Differential Equations

with
BOUNDARY VALUE PROBLEMS

CONTENTS

Preface ix

1

INTRODUCTION 1

- 1.1 Prologue: What Are Differential Equations? 1
- 1.2 Four Introductory Models 4
- 1.3 Fundamental Concepts and Terminology 14

2

LINEAR FIRST-ORDER EQUATIONS 25

- 2.1 Methods of Solution 25
- 2.2 Some Elementary Applications 32
 - 2.2.1 Projectile Motion with Resistance 33
 - 2.2.2 Mixing Problems 37
 - 2.2.3 Circuits 41
- 2.3 Generalized Solutions 44

3

NONLINEAR FIRST-ORDER EQUATIONS I 51

- 3.1 Direction Fields and Numerical Approximation 51
- 3.2 Separable Equations 59
- 3.3 Bernoulli and Riccati Equations 64
- 3.4 Reduction of Order 68
- 3.5 Nonlinear First-order Equations in Applications 73
 - 3.5.1 Motion with Nonlinear Resistance 73
 - 3.5.2 Torricelli's Law 78
 - 3.5.3 Nonlinear Circuits 84

4

NONLINEAR FIRST-ORDER EQUATIONS II 87

- 4.1 Construction of Local Solutions 87
- 4.2 Existence and Uniqueness 93
- 4.3 Qualitative and Asymptotic Behavior 99
- 4.4 The Logistic Population Model 105
- 4.5 Numerical Methods 115
- 4.6 A First Look at Systems 125

5 SECOND-ORDER LINEAR EQUATIONS I 133

- 5.1 Introduction: Modeling Vibrations 133
- 5.2 State Variables and Numerical Approximation 139
- 5.3 Operators and Linearity 147
- 5.4 Solutions and Linear Independence 152
- 5.5 Variation of Constants and Green's Functions 162
- 5.6 Power-Series Solutions 166
- 5.7 Polynomial Solutions 179

6 SECOND-ORDER LINEAR EQUATIONS II 185

- 6.1 Homogeneous Equations with Constant Coefficients 185
- 6.2 Exponential Shift 191
- 6.3 Complex Roots 196
- 6.4 Real Solutions from Complex Solutions 202
- 6.5 Unforced Vibrations 206
- 6.6 Periodic Force and Response 211

7 THE LAPLACE TRANSFORM 220

- 7.1 Definition and Basic Properties 220
- 7.2 More Transforms and Further Properties 227
- 7.3 Heaviside Functions and Piecewise-Defined Inputs 234
- 7.4 Periodic Inputs 241
- 7.5 Impulses and the Dirac Distribution 247
- 7.6 Convolution 252

8 FIRST-ORDER LINEAR SYSTEMS 259

- 8.1 Introduction 259
- 8.2 Two Ad Hoc Methods 265
- 8.3 Vector-Valued Functions and Linear Independence 269
- 8.4 Evolution Matrices and Variation of Constants 276
- 8.5 Autonomous Systems: Eigenvalues and Eigenvectors 283
- 8.6 e^{At} and the Cayley-Hamilton Theorem 293
- 8.7 Asymptotic Stability 301

9 GEOMETRY OF AUTONOMOUS SYSTEMS IN THE PLANE 309

- 9.1 The Phase Plane 309
- 9.2 Phase Portraits of Homogeneous Linear Systems 320
- 9.3 Phase Portraits of Nonlinear Systems 334
- 9.4 Limit Cycles 344
- 9.5 Beyond the Plane 355

10 **NONLINEAR SYSTEMS IN APPLICATIONS 366**

- 10.1 Lotka-Volterra Systems in Ecology 366
- 10.2 Infectious Disease and Epidemics 380
- 10.3 Other Biological Models 385
- 10.4 Chemical Systems 392
- 10.5 Mechanics 399

11 **DIFFUSION PROBLEMS AND FOURIER SERIES 408**

- 11.1 The Basic Diffusion Problem 408
- 11.2 Solutions by Separation of Variables 417
- 11.3 Fourier Series 427
- 11.4 Fourier Sine and Cosine Series 437
- 11.5 Sturm-Liouville Eigenvalue Problems 445
- 11.6 Singular Sturm-Liouville Problems 458
- 11.7 Eigenfunction Expansions 462

12 **FURTHER TOPICS IN PDES 472**

- 12.1 The Wave Equation 472
- 12.2 The 2-D Laplace Equation 484
- 12.3 The 2-D Diffusion Equation 497

APPENDICES 512

- I Linear Algebra 512
 - I.A. Linear Algebraic Equations 512
 - I.B. Matrices 523
 - I.C. Eigenvalues and Eigenvectors 543
- II Continuity and Differentiability on Intervals 557
- III Local Existence and Uniqueness Proofs 562
- IV Linear Differential Equations of Arbitrary Order 577
- V Bibliography 591
 - Hints and Answers 593
