PREFACE xvii

## CHAPTER 1

### Introduction to Bioproducts and Bioseparations 1

- 1.1 Instructional Objectives 3
- 1.2 Broad Classification of Bioproducts 3
- 1.3 Small Biomolecules 4
  - 1.3.1 Primary Metabolites 4
  - 1.3.2 Secondary Metabolites 11
  - 1.3.3 Summary of Small Biomolecules 12
- 1.4 Macromolecules: Proteins 14
  - 1.4.1 Primary Structure 14
  - 1.4.2 Secondary Structure 14
  - 1.4.3 Tertiary Structure 16
    - Example 1.1: Effect of a Reducing Agent on Protein Structure and Mobility* 17
  - 1.4.4 Quaternary Structure 18
  - 1.4.5 Prosthetic Groups and Hybrid Molecules 18
  - 1.4.6 Functions and Commercial Uses of Proteins 20
  - 1.4.7 Stability of Proteins 21
  - 1.4.8 Recombinant Protein Expression 25
- 1.5 Macromolecules: Nucleic Acids and Oligonucleotides 27
- 1.6 Macromolecules: Polysaccharides 29
- 1.7 Particulate Products 31
- 1.8 Introduction to Bioseparations: Engineering Analysis 31
  - 1.8.1 Stages of Downstream Processing 32
    - Example 1.2: Initial Selection of Purification Steps* 33
  - 1.8.2 Basic Principles of Engineering Analysis 34
  - 1.8.3 Process and Product Quality 35

- 1.8.4 Criteria for Process Development 36
- 1.9 The Route to Market 37
  - 1.9.1 The Chemical and Applications Range of the Bioproduct 38
  - 1.9.2 Documentation of Pharmaceutical Bioproducts 38
  - 1.9.3 GLP and cGMP 38
  - 1.9.4 Formulation 39
- 1.10 Summary 39
  - Nomenclature 40
  - Problems 40
  - References 41

## CHAPTER 2

### Analytical Methods 43

- 2.1 Instructional Objectives 43
- 2.2 Specifications 44
- 2.3 Assay Attributes 45
  - 2.3.1 Precision 45
  - 2.3.2 Accuracy 46
  - 2.3.3 Specificity 46
  - 2.3.4 Linearity, Limit of Detection, and Limit of Quantitation 47
  - 2.3.5 Range 48
  - 2.3.6 Robustness 48
- 2.4 Analysis of Biological Activity 49
  - 2.4.1 Animal Model Assays 49
  - 2.4.2 Cell-Line-Derived Bioassays 49
  - 2.4.3 *In Vitro* Biochemical Assays 50
    - Example 2.1: Coupled Enzyme Assay for Alcohol Oxidase* 50
- 2.5 Analysis of Purity 52
  - 2.5.1 Electrophoretic Analysis 52
    - Example 2.2: Estimation of the Maximum Temperature in an Electrophoresis Gel* 55
  - 2.5.2 High Performance Liquid Chromatography (HPLC) 67
  - 2.5.3 Mass Spectrometry 68
  - 2.5.4 Coupling of HPLC with Mass Spectrometry 69
  - 2.5.5 Ultraviolet Absorbance 69
    - Example 2.3: Determination of Molar Absorptivity* 70
  - 2.5.6 CHNO/Amino Acid Analysis (AAA) 71
    - Example 2.4: Calculations Based on CHNO Analysis* 71
  - 2.5.7 Protein Assays 72
  - 2.5.8 Enzyme-Linked Immunosorbent Assay 72
  - 2.5.9 Gas Chromatography 74
  - 2.5.10 DNA Hybridization 74
  - 2.5.11 ICP/MS (AA) 74
  - 2.5.12 Dry Weight 75

- 2.6 Microbiology Assays 75
  - 2.6.1 Sterility 75
  - 2.6.2 Bioburden 76
  - 2.6.3 Endotoxin 76
  - 2.6.4 Virus and Phage 76
- 2.7 Summary 77
  - Nomenclature 78
  - Problems 79
  - References 81

