

Sixth
Edition

Analytical Chemistry

FIRST AID

A NEW book contains
FREE access to essential
CD-based resources
for a better grade!

Gary D. Christian

Contents

Chapter 1 Analytical Objectives, or: What Analytical Chemists Do 1

- 1.1 What Is Analytical Science?, 1
- 1.2 Qualitative and Quantitative Analysis:
What Does Each Tell Us?, 2
- 1.3 Getting Started: The Analytical Process, 5
- 1.4 Validation of a Method—You Have to Prove
It Works!, 14
- 1.5 Range—What Size Sample?, 14
- 1.6 Some Useful Websites, 15

Chapter 2 Basic Tools and Operations of Analytical Chemistry 20

- 2.1 The Laboratory Notebook—Your Critical
Record, 21
- 2.2 Laboratory Materials and Reagents, 23
- 2.3 The Analytical Balance—The Indispensable
Tool, 24
- 2.4 Volumetric Glassware—
Also Indispensable, 32
- 2.5 Preparation of Standard Base Solutions, 43
- 2.6 Preparation of Standard Acid Solutions, 44
- 2.7 Other Apparatus—Handling and Treating
Samples, 44
- 2.8 Igniting Precipitates—Gravimetric
Analysis, 51
- 2.9 Obtaining the Sample—Is It Solid, Liquid,
or Gas?, 52
- 2.10 Operations of Drying and Preparing a
Solution of the Analyte, 53
- 2.11 Laboratory Safety, 60

Chapter 3 Data Handling and Spreadsheets in Analytical Chemistry 65

- 3.1 Accuracy and Precision: There Is a
Difference, 65
- 3.2 Determinate Errors—They Are
Systematic, 66
- 3.3 Indeterminate Errors—They Are
Random, 67
- 3.4 Significant Figures: How Many Numbers
Do You Need?, 68
- 3.5 Rounding Off, 73
- 3.6 Ways of Expressing Accuracy, 73
- 3.7 Standard Deviation—The Most Important
Statistic, 74
- 3.8 Use of Spreadsheets in Analytical
Chemistry, 78
- 3.9 Propagation of Errors—Not Just
Additive, 82
- 3.10 Significant Figures and Propagation
of Error, 88
- 3.11 Control Charts, 89
- 3.12 The Confidence Limit—
How Sure Are You?, 90
- 3.13 Tests of Significance—Is There a
Difference?, 92
- 3.14 Rejection of a Result: The Q Test, 98
- 3.15 Statistics for Small Data Sets, 100
- 3.16 Linear Least Squares—How to Plot the
Right Straight Line, 102
- 3.17 Correlation Coefficient and Coefficient of
Determination, 106
- 3.18 Using Spreadsheets for Plotting Calibration
Curves, 107

- 3.19 Slope, Intercept and Coefficient of Determination, 110
- 3.20 LINEST for Additional Statistics, 110
- 3.21 Statistics Software Packages, 111
- 3.22 Detection Limits—There Is No Such Thing as Zero, 111
- 3.23 Statistics of Sampling—How Many, How Large?, 113

Chapter 4 **Good Laboratory Practice:** **Quality Assurance of Analytical Measurements** **124**

- 4.1 What Is Good Laboratory Practice?, 125
- 4.2 Validation of Analytical Methods, 126
- 4.3 Quality Assurance—Does the Method Still Work?, 133
- 4.4 Laboratory Accreditation, 134
- 4.5 Electronic Records and Electronic Signatures: 21 CFR, Part 11, 135
- 4.6 Some Official Organizations, 136

Chapter 5 **Stoichiometric Calculations:** **The Workhorse of the Analyst** **141**

- 5.1 Review of the Fundamentals, 141
- 5.2 How Do We Express Concentrations of Solutions?, 144
- 5.3 Expressions of Analytical Results—So Many Ways, 152
- 5.4 Volumetric Analysis: How Do We Make Stoichiometric Calculations?, 158
- 5.5 Volumetric Calculations—Let's Use Molarity, 160
- 5.6 Normality—A Different Way to do Volumetric Calculations, 172
- 5.7 Titer—How to Make Rapid Routine Calculations, 179
- 5.8 Weight Relationships—You Need These for Gravimetric Calculations, 180

