

 WILEY

Structural Design for Fire Safety

Andrew H. Buchanan

Contents

Preface	xv
Notation	xvii
1 Introduction	1
1.1 Overview	1
1.2 Objective of this Book	1
1.3 Target Audience	1
1.4 Fire Safety	2
1.5 Performance-based Building Codes	2
1.6 Documentation and Quality Control	4
1.7 Fire Resistance	4
1.8 Risk Assessment	5
1.9 Engineering Judgement	5
1.10 Units	5
1.11 Organization of this Book	6
2 Fire Safety in Buildings	7
2.1 Overview	7
2.2 Fire Safety Objectives	7
2.2.1 Life safety	7
2.2.2 Property protection	8
2.2.3 Environmental protection	8
2.3 Process of Fire Development	8
2.3.1 Fire behaviour	10
2.3.2 Human behaviour	10
2.3.3 Fire detection	10
2.3.4 Active control	11
2.3.5 Passive control	12
2.4 Conceptual Framework for Fire Safety	12
2.4.1 Scenario analysis	12
2.4.2 Quantitative risk assessment	13
2.4.3 Fire safety concepts tree	14
2.5 Fire Resistance	16
2.5.1 Objectives for fire resistance	17
2.5.2 Fire design time	17
2.5.3 Trade-offs	19
2.5.4 Repairability and reserviceability	20

2.6	Controlling Fire Spread	21
2.6.1	Fire spread within the room of origin	21
2.6.2	Fire spread to adjacent rooms	22
2.6.3	Fire spread to other storeys	23
2.6.4	Fire spread to other buildings	25
2.7	Building Construction for Fire Safety	26
2.7.1	Fire following earthquake	26
2.7.2	Fire during construction and alterations	27
2.7.3	Assessment and repair of fire damage	30
3	Fire and Heat	35
3.1	Overview	35
3.2	Fuels	35
3.2.1	Materials	35
3.2.2	Calorific value	35
3.2.3	Fire load	37
3.2.4	Heat release rate	38
3.3	Combustion	38
3.3.1	Chemistry	38
3.3.2	Phase change and decomposition	39
3.3.3	Premixed flames	39
3.3.4	Diffusion flames	39
3.3.5	Flame temperature	39
3.3.6	Established burning	39
3.3.7	Smouldering combustion	40
3.3.8	Calorimetry	40
3.4	Fire Initiation	40
3.4.1	Sources and mechanisms	40
3.4.2	Pilot ignition and auto-ignition	41
3.4.3	Flame spread	41
3.5	Burning Objects	42
3.6	t-squared Fires	44
3.6.1	Calculations	45
3.7	Pre-flashover Design Fires	47
3.7.1	Fire spread to other items	47
3.7.2	Room fires	47
3.8	Heat Transfer	48
3.8.1	Conduction	48
3.8.2	Convection	51
3.8.3	Radiation	52
4	Room Fires	57
4.1	Overview	57
4.2	Pre-flashover fires	57
4.2.1	Burning items in rooms	57
4.2.2	Room fires	57
4.2.3	Pre-flashover fire calculations	59

4.3	Flashover	60
4.3.1	Conditions necessary for flashover	60
4.4	Post-flashover Fires	61
4.4.1	Ventilation controlled burning	61
4.4.2	Fuel controlled burning	65
4.4.3	Temperatures	67
4.4.4	Computer models	71
4.5	Design Fires	74
4.5.1	Hand methods	74
4.5.2	Published curves	74
4.5.3	Eurocode parametric fires	75
4.6	Other Factors	80
4.6.1	Additional ventilation openings	80
4.6.2	Progressive burning	81
4.6.3	Localized fires	82
5	Fire Severity	91
5.1	Overview	91
5.2	Fire Severity and Fire Resistance	91
5.2.1	Verification	91
5.2.2	Fire exposure models	94
5.2.3	Design combinations	95
5.3	Fire Severity	95
5.4	Standard Fire	96
5.4.1	Time-temperature curves	97
5.4.2	Furnace parameters	97
5.5	Equivalent Fire Severity	99
5.5.1	Real fire exposure	99
5.5.2	Equal area concept	99
5.5.3	Maximum temperature concept	100
5.5.4	Minimum load capacity concept	100
5.5.5	Time-equivalent formulae	101
6	Fire Resistance	107
6.1	Overview	107
6.2	Fire Resistance	107
6.3	Assessing Fire Resistance	107
6.4	Fire-resistance Tests	108
6.4.1	Standards	109
6.4.2	Test equipment	109
6.4.3	Failure criteria	110
6.4.4	Standard of construction	112
6.4.5	Furnace pressure	112
6.4.6	Applied loads	112
6.4.7	Restraint and continuity	113
6.4.8	Small-scale furnaces	114