## CHAPTER 3

### Cell Lysis and Flocculation 83

- 3.1 Instructional Objectives 83
- 3.2 Some Elements of Cell Structure 84
  - 3.2.1 Prokaryotic Cells 84
  - 3.2.2 Eukaryotic Cells 85
- 3.3 Cell Lysis 86
  - 3.3.1 Osmotic and Chemical Cell Lysis 86
  - 3.3.2 Mechanical Methods of Lysis 88
- 3.4 Flocculation 92
  - 3.4.1 The Electric Double Layer 92
    - Example 3.1: Dependence of the Debye Radius on the Type of Electrolyte 95*
  - 3.4.2 Forces Between Particles and Flocculation by Electrolytes 96
    - Example 3.2: Sensitivity of Critical Flocculation Concentration to Temperature and Counterion Charge Number 97*
  - 3.4.3 The Schulze-Hardy Rule 98
  - 3.4.4 Flocculation Rate 98
  - 3.4.5 Polymeric Flocculants 99
- 3.5 Summary 101
  - Nomenclature 101
  - Problems 102
  - References 103

## CHAPTER 4

### Filtration 104

- 4.1 Instructional Objectives 105
- 4.2 Filtration Principles 105
  - 4.2.1 Conventional Filtration 106
    - Example 4.1: Batch Filtration 107*
  - 4.2.2 Crossflow Filtration 111
    - Example 4.2: Concentration Polarization in Ultrafiltration 114*

4.3	Filter Media and Equipment	117
4.3.1	Conventional Filtration	117
4.3.2	Crossflow Filtration	121
4.4	Membrane Fouling	124
4.5	Scaleup and Design of Filtration Systems	126
4.5.1	Conventional Filtration	126
	<i>Example 4.3: Rotary Vacuum Filtration</i>	126
	<i>Example 4.4: Washing of a Rotary Vacuum Filter Cake</i>	128
4.5.2	Crossflow Filtration	132
	<i>Example 4.5: Diafiltration Mode in Crossflow Filtration</i>	134
4.6	Summary	137
	Nomenclature	138
	Problems	139
	References	141

## CHAPTER 5 Sedimentation 142

5.1	Instructional Objectives	142
5.2	Sedimentation Principles	143
5.2.1	Equation of Motion	143
5.2.2	Sensitivities	144
5.3	Methods and Coefficients	146
5.3.1	Equilibrium Sedimentation	146
5.3.2	Sedimentation Coefficient	147
	<i>Example 5.1: Application of the Sedimentation Coefficient</i>	147
5.3.3	Equivalent Time	148
	<i>Example 5.2: Scaleup Based on Equivalent Time</i>	148
5.3.4	Sigma Analysis	149
5.4	Production Centrifuges: Comparison and Engineering Analysis	149
5.4.1	Tubular Bowl Centrifuge	150
	<i>Example 5.3: Complete Recovery of Bacterial Cells in a Tubular Bowl Centrifuge</i>	153
5.4.2	Disk Centrifuge	153
5.5	Ultracentrifugation	156
5.5.1	Determination of Molecular Weight	156
5.6	Flocculation and Sedimentation	157
5.7	Sedimentation at Low Accelerations	158
5.7.1	Diffusion, Brownian Motion	158
5.7.2	Isothermal Settling	159
5.7.3	Convective Motion and Péclet Analysis	159
5.7.4	Inclined Sedimentation	159
5.7.5	Field-Flow Fractionation	161
5.8	Centrifugal Elutriation	162

- 5.9 Summary 162
- Nomenclature 164
- Problems 165
- References 167

## CHAPTER 6

### Extraction 169

- 6.1 Instructional Objectives 169
- 6.2 Extraction Principles 170
  - 6.2.1 Phase Separation and Partitioning Equilibria 170
  - 6.2.2 Countercurrent Stage Calculations 175
    - Example 6.1: Separation of a Bioproduct and an Impurity by Countercurrent Extraction* 179
    - Example 6.2: Effect of Solvent Rate in Countercurrent Staged Extraction of an Antibiotic* 180
- 6.3 Scaleup and Design of Extractors 181
  - 6.3.1 Reciprocating-Plate Extraction Columns 182
    - Example 6.3: Scaleup of a Reciprocating-Plate Extraction Column* 184
  - 6.3.2 Centrifugal Extractors 185
- 6.4 Summary 186
  - Nomenclature 187
  - Problems 188
  - References 189