Chapter 6 **General Concepts of Chemical Equilibrium** **189**

- 6.1 Chemical Reactions: The Rate Concept, 189
- 6.2 Types of Equilibria, 191

- 6.3 Gibbs Free Energy and the Equilibrium Constant, 191
- 6.4 Le Châtelier's Principle, 192
- 6.5 Temperature Effects on Equilibrium Constants, 193
- 6.6 Pressure Effects on Equilibria, 193
- 6.7 Effect of Concentrations on Equilibria, 193
- 6.8 Catalysts, 193
- 6.9 Completeness of Reactions, 194
- 6.10 Equilibrium Constants for Dissociating or Combining Species—Weak Electrolytes and Precipitates, 194
- 6.11 Calculations Using Equilibrium Constants—How Much Is in Equilibrium?, 195
- 6.12 The Common Ion Effect—Shifting the Equilibrium, 202
- 6.13 Systematic Approach to Equilibrium Calculations—How to Solve Any Equilibrium Problem, 203
- 6.14 Heterogeneous Equilibria—Solids Don't Count, 209
- 6.15 Activity and Activity Coefficients—Concentration Is Not the Whole Story, 210
- 6.16 The Diverse Ion Effect: The Thermodynamic Equilibrium Constant and Activity Coefficients, 214

Chapter 7 **Acid–Base Equilibria** **219**

- 7.1 Acid–Base Theories—Not All Are Created Equal, 219
- 7.2 Acid–Base Equilibria in Water, 221
- 7.3 The pH Scale, 224
- 7.4 pH at Elevated Temperatures: Blood pH, 227
- 7.5 Weak Acids and Bases—What Is the pH?, 228
- 7.6 Salts of Weak Acids and Bases—They Aren't Neutral, 230
- 7.7 Buffers—Keeping the pH Constant (or Nearly So), 234
- 7.8 Polyprotic Acids and Their Salts, 241
- 7.9 Physiological Buffers—They Keep You Alive, 251
- 7.10 Buffers for Biological and Clinical Measurements, 253
- 7.11 The Diverse Ion Effect on Acids and Bases: K_a^0 and K_b^0 —Salts Change the pH, 254
- 7.12 Logarithmic Concentration Diagrams—How to View Large Concentration Changes, 255

Chapter 8 Acid–Base Titrations

266

- 8.1 Strong Acid versus Strong Base—
The Easy Titrations, 266
- 8.2 Detection of the End Point: Indicators, 270
- 8.3 Standard Acid and Base Solutions, 272
- 8.4 Weak Acid versus Strong Base—A Bit Less
Straightforward, 272
- 8.5 Weak Base versus Strong Acid, 278
- 8.6 Titration of Sodium Carbonate—A Diprotic
Base, 279
- 8.7 Titration of Polyprotic Acids, 281
- 8.8 Mixtures of Acids or Bases, 284
- 8.9 Titration of Amino Acids—They Are Acids
and Bases, 286
- 8.10 Kjeldahl Analysis:
Protein Determination, 287

Chapter 9 Complexometric Reactions and Titrations

294

- 9.1 Complexes and Formation Constants—
How Stable Are Complexes?, 294
- 9.2 Chelates: EDTA—The Ultimate Titrating
Agent for Metals, 297
- 9.3 Metal–EDTA Titration Curves, 303
- 9.4 Detection of the End Point: Indicators—
They Are Chelating Agents, 305
- 9.5 Other Uses of Complexes, 307
- 9.6 Fraction of Dissociating Species in Polyligand
Complexes: β Values—How Much of Each
Species?, 308

Chapter 10 Gravimetric Analysis and Precipitation Equilibria

313

- 10.1 How to Perform a Successful Gravimetric
Analysis, 313
- 10.2 Gravimetric Calculations—How Much
Analyte Is There?, 320
- 10.3 Examples of Gravimetric Analysis, 324
- 10.4 Organic Precipitates, 325
- 10.5 Precipitation Equilibria: The Solubility
Product, 326
- 10.6 The Diverse Ion Effect on Solubility: K_{sp}°
and Activity Coefficients, 332

Chapter 11 Precipitation Reactions and Titrations

339

- 11.1 Effect of Acidity on Solubility of
Precipitates: The Conditional Solubility
Product, 339
- 11.2 Mass Balance Approach for Multiple
Equilibria, 341
- 11.3 Effect of Complexation on Solubility:
Conditional Solubility Product, 345
- 11.4 Precipitation Titrations, 346

