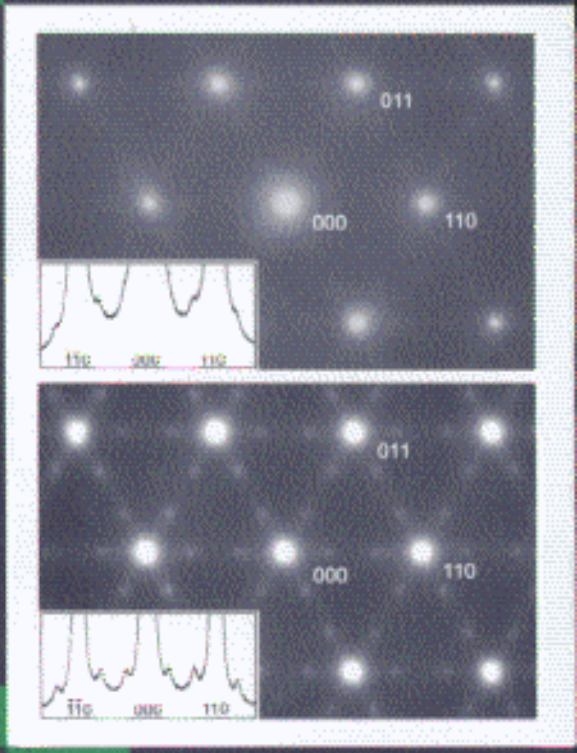
Analytical Electron Microscopy for Materials Science



Springer

Contents

Preface V

1. Basic Principles of Analytical Electron Microscopy

1.1 Interaction Between Electrons and Materials 1
1.1.1 Scattering of Electrons 1
1.1.2 Fundamental Quantities Characterizing Electron Scattering 1
1.1.3 Simulation of Scattering Process 4
1.2 Inelastic Electron Scattering and Analytical Electron Microscopy 6
1.2.1 Outline of Electron Energy-Loss Spectroscopy and Energy Dispersive X-ray Spectroscopy 6
1.2.2 Analytical Electron Microscopy and Materials Characterization 8
1.3 Hardware Controlled by Computer and Management of Analytical Data 9
References 11

2. Constitution and Basic Operation of Analytical Electron Microscopes

2.1 Basic Constitution of Analytical Electron Microscopes 13
2.1.1 Electron Gun 13
2.1.2 High Voltage Generator and Acceleration Tube 18
2.1.3 Illumination Lens System and a Deflector 19
2.1.4 Specimen Holders 20
2.1.5 Image-Forming Lens System 22
2.1.6 Viewing Chamber and Camera Chamber (Image Recording System) 27
2.2 Operation of Transmission Electron Microscopes 35
2.2.1 Alignment of Lenses and Astigmatism Correction 35
2.2.2 Focus Adjustment of the Objective Lens 39
References 40

3. Electron Energy-Loss Spectroscopy

3.1 Inelastic Scattering of Electrons 43
3.2 Spectrometer for EELS 44
3.2.1 Energy Dispersion 44
3.2.2 Spectrometer Optics 44
3.2.3 Serial Detection and Parallel Detection 45
3.2.4 Compensation of External Magnetic Field 47
3.3 Analytical Technique in EELS 48
3.3.1 Accelerating Voltage 48
3.3.2 Acceptance Angle 48
3.3.3 Analytical Modes 50

3.3.4 Detection Limit in EELS 50
3.4 Theoretical Background of EELS 50
3.5 Analysis of Electron Energy-Loss Spectra 53
3.5.1 Energy Loss Due to Plasmon Excitation 53
3.5.2 Measurement of Mean Free Path of Inelastic Scattering and Estimation of Specimen Thickness ... 55
3.5.3 Energy Loss Due to Inner-Shell Electron Excitation 57
3.6 Principles and Application of Energy Filtering 67
3.6.1 Electron Optics of Energy Filter 67
3.6.2 Energy Filters and Their Features 68
3.6.3 Analytical Technique and Application of Energy Filter 72
References 78

4. Energy Dispersive X-ray Spectroscopy
4.1 Emission of Characteristic X-rays 81
4.2 X-ray Detectors and Their Principles 83
4.2.1 Beryllium Window Type 83
4.2.2 Ultra-thin Window Type 84
4.3 Analytical Technique for EDS 85
4.3.1 Detection of X-rays 85
4.3.2 Spatial Resolution 86
4.3.3 Peak/Background Ratio 86
4.3.4 Elemental Mapping Method 86
4.3.5 Detection Limit of EDS 87
4.4 Quantitative Analysis 89
4.4.1 k-Factor 89
4.4.2 Practice in Quantitative Analysis 89
4.5 Notice of Quantitative Analysis 90
4.5.1 Absorption of X-rays by a Specimen 90
4.5.2 Statistical Error 91
4.5.3 Escape Peak, Sum Peak, and Others 91
4.5.4 Crystalline Specimens 91
4.6 ALCHEMI 93
4.6.1 Principle 93
4.6.2 Determination of Site Occupancy by ALCHEMI 97
4.6.3 Accuracy and Notice of ALCHEMI 99
Appendix 100
References 101

5. Peripheral Instruments and Techniques for Analytical Electron Microscopy
5.1 Electron Diffraction 103
5.1.1 Nano-beam Electron Diffraction 103
5.1.2 Convergent Beam Electron Diffraction 103
5.2 Lorentz Microscopy 109
5.2.1 Principles 110
5.2.2 Fresnel Method (Defocusing Method) 111
5.2.3 Foucault Method (In-focus Method) 113
5.3 Electron Holography 116
5.3.1 Principles 116
5.3.2 Practice of Electron Holography 118

5.4 Scanning Electron Microscopy 125
5.4.1 Principles and Application of SEM 126
5.4.2 High-Angle Scattered Dark-field STEM 129
5.5 Specimen Preparation Techniques 129
5.5.1 Crushing Method 130
5.5.2 Electropolishing 130
5.5.3 Chemical Polishing 131
5.5.4 Ultramicrotomy 131
5.5.5 Ion Milling 133
5.5.6 Focused Ion Beam 133
5.5.7 Vacuum Evaporation 134
5.5.8 Observation of Specimens 134
References 135

Appendix A: Physical Constants, Conversion Factors, Electron Wavelengths 137

Appendix B: Electron Binding Energies and Characteristic X-ray Energies 139

Appendix C: Vacuum System 145

Index 147

Notes

Principle of Electron Lens Action 25
High Voltage Wobbler and Image Wobbler 38
Aberration of an Energy Filter and Isochromaticity 69
Quantum Numbers Specifying the Energy Levels of Atomic Electrons 82
Bragg Condition and Higher-order Diffraction 109
Three-dimensional Information and Stereomicroscopy 120
Effect of Phase Shift Due to Inner Potential and Magnetic Field on a Hologram and a Reconstructed Phase Image 123