6.5	Approved Fire-resistance Ratings	115
6.5.1	Listings	115
6.5.2	Expert opinion	116
6.6	Fire Resistance by Calculation	117
6.6.1	Fire model	118
6.6.2	Heat transfer model	118
6.6.3	Structural model	119
6.7	Fire Resistance of Assemblies	119
6.7.1	Walls	120
6.7.2	Floors	120
6.7.3	Beams	121
6.7.4	Columns	121
6.7.5	Penetrations	122
6.7.6	Junctions and gaps	122
6.7.7	Seismic gaps	123
6.7.8	Fire doors	123
6.7.9	Ducts	124
6.7.10	Glass	125
6.7.11	Historical construction	125
7	Design of Structures Exposed to Fire	127
7.1	Overview	127
7.2	Structural Design at Normal Temperatures	127
7.2.1	Loads	128
7.2.2	Structural analysis	129
7.2.3	Design format	129
7.2.4	Material properties	132
7.2.5	Probability of failure	134
7.3	Structural Design in Fire Conditions	135
7.3.1	Design equation	136
7.3.2	Loads for fire design	136
7.3.3	Structural analysis for fire design	138
7.3.4	Computer calculations	139
7.4	Material Properties in Fire	142
7.4.1	Testing regimes	142
7.4.2	Components of strain	143
7.5	Design of Individual Members Exposed to Fire	146
7.5.1	Tension members	146
7.5.2	Compression members	147
7.5.3	Beams	148
7.6	Design of Structural Assemblies Exposed to Fire	151
7.6.1	Frames	151
7.6.2	Redundancy	151
7.6.3	Disproportionate collapse	152
7.6.4	Continuity	152
7.6.5	Plastic design	158

7.6.6	Axial restraint	159
7.6.7	After-fire stability	165

8	Steel Structures	169
8.1	Overview	169
8.2	Behaviour of Steel Structures in Fire	169
8.3	Fire-resistance Ratings	170
8.3.1	Verification methods	170
8.3.2	Generic ratings	172
8.3.3	Proprietary ratings	172
8.3.4	Calculated ratings	174
8.4	Steel Temperatures	174
8.4.1	Fire exposure	174
8.4.2	Calculation methods	174
8.4.3	Section factor	175
8.4.4	Thermal properties	176
8.4.5	Temperature calculation for unprotected steelwork	177
8.4.6	Temperature calculation for protected steelwork	180
8.4.7	Typical steel temperatures	182
8.4.8	Temperature calculation for composite construction	182
8.4.9	Temperature calculation for external steelwork	186
8.5	Protection Systems	187
8.5.1	Concrete encasement	187
8.5.2	Board systems	188
8.5.3	Spray-on systems	190
8.5.4	Intumescent paint	190
8.5.5	Protection with timber	191
8.5.6	Concrete filling	191
8.5.7	Water filling	193
8.5.8	Flame shields	193
8.6	Mechanical Properties of Steel at Elevated Temperature	193
8.6.1	Components of strain	194
8.6.2	Thermal strain	194
8.6.3	Creep strain	194
8.6.4	Stress-related strain	195
8.7	Design of Steel Members Exposed to Fire	200
8.7.1	Design methods	200
8.7.2	Design of individual members	202
8.7.3	Bolted and welded connections	208
8.7.4	Cast-iron members	208
8.8	Design of Steel Buildings Exposed to Fire	209
8.8.1	Multi-storey steel framed buildings	209
8.8.2	Car-parking buildings	212
8.8.3	Single-storey portal-frame buildings	213