Chapter 12 Electrochemical Cells and Electrode Potentials

354

- 12.1 What Are Redox Reactions?, 354
- 12.2 Electrochemical Cells—What
Electroanalytical Chemists Use, 355
- 12.3 Nernst Equation—Effects of Concentrations
on Potentials, 361
- 12.4 Formal Potential—Use It for Defined
Nonstandard Solution Conditions, 365
- 12.5 Limitations of Electrode Potentials, 366

Chapter 13 Potentiometric Electrodes and Potentiometry

369

- 13.1 Metal Electrodes for Measuring the
Metal's Cation, 369
- 13.2 Metal–Metal Salt Electrodes for Measuring
the Salt's Anion, 371
- 13.3 Redox Electrodes—Inert Metals, 373
- 13.4 Voltaic Cells without Liquid Junction—
For Maximum Accuracy, 374
- 13.5 Voltaic Cells with Liquid Junction—The
Practical Kind, 375
- 13.6 Reference Electrodes: The Saturated
Calomel Electrode, 378
- 13.7 Measurement of Potential, 380
- 13.8 Determination of Concentrations from
Potential Measurements, 382
- 13.9 Residual Liquid-Junction Potential—
It Should Be Minimum, 382
- 13.10 Accuracy of Direct Potentiometric
Measurements—Voltage Error versus
Activity Error, 383
- 13.11 Glass pH Electrode—Workhorse of
Chemists, 384

- 13.12 Standard Buffers—Reference for pH Measurements, 389
- 13.13 Accuracy of pH Measurements, 391
- 13.14 Using the pH Meter—How Does It Work?, 391
- 13.15 pH Measurement of Blood—Temperature Is Important, 393
- 13.16 pH Measurements in Nonaqueous Solvents, 394
- 13.17 Ion-Selective Electrodes, 395
- 13.18 Solid-State ISFET Electrodes, 408

Chapter 14

Redox and Potentiometric Titrations **414**

- 14.1 First: Balance the Reduction—Oxidation Reaction, 414
- 14.2 Calculation of the Equilibrium Constant of a Reaction—Needed to Calculate Equivalence Point Potentials, 415
- 14.3 Calculating Redox Titration Curves, 418
- 14.4 Visual Detection of the End Point, 422
- 14.5 Titrations Involving Iodine: Iodimetry and Iodometry, 423
- 14.6 Titrations with Other Oxidizing Agents, 429
- 14.7 Titrations with Other Reducing Agents, 430
- 14.8 Preparing the Solution—Getting the Analyte in the Right Oxidation State before Titration, 431
- 14.9 Potentiometric Titrations (Indirect Potentiometry), 433

Chapter 15

Voltammetry and Electrochemical Sensors **446**

- 15.1 Voltammetry, 446
- 15.2 Amperometric Electrodes—Measurement of Oxygen, 451
- 15.3 Electrochemical Sensors: Chemically Modified Electrodes, 452
- 5.4 Ultramicroelectrodes, 454

Chapter 16

Spectrochemical Methods **457**

- 16.1 Interaction of Electromagnetic Radiation with Matter, 458

- 16.2 Electronic Spectra and Molecular Structure, 464
- 16.3 Infrared Absorption and Molecular Structure, 469
- 16.4 Near-Infrared Spectrometry for Nondestructive Testing, 470
- 16.5 Spectral Databases—Identifying Unknowns, 472
- 16.6 Solvents for Spectrometry, 473
- 16.7 Quantitative Calculations, 474
- 16.8 Spectrometric Instrumentation, 483
- 16.9 Types of Instruments, 495
- 16.10 Diode Array Spectrometers—Getting the Entire Spectrum at Once, 498
- 16.11 Fourier Transform Infrared Spectrometers, 499
- 16.12 Near-IR Instruments, 501
- 16.13 Spectrometric Error in Measurements, 501
- 16.14 Deviation from Beer's Law, 503
- 16.15 Fluorometry, 505
- 16.16 Optical Sensors: Fiber Optics, 511

Chapter 17

Atomic Spectrometric Methods **522**

- 17.1 Flame Emission Spectrometry, 522
- 17.2 Distribution between Ground and Excited States—Most Atoms Are in the Ground State, 524
- 17.3 Atomic Absorption Spectrophotometry, 525
- 17.4 Internal Standard and Standard Addition Calibration, 533