## CHAPTER 7

### Liquid Chromatography and Adsorption 191

- 7.1 Instructional Objectives 193
- 7.2 Adsorption Equilibrium 193
- 7.3 Adsorption Column Dynamics 195
  - 7.3.1 Fixed-Bed Adsorption 196
    - Example 7.1: Determination of the Mass Transfer Coefficient from Adsorption Breakthrough Data* 200
  - 7.3.2 Agitated-Bed Adsorption 201
- 7.4 Chromatography Column Dynamics 203
  - 7.4.1 Plate Models 203
  - 7.4.2 Chromatography Column Mass Balance with Negligible Dispersion 204
    - Example 7.2: Chromatographic Separation of Two Solutes* 205
    - Example 7.3: Calculation of the Shock Wave Velocity for a Nonlinear Isotherm* 206
    - Example 7.4: Calculation of the Elution Profile* 207
  - 7.4.3 Dispersion Effects in Chromatography 209
  - 7.4.4 Gradients and Modifiers 213
    - Example 7.5: Equilibrium for a Protein Anion in the Presence of Chloride Ion* 213

7.5	Adsorbent Types	215
7.5.1	Silica-Based Resins	215
7.5.2	Polymer-Based Resins	216
7.5.3	Ion Exchange Resins	217
7.5.4	Reversed-Phase Chromatography	218
7.5.5	Hydrophobic Interaction Chromatography	218
7.5.6	Affinity Chromatography	219
7.5.7	Immobilized Metal Affinity Chromatography (IMAC)	219
7.5.8	Size Exclusion Chromatography	219
7.6	Particle Size and Pressure Drop in Fixed Beds	220
7.7	Equipment	221
7.7.1	Columns	221
7.7.2	Chromatography Column Packing Procedures	222
7.7.3	Detectors	223
7.7.4	Chromatography System Fluidics	223
7.8	Scaleup	224
7.8.1	Adsorption	224
	<i>Example 7.6: Scaleup of the Fixed-Bed Adsorption of a Pharmaceutical Product</i>	226
7.8.2	Chromatography	230
	<i>Example 7.7: Scaleup of a Protein Chromatography</i>	231
	<i>Example 7.8: Scaleup of a Protein Chromatography Using Standard Column Sizes</i>	232
	<i>Example 7.9: Scaleup of Elution Buffer Volumes in Protein Chromatography</i>	233
	<i>Example 7.10: Consideration of Pressure Drop in Column Scaling</i>	233
7.9	Summary	234
	Nomenclature	236
	Problems	238
	References	241

## CHAPTER 8

### Precipitation 243

8.1	Instructional Objectives	243
8.2	Protein Solubility	244
8.2.1	Structure and Size	244
8.2.2	Charge	245
8.2.3	Solvent	246
	<i>Example 8.1: Salting Out of a Protein with Ammonium Sulfate</i>	249
8.3	Precipitate Formation Phenomena	249
8.3.1	Initial Mixing	250
8.3.2	Nucleation	250
8.3.3	Growth Governed by Diffusion	251
	<i>Example 8.2: Calculation of Concentration of Nuclei in a Protein Precipitation</i>	252

<i>Example 8.3: Diffusion-Limited Growth of Particles</i>	254
8.3.4 Growth Governed by Fluid Motion	255
<i>Example 8.4: Growth of Particles Limited by Fluid Motion</i>	255
8.3.5 Precipitate Breakage	256
8.3.6 Precipitate Aging	257
8.4 Particle Size Distribution in a Continuous Flow Stirred Tank Reactor	258
<i>Example 8.5: Dependence of Population Density on Particle Size and Residence Time in a CSTR</i>	261
8.5 Methods of Precipitation	261
8.6 Design of Precipitation Systems	264
8.7 Summary	266
Nomenclature	268
Problems	269
References	271