9	Concrete Structures	225
9.1	Overview	225
9.2	Behaviour of Concrete Structures in Fire	225
9.2.1	High-strength concrete	227
9.2.2	Lightweight concrete	227
9.2.3	Fibre reinforced concrete	228
9.2.4	Spalling	228
9.2.5	Masonry	229
9.2.6	Prestressed concrete	230
9.2.7	External reinforcing	231
9.3	Fire-resistance Ratings	231
9.3.1	Verification methods	231
9.3.2	Generic ratings	231
9.3.3	Protection systems	232
9.3.4	Joints between precast concrete panels	233
9.4	Concrete and Reinforcing Temperatures	233
9.4.1	Fire exposure	233
9.4.2	Calculation methods	233
9.4.3	Thermal properties	234
9.4.4	Published temperatures	236
9.5	Mechanical Properties of Concrete at Elevated Temperatures	239
9.5.1	Test methods	239
9.5.2	Components of strain	239
9.5.3	Thermal strain	239
9.5.4	Creep strain and transient strain	240
9.5.5	Stress-related strain	240
9.6	Design of Concrete Members Exposed to Fire	244
9.6.1	Member design	246
9.6.2	Simply supported slabs and beams	246
9.6.3	Shear strength	248
9.6.4	Continuous slabs and beams	248
9.6.5	Axial restraint	250
9.6.6	Columns	253
9.6.7	Walls	255
9.6.8	Frames	255
9.7	Composite Steel-Concrete Construction Exposed to Fire	255
9.7.1	Composite slabs	256
9.7.2	Composite beams	257
9.7.3	Composite columns	259
10	Timber Structures	273
10.1	Overview	273
10.2	Description of Timber Construction	273
10.2.1	Heavy timber construction	273
10.2.2	Glulam	274
10.2.3	Behaviour of timber structures in fire	274
10.2.4	Fire-retardant treatments	274

10.3 Fire-resistance Ratings	276
10.3.1 Verification methods	276
10.4 Wood Temperatures	277
10.4.1 Temperatures below the char	277
10.4.2 Thermal properties of wood	278
10.5 Mechanical Properties of Wood	278
10.5.1 Mechanical properties of wood at normal temperatures	279
10.5.2 Mechanical properties of wood at elevated temperatures	282
10.6 Design Concepts for Heavy Timber Exposed to Fire	292
10.6.1 Verification	294
10.6.2 Charring rate	295
10.6.3 Corner rounding	297
10.6.4 Effect of heated wood below the char line	298
10.6.5 Summary	301
10.6.6 Design for real fires	302
10.6.7 Empirical equations	304
10.7 Design of Heavy Timber Members Exposed to Fire	306
10.7.1 Beams	306
10.7.2 Tension members	307
10.7.3 Columns	307
10.7.4 Beam-columns	308
10.7.5 Decking	308
10.7.6 Timber-concrete composite structures	311
10.8 Behaviour of Timber Connections in Fire	312
10.8.1 Metal fasteners	313
10.8.2 Nails and screws	316
10.8.3 Bolted connections	317
10.8.4 Truss plates	318
10.8.5 Timber connectors	319
10.8.6 Glued connections	320
11 Light Frame Construction	327
11.1 Overview	327
11.2 Description	327
11.3 Fire Behaviour	330
11.3.1 Walls	331
11.3.2 Floors	331
11.3.3 Buildings	332
11.4 Fire-resistance Ratings	332
11.4.1 Verification methods	332
11.4.2 Fire severity	333
11.4.3 Listings	333
11.4.4 Failure criteria	333
11.4.5 Additive methods	335
11.4.6 Onset of char method	337
11.5 Properties of Gypsum Plaster Board	337
11.5.1 Manufacture	337

11.5.2	Types of gypsum board	338
11.5.3	Chemistry	339
11.5.4	Thermal properties	339
11.5.5	Fire resistance	341
11.5.6	Ablation	341
11.6	Temperatures Within Light Frame Assemblies	342
11.6.1	Typical temperatures	342
11.6.2	Insulation	343
11.6.3	Charring	343
11.6.4	Calculation	345
11.7	Structural Behaviour	346
11.7.1	Timber stud walls	347
11.7.2	Steel stud walls	351
11.7.3	Timber joist floors	353
11.7.4	Timber trusses	354
11.8	Design of Light Frame Structures in Fire	355
11.9	Construction Details	356
11.9.1	Insulating batts	356
11.9.2	Number of layers	357
11.9.3	Fixing of sheets	357
11.9.4	Resilient channels	358
11.9.5	Penetrations	360
11.9.6	Party walls	360
11.9.7	Fire stopping, junctions	361
11.9.8	Conflicting requirements	362
11.10	Lightweight Sandwich Panels	363
11.10.1	Description	363
11.10.2	Structural behaviour	363
11.10.3	Fire behaviour	363
11.10.4	Fire resistance	364
11.10.5	Design	365

12	Design Recommendations	367
12.1	Overview	367
12.2	Summary of Main Points	367
12.2.1	Fire exposure	367
12.2.2	Fire resistance	368
12.3	Summary for Main Materials	368
12.3.1	Structural steel	368
12.3.2	Reinforced concrete	369
12.3.3	Heavy timber	370
12.3.4	Light frame construction	370
12.4	Thermal Analysis	370
12.5	Conclusions	371