Chapter 18

Sample Preparation: Solvent and Solid-Phase Extraction **541**

- 18.1 Distribution Coefficient, 541
- 18.2 Distribution Ratio, 542
- 18.3 Percent Extracted, 543
- 18.4 Solvent Extraction of Metals, 544
- 18.5 Accelerated and Microwave-Assisted Extraction, 546
- 18.6 Solid-Phase Extraction, 547

Chapter 19 **Chromatography: Principles and Theory** **555**

- 19.1 Principles of Chromatographic Separations, 556
- 19.2 Classifications of Chromatographic Techniques, 558
- 19.3 Theory of Column Efficiency in Chromatography, 560
- 19.4 Chromatography Simulation Software, 570
- 19.5 Freebies: Company Searchable Chromatogram Databases, 571

Chapter 20 **Gas Chromatography** **574**

- 20.1 Performing GC Separations, 574
- 20.2 Gas Chromatography Columns, 577
- 20.3 Gas Chromatography Detectors, 584
- 20.4 Temperature Selection, 587
- 20.5 Quantitative Measurements, 589
- 20.6 Headspace Analysis, 590
- 20.7 Thermal Desorption, 591
- 20.8 Purging and Trapping, 591
- 20.9 Small and Fast, 592
- 20.10 Gas Chromatography—Mass Spectrometry, 593

Chapter 21 **Liquid Chromatography** **604**

- 21.1 High Performance Liquid Chromatography, 604
- 21.2 Size Exclusion Chromatography, 620
- 21.3 Ion Exchange Chromatography, 622
- 21.4 Ion Chromatography, 625
- 21.5 Thin-Layer Chromatography, 627
- 21.6 Electrophoresis, 631
- 21.7 Capillary Electrophoresis, 632

Chapter 22 **Kinetic Methods of Analysis** **643**

- 22.1 Kinetics—The Basics, 643
- 22.2 Enzyme Catalysis, 646

Chapter 23 **Automation in Measurements** **660**

- 23.1 Principles of Automation, 660
- 23.2 Automated Instruments: Process Control, 661
- 23.3 Automatic Instruments, 664
- 23.4 Flow Injection Analysis, 665
- 23.5 Microprocessors and Computers, 674

Chapter 24 **Clinical Chemistry** **678**

- 24.1 Composition of Blood, 678
- 24.2 Collection and Preservation of Samples, 680
- 24.3 Clinical Analyses—Common Determinations, 681
- 24.4 Immunoassay, 683

Chapter 25 **Century of the Gene—** **Genomics and Proteomics:** **DNA Sequencing and Protein Profiling** **693**

- 25.1 Of What Are We Made?, 693
- 25.2 What Is DNA?, 695
- 25.3 Human Genome Project, 695
- 25.4 How Are Genes Sequenced?, 697
- 25.5 Replicating DNA: The Polymerase Chain Reaction, 697
- 25.6 Plasmids and Bacterial Artificial Chromosomes, 699
- 25.7 DNA Sequencing, 700
- 25.8 Whole Genome Shotgun Sequencing, 703
- 25.9 Single-Nucleotide Polymorphisms, 703
- 25.10 DNA Chips, 704
- 25.11 Draft Genome, 705
- 25.12 Genomes and Proteomics: The Rest of the Story, 705

Chapter 26 **Environmental Sampling and Analysis** **712**

- 26.1 Getting a Meaningful Sample, 712
- 26.2 Air Sample Collection and Analysis, 713

- 26.3 Water Sample Collection and Analysis, 720
- 26.4 Soil and Sediment Sampling, 722
- 26.5 Sample Preparation for Trace Organics, 722
- 26.6 Contaminated Land Sites—What Needs to Be Analyzed?, 723
- 26.7 EPA Methods and Performance-based Analyses, 723

EXPERIMENTS

727

USE OF APPARATUS

- Experiment 1 Use of the Analytical Balance, 727
- Experiment 2 Use of the Pipet and Buret and Statistical Analysis, 729

GRAVIMETRY

- Experiment 3 Gravimetric Determination of Chloride, 730
- Experiment 4 Gravimetric Determination of SO_3 in a Soluble Sulfate, 733
- Experiment 5 Gravimetric Determination of Nickel in a Nichrome Alloy, 735

ACID—BASE TITRATIONS

- Experiment 6 Determination of Replaceable Hydrogen in Acid by Titration with Sodium Hydroxide, 736
- Experiment 7 Determination of Total Alkalinity of Soda Ash, 738
- Experiment 8 Determination of Bicarbonate in Blood Using Back-Titration, 740