## CHAPTER 9

### Crystallization 272

9.1 Instructional Objectives	273
9.2 Crystallization Principles	273
9.2.1 Crystals	273
9.2.2 Nucleation	274
9.2.3 Crystal Growth	275
9.2.4 Crystallization Kinetics from Batch Experiments	276
9.3 Batch Crystallizers	277
9.3.1 Analysis of Dilution Batch Crystallization	278
<i>Example 9.1: Batch Crystallization with Constant Rate of Change of Diluent Concentration</i>	279
9.4 Process Crystallization of Proteins	281
9.5 Crystallizer Scaleup and Design	282
9.5.1 Experimental Crystallization Studies as a Basis for Scaleup	282
9.5.2 Scaleup and Design Calculations	284
<i>Example 9.2: Scaleup of Crystallization Based on Constant Power per Volume</i>	284
9.6 Summary	285
Nomenclature	286
Problems	287
References	288

## CHAPTER 10

### Drying 290

10.1 Instructional Objectives	290
10.2 Drying Principles	291
10.2.1 Water in Biological Solids and in Gases	291
<i>Example 10.1: Drying of Antibiotic Crystals</i>	294

10.2.2	Heat and Mass Transfer	295
	<i>Example 10.2: Conductive Drying of Wet Solids in a Tray</i>	296
	<i>Example 10.3: Mass Flux During the Constant Rate Drying Period in Convective Drying</i>	302
	<i>Example 10.4: Time to Dry Nonporous Biological Solids by Convective Drying</i>	302
10.3	Dryer Description and Operation	303
10.3.1	Vacuum-Shelf Dryers	303
10.3.2	Batch Vacuum Rotary Dryers	304
10.3.3	Freeze Dryers	305
10.3.4	Spray Dryers	307
10.4	Scaleup and Design of Drying Systems	308
10.4.1	Vacuum-Shelf Dryers	308
10.4.2	Batch Vacuum Rotary Dryers	308
10.4.3	Freeze Dryers	309
10.4.4	Spray Dryers	310
	<i>Example 10.5: Sizing of a Spray Dryer</i>	311
10.5	Summary	314
	Nomenclature	315
	Problems	315
	References	317

## CHAPTER 11

### **Bioprocess Design** 319

11.1	Instructional Objectives	319
11.2	Definitions and Background	320
11.3	Synthesis of Bioseparation Processes	322
11.3.1	Primary Recovery Stages	322
11.3.2	Intermediate Recovery Stages	326
11.3.3	Final Purification Stages	327
11.3.4	Pairing of Unit Operations in Process Synthesis	328
11.4	Process Analysis	329
11.4.1	Spreadsheets	329
11.4.2	Process Simulators	330
11.4.3	Using a Biochemical Process Simulator	330
11.5	Process Economics	334
11.5.1	Capital Cost Estimation	334
11.5.2	Operating Cost Estimation	338
11.5.3	Profitability Analysis	342
11.6	Illustrative Examples	343
11.6.1	Citric Acid Production	343
11.6.2	Human Insulin Production	349
11.6.3	Therapeutic Monoclonal Antibody Production	362
11.7	Summary	368
	Problems	369
	References	371

## **CHAPTER 12**

### **Laboratory Exercises in Bioseparations 373**

- 12.1 Flocculant Screening 373
  - 12.1.1 Background 373
  - 12.1.2 Objectives 374
  - 12.1.3 Procedure 374
  - 12.1.4 Report 375
  - 12.1.5 Some Notes and Precautions 375
- 12.2 Crossflow Filtration 376
  - 12.2.1 Background 376
  - 12.2.2 Objectives 376
  - 12.2.3 Procedure 376
  - 12.2.4 Report 377
- 12.3 Centrifugation of Flocculated and Unflocculated Particulates 377
  - 12.3.1 Background 378
  - 12.3.2 Objectives 378
  - 12.3.3 Procedure 379
  - 12.3.4 Report 379
- 12.4 Aqueous Two-Phase Extraction 381
  - 12.4.1 Physical Measurements 381
  - 12.4.2 Procedure 382
  - 12.4.3 Calculations and Report 384
  - 12.4.4 Inverse Lever Rule 385
- 12.5 Chromatography Scaleup 386
  - 12.5.1 Background 386
  - 12.5.2 Objectives 386
  - 12.5.3 Procedure 386
  - 12.5.4 Report 389
  - References 391

## **APPENDIX**

### **Table of Units and Constants 392**

### **INDEX 395**
