VOLUME 3: Fuel Cell Technology and Applications, Part 1

Contributors to Volumes 3 and 4	ix		
Foreword	xv		
Preface	xix		
Abbreviations and Acronyms	xxi		
Part 1: Sustainable energy supply	1		
1 Alternative fuels and prospects – Overview <i>J. M. Ogden</i>	3	13 Mixed POX/steam-reforming reactor design considerations <i>J. Reinkingh/M. Petch</i>	149
2 Natural gas for power generation and the automotive market <i>T. Theisen</i>	25	Fuel processing from hydrocarbons to hydrogen	157
3 Methanol from fossil and renewable resources <i>R. Edinger/G. Isenberg/B. Höhlelein</i>	39	14 Steam reforming, ATR, partial oxidation: catalysts and reaction engineering <i>J. R. Rostrup-Nielsen/K. Aasberg-Petersen</i>	159
4 Synthetic hydrocarbons as long-term fuel option <i>J. G. Price/B. Jager/L. Dancuart/M. J. Keyser/J. van der Walt</i>	49	15 Sulfur removal methods <i>A. Hidalgo-Vivas/B. H. Cooper</i>	177
5 Solar and wind energy coupled with electrolysis and fuel cells <i>R. Wurster/J. Schindler</i>	62	16 Catalyst development for water-gas shift <i>J. R. Ladebeck/J. P. Wagner</i>	190
		17 Membrane reactor concepts <i>S. Wieland/T. Melin</i>	202
Part 2: Hydrogen storage and hydrogen generation	79	18 PROX catalysts <i>L. Shore/R. J. Farrauto</i>	211
Development prospects for hydrogen storage	81	19 Autothermal reforming <i>F. Baumann/S. Wieland/M. Himmen/D. W. Agar</i>	219
6 High pressure storage <i>R. Funck</i>	83	20 Alternative design possibilities for integrated fuel processors <i>G. E. Voecks</i>	229
7 Liquid hydrogen technology for vehicles <i>J. Wolf</i>	89	Well-to-wheel efficiencies	243
8 Hydride storage <i>G. Sandrock</i>	101	21 Well-to-wheel efficiencies of different fuel choices <i>B. Höhlelein/G. Isenberg/R. Edinger/T. Grube</i>	245
Chemical hydrogen storage devices	113	Hydrogen safety, codes and standards	255
9 Aqueous borohydride solutions <i>S. Suda</i>	115	22 Hydrogen safety, codes and standards for vehicles and stationary applications <i>G. Scheffler/R. Wurster/J. Schindler</i>	257
10 Ammonia crackers <i>V. Hacker/K. Kordesch</i>	121		
Reforming of methanol and fuel processor development	129	Part 3: Polymer electrolyte membrane fuel cells and systems (PEMFC)	269
11 Catalyst development and kinetics for methanol fuel processing <i>B. A. Peppley/J. C. Amphlett/R. F. Mann</i>	131	Bipolar plate materials and flow field design	271
12 Methanol reformer design considerations <i>J. B. Hansen</i>	141	23 Basic materials corrosion issues <i>D. A. Shores/G. A. Deluga</i>	273
		24 Performance and durability of bipolar plate materials <i>G. O. Mepsted/J. M. Moore</i>	286

25	Metal bipolar plates and coatings <i>J. Wind/A. LaCroix/S. Braeuninger/P. Hedrich/C. Heller/ M. Schudy</i>	294	39	Development of CO-tolerant catalysts <i>K. Ruth/M. Vogt/R. Zuber</i>	489
26	Graphite-based bipolar plates <i>K. Roßberg/V. Trapp</i>	308	40	Manufacture of electrocatalyst powders by a spray-based production platform <i>M. Hampden-Smith/P. Atanassova/P. Atanassov/T. Kodas</i>	497
27	Serpentine flow field design <i>D. P. Wilkinson/O. Vanderleeden</i>	315	41	Precious metal supply requirements <i>C. Jaffray/G. Hards</i>	509
28	Interdigitated flow field design <i>T. V. Nguyen/W. He</i>	325			
29	Two-phase flow and transport <i>C.-Y. Wang</i>	337			
Membrane materials		349	Membrane-electrode-assembly (MEA)		515
30	Perfluorinated membranes <i>M. Doyle/G. Rajendran</i>	351	42	Diffusion media materials and characterisation <i>M. F. Mathias/J. Roth/J. Fleming/W. Lehnert</i>	517
31	First principles modeling of sulfonic acid based ionomer membranes <i>S. J. Paddison</i>	396	43	Principles of MEA preparation <i>S. S. Kocha</i>	538
32	Composite perfluorinate membranes <i>M. Nakao/M. Yoshitake</i>	412	44	Catalyst coated composite membranes <i>S. Cleghorn/J. Kolde/W. Liu</i>	566
33	Hydrocarbon membranes <i>K. D. Kreuer</i>	420	45	Novel catalysts, catalysts support and catalysts coated membrane methods <i>M. K. Debe</i>	576
34	High-temperature membranes <i>J. S. Wainright/M. H. Litt/R. F. Savinell</i>	436	State-of-the-art performance and durability		591
35	Inorganic/organic composite membranes <i>D. J. Jones/J. Rozière</i>	447	46	Beginning-of-life MEA performance – Efficiency loss contributions <i>H. A. Gasteiger/W. Gu/R. Makharia/M. F. Mathias/ B. Sompalli</i>	593
36	Membrane/electrode additives for low-humidification operation <i>J.-C. Lin/H. R. Kunz/J. M. Fenton</i>	456	47	Durability <i>D. P. Wilkinson/J. St-Pierre</i>	611
Electro-catalysts		465	48	Effect of ionic contaminants <i>T. Okada</i>	627
37	Pt alloys as oxygen reduction catalysts <i>D. Thompsett</i>	467	49	Mechanisms of membrane degradation <i>A. B. LaConti/M. Hamdan/R. C. McDonald</i>	647
38	High dispersion catalysts including novel carbon supports <i>T. Tada</i>	481	50	Reliability issues and voltage degradation <i>M. Fowler/R. F. Mann/J. C. Amphlett/B. A. Peppley/ P. R. Roberge</i>	663