COMPLEXOMETRIC TITRATION

- Experiment 9 Determination of Water Hardness with EDTA, 742

PRECIPITATION TITRATIONS

- Experiment 10 Determination of Silver in an Alloy: Volhard's Method, 744
- Experiment 11 Determination of Chloride in a Soluble Chloride: Fajans' Method, 745

POTENTIOMETRIC MEASUREMENTS

- Experiment 12 Determination of the pH of Hair Shampoos, 746
- Experiment 13 Potentiometric Determination of Fluoride in Drinking Water Using a Fluoride Ion-Selective Electrode, 748

REDUCTION—OXIDATION TITRATIONS

- Experiment 14 Analysis of an Iron Alloy or Ore by Titration with Potassium Dichromate, 750
- Experiment 15 Analysis of Commercial Hypochlorite or Peroxide Solution by Iodometric Titration, 753
- Experiment 16 Iodometric Determination of Copper, 755
- Experiment 17 Determination of Antimony by Titration with Iodine, 757
- Experiment 18 Microscale Quantitative Analysis of Hard Water Samples Using an Indirect Potassium Permanganate Redox Titration, 759

POTENTIOMETRIC TITRATIONS

- Experiment 19 pH Titration of Unknown Soda Ash, 762
- Experiment 20 Potentiometric Titration of a Mixture of Chloride and Iodide, 763

SPECTROCHEMICAL MEASUREMENTS

- Experiment 21 Spectrophotometric Determination of Iron, 765
- Experiment 22 Determination of Nitrate Nitrogen in Water, 766
- Experiment 23 Spectrophotometric Determination of Lead on Leaves Using Solvent Extraction, 767
- Experiment 24 Spectrophotometric Determination of Inorganic Phosphorus in Serum, 769
- Experiment 25 Spectrophotometric Determination of Manganese and Chromium in Mixture, 770
- Experiment 26 Ultraviolet Spectrophotometric Determination of Aspirin, Phenacetin, and Caffeine in APC Tablets Using Solvent Extraction, 773
- Experiment 27 Infrared Determination of a Mixture of Xylene Isomers, 774
- Experiment 28 Fluorometric Determination of Riboflavin (Vitamin B_2), 775

ATOMIC SPECTROMETRY MEASUREMENTS

- Experiment 29 Determination of Calcium by Atomic Absorption Spectrophotometry, 776
- Experiment 30 Flame Emission Spectrometric Determination of Sodium, 778

CHROMATOGRAPHY

- Experiment 31 Thin-Layer Chromatography Separation of Amino Acids, 780
- Experiment 32 Gas Chromatographic Analysis of a Tertiary Mixture, 781
- Experiment 33 Qualitative and Quantitative Analysis of Fruit Juices for Vitamin C Using High-Performance Liquid Chromatography, 783
- Experiment 34 Analysis of Analgesics Using High-Performance Liquid Chromatography, 784

KINETIC ANALYSIS

- Experiment 35 Enzymatic Determination of Glucose in Blood, 785

FLOW INJECTION ANALYSIS

- Experiment 36 Characterization of Physical Parameters of a Flow Injection Analysis System, 786
- Experiment 37 Single-Line FIA: Spectrophotometric Determination of Chloride, 789
- Experiment 38 Three-Line FIA: Spectrophotometric Determination of Phosphate, 790

TEAM EXPERIMENTS

- Experiment 39 Method Validation and Quality Control Study, 793

Experiment 40 Proficiency Testing: Determination of z Values of Class Experiments, 795

APPENDIX A LITERATURE OF ANALYTICAL CHEMISTRY 796

APPENDIX B REVIEW OF MATHEMATICAL OPERATIONS: EXPONENTS, LOGARITHMS, AND THE QUADRATIC FORMULA 800

APPENDIX C TABLES OF CONSTANTS 804

- Table C.1 Dissociation Constants for Acids, 804
- Table C.2 Dissociation Constants for Bases, 805
- Table C.3 Solubility Product Constants, 806
- Table C.4 Formation Constants for Some EDTA Metal Chelates, 807
- Table C.5 Some Standard and Formal Reduction Electrode Potentials, 808

APPENDIX D SAFETY IN THE LABORATORY 810

APPENDIX E PERIODIC TABLES ON THE WEB 811

APPENDIX F ANSWERS TO EVEN-NUMBERED PROBLEMS 812

INDEX 818
