manage printing	824

Time synchronization daemons	824
timed : synchronize clocks	824
ntpd and xntpd : synchronize clocks even better	825
Booting and configuration daemons	825
dhcpcd : dynamic address assignment	825
in.tftpd : trivial file transfer server	825
rpc.bootparamd : advanced diskless life support	825
Exercises	826

CHAPTER 29 POLICY AND POLITICS

827

Linux culture	828
Mainstream Linux	829
Linux projects	830
Policy and procedure	830
Security policies	833
User policy agreements	834
Sysadmin policy agreements	835
Policy and procedures for emergency situations	836
Disaster planning	837
Miscellaneous tidbits	838
Legal issues	839
Liability	839
Encryption	840
Copyright	840
Privacy	842
Policy enforcement	843
Software licenses	844
Spam: unsolicited commercial email	845
Sysadmin surveys	846
SAGE salary survey	846
SANS salary survey	847
Scope of service	848
Trouble-reporting systems	849
Managing management	850
Hiring, firing, and training	851
Attitude adjustment	852
Operator wars	852
Iterative refinement	853
War stories and ethics	853
Boss's mistake #1	854
Boss's mistake #2	854
Which ones to fire	854
Engineers vs. IT department	855
Horndog Joe	855

Wedding invitations	856
Pornographic GIF images	856
Migrating data	857
Bill must die!	858
Second-hand stories from the World Trade Center	858
Local documentation	859
Procurement	860
Decommissioning hardware	861
Organizations, conferences, and other resources	862
LPI: the Linux Professional Institute	863
SAGE: the System Administrators Guild	864
SANS: the System Administration, Networking, and Security Institute	865
Mailing lists and web resources	865
Printed resources	865
Standards	866
LSB: the Linux Standard Base	866
POSIX	867
Sample documents	867
Recommended reading	867
Exercises	868
 COLOPHON	 869
INDEX	870
