

Y. Waseda

Anomalous X-Ray Scattering for Materials Characterization

Atomic-Scale Structure
Determination

Springer

Contents

1. Structural Characterization of Crystalline and Non-crystalline Materials – A Brief Background of Current Requirements	1
1.1 Site Occupancy	2
1.2 Quasi-crystals	3
1.3 Liquids and Glasses	3
1.4 Environmental Structure Around a Specific Element	4
1.5 Small-Angle X-ray Scattering	5
1.6 Surface and Layered Structure	5
References	6
2. Experimental Determination of Partial and Environmental Structure Function in Non-crystalline Systems – Fundamental Aspects	9
2.1 Partial Structure Function Analysis	13
2.2 Environmental Structure Function Analysis	18
References	19
3. Nature of Anomalous X-ray Scattering and Its Application to the Structural Analysis of Crystalline and Non-crystalline Systems	21
3.1 Application to Qualitative and Quantitative Powder Diffraction Analysis	25
3.2 Application to Radial Distribution Function Analysis for Non-crystalline Systems	31
References	37
4. Experimental Determination of the Anomalous Dispersion Factors of X-rays Theoretical Experimental Issues	39
4.1 Theoretical Estimation of the Anomalous Dispersion Factors	39
4.2 Experimental Determination of the Anomalous Dispersion Factors	46

4.2.1	Interferometry Method	46
4.2.2	Refraction and Reflection Method	48
4.2.3	Intensity Measurement Method	50
	References	56
5.	In-House Equipment and Synchrotron Radiation	
	Facilities for Anomalous X-ray Scattering	59
5.1	In-House Equipment	59
5.2	Synchrotron Radiation Facility	65
5.2.1	Transmission Mode	67
5.2.2	Reflection Mode	70
	References	72
6.	Selected Examples of Structural Determination	
	for Crystalline Materials Using the AXS Method	75
6.1	Spinel Ferrites	75
6.2	Superconductors	82
6.3	Ultrafine Particles and Catalytic Particles	87
6.4	Quasi-crystals	95
	References	107
7.	Selected Examples of Structural Determination	
	for Non-crystalline Materials Using the AXS Method	111
7.1	Partial Structure Functions in Molten Salts	112
7.2	Environmental Structures of Oxide	
	and Metallic Glasses	124
7.2.1	Oxide Glasses	125
7.2.2	Metallic Glasses	134
7.3	Solutions	138
7.3.1	Hydration Structure of ZnCl_2 Aqueous Solutions	139
7.3.2	Poly-molybdate Complexes in Acid Mo-Ni Solutions	142
7.4	Super-ionic Conducting Glasses	149
	References	156
8.	Anomalous Small-Angle X-ray Scattering	161
8.1	Nature of Guinier-Preston Zones	161
8.2	Composition Modulation in Amorphous Alloys	164
8.3	Concentration Profile and Specific Volume	
	in Multi-layered Thin Films	170
8.4	Morphology of a Sulfonated Polystyrene Ionomer	174
	References	178

9. Anomalous Grazing-Incidence X-ray Reflection	179
9.1 Fundamentals of the AGXR Method	182
9.2 Zr and Y Atoms in the Surface of a Sintered $\text{ZrO}_2\text{-Y}_2\text{O}_3$ Crystal Plate	184
9.3 Cr and Fe Atoms in the Passive Film of Stainless Steel	186
9.4 Ga and As Atomic Number Density in Multi-layered Thin Films	190
References	197
 10. Merits of Anomalous X-ray Scattering and Its Future Prospects	199
10.1 Comparison of the AXS Analysis with the EXAFS Analysis	199
10.2 Energy Dependence (1 – 50 keV) of the X-ray Anomalous Dispersion Factors	205
References	210
 Index	211
