

# Multifunctional Cement-Based Materials

Deborah D. L. Chung

# Contents

<i>Preface</i>	v
<b>1 Introduction to Cement-Based Materials</b>	<b>1</b>
1.1 Background on cement-based materials	1
1.2 Improving cement-based materials by using silica fume	3
1.2.1 Introduction	3
1.2.2 Workability	4
1.2.3 Mechanical properties	5
1.2.4 Vibration damping capacity	7
1.2.5 Sound absorption	8
1.2.6 Freeze-thaw durability	8
1.2.7 Abrasion resistance	8
1.2.8 Shrinkage	9
1.2.9 Air void content and density	10
1.2.10 Permeability	10
1.2.11 Steel rebar corrosion resistance	11
1.2.12 Alkali-silica reactivity reduction	11
1.2.13 Chemical attack resistance	11
1.2.14 Bond strength to steel rebar	11
1.2.15 Creep rate	12
1.2.16 Coefficient of thermal expansion	12
1.2.17 Specific heat	12
1.2.18 Thermal conductivity	12
1.2.19 Fiber dispersion	13
1.2.20 Defect dynamics during elastic deformation	13
1.2.21 Dielectric constant	16

	1.2.22 Conclusion	16
1.3	Improving cement-based materials by using short fibers	16
1.4	Improving cement-based materials by interface engineering	19
	1.4.1 Introduction	19
	1.4.2 Steel rebar surface treatments for interface engineering	19
	1.4.3 Admixture surface treatments for interface engineering	24
	1.4.4 Admixtures for interface engineering	26
	1.4.5 Conclusion	29
1.5	Improving cement-based materials by corrosion protection	29
	1.5.1 Introduction	29
	1.5.2 Steel surface treatment	30
	1.5.3 Admixtures in concrete	31
	1.5.4 Surface coating on concrete	33
	1.5.5 Cathodic protection	33
	1.5.6 Steel replacement	34
	1.5.7 Conclusion	34

## **2 Introduction to Multifunctional Cement-Based Materials 53**

2.1	Structural applications	53
2.2	Multifunctionality and electrical conduction behavior	56
2.3	Background on electrical conduction behavior	57
	2.3.1 Charge transport	57
	2.3.1.1 Transport due to voltage gradient	58
	2.3.1.2 Transport due to charge carrier concentration gradient	62
	2.3.1.3 Einstein relationship	63
	2.3.2 Electronic energy bands	64
	2.3.3 Metals, insulators, composites	

	and semiconductors	66
	2.3.3.1 Metals	66
	2.3.3.2 Insulators	66
	2.3.3.3 Composites	67
	2.3.3.4 Semiconductors	71
2.3.4	Temperature dependence of electrical resistivity	73
	2.3.4.1 Metals	73
	2.3.4.2 Semiconductors	74
	2.3.4.3 Composites	76
2.3.5	Ionic conduction	79
2.3.6	Semiconductors	80
	2.3.6.1 Intrinsic semiconductors	80
	2.3.6.1.1 Generation of Carriers	80
	2.3.6.1.2 Recombination of carriers	82
	2.3.6.2 Extrinsic semiconductors	83
	2.3.6.2.1 Impurity semiconductors	83
	2.3.6.2.1.1 n-type semiconductors	83
	2.3.6.2.1.2 p-type semiconductors	87
	2.3.6.2.2 Defect semiconductors	90
	2.3.6.2.2.1 Excess semiconductors	90
	2.3.6.2.2.2 Deficit semiconductors	91
	2.3.6.3 The mass-action law	92
	2.3.6.4 Majority and minority carriers	93
	2.3.6.5 The pn junction	94
2.4	Resistive behavior	98
2.5	Effect of temperature on resistive behavior	101
2.6	Effect of strain on resistive behavior	103
2.7	Effect of damage on resistive behavior	108
2.8	Thermoelectric behavior	112
2.9	Electromagnetic behavior	115

<b>3</b>	<b>Cement-Based Materials for Piezoresistivity (Strain Sensing)</b>	<b>121</b>
3.1	Introduction	121
3.2	Effect of fiber type on the piezoresistive behavior	123
3.2.1	Cement paste containing 0.72 vol.% short steel fibers	123
3.2.2	Cement paste containing 0.36 vol.% short steel fibers	123
3.2.3	Cement paste containing 0.5 vol.% short carbon fibers	123
3.2.4	Cement paste containing 0.5 vol.% short carbon filaments	130
3.2.5	Gage factor	130
3.2.6	Electrical resistivity	131
3.2.7	Discussion	131
3.3	Effect of curing age on the piezoresistive behavior	132
3.4	Mechanism behind piezoresistivity in short fiber cement-based materials	133
3.5	Piezoresistivity in continuous fiber cement-based materials	134
3.6	Piezoresistivity in short fiber cement coating	138
3.7	DC vs. AC	139
3.8	Application in weighing in motion	140
3.9	Conclusion	144
<b>4</b>	<b>Cement-Based Materials for Damage Sensing</b>	<b>149</b>
4.1	Damage sensing	149
4.2	Sensing damage due to edge proximity	150
4.3	Sensing damage due to stress in a cement-based material	153
4.3.1	Sensing damage in a cement-based material without fibers	154

4.3.1.1	Cement paste	154
4.3.1.2	Mortars	160
4.3.1.3	Concrete	164
4.3.1.4	Effect of strain rate	167
4.3.2	Sensing damage in a cement-based material containing conductive short fibers	170
4.3.3	Sensing damage at the interface between concrete and steel rebar	179
4.3.4	Sensing damage at the interface between new concrete and old concrete	181
4.3.5	Sensing damage at the interface between unbonded concrete elements	184
4.3.6	Sensing damage at the interface between concrete and its carbon fiber epoxy matrix composite retrofit	188
4.4	Sensing damage due to freeze-thaw cycling in a cement-based material	191
4.5	Sensing damage due to drying shrinkage in a cement-based material	195
4.6	Sensing damage due to creep in a cement-based material	199
4.7	Conclusion	201
<b>5</b>	<b>Electrically Conductive Cement-Based Materials</b>	<b>211</b>
5.1	Introduction	211
5.2	Electrical conduction	211
5.3	Applications	214
5.3.1	Electrical grounding and lighting protection	214
5.3.2	Static charge dissipation	214
5.3.3	Resistance heating	214
5.3.4	Cathodic protection	217
5.3.5	Electromagnetic interference shielding	217
5.3.6	Lateral guidance in automatic highways	218
5.3.7	Thermoelectric functions	220
5.4	Materials	220

5.5	Comparative study	222
5.6	Thermoelectric behavior	229
	5.6.1 Introduction	229
	5.6.2 Cement-based materials for the Seebeck effect	230
5.7	Conclusion	238
<b>6</b>	<b>Cement-Based Materials for Dielectric Functions</b>	<b>243</b>
6.1	Dielectric functions	243
6.2	Dielectric constant	243
6.3	Dielectric strength	247
6.4	Piezoelectric behavior	248
6.5	Ferroelectric behavior	258
6.6	Effect of admixtures on the dielectric constant of cement-based materials	265
6.7	Effect of stress on the dielectric constant of cement paste	267
<b>7</b>	<b>Cement-Based Materials for Thermal Engineering</b>	<b>275</b>
7.1	Introduction	275
7.2	Cement-matrix composites for temperature sensing	275
7.3	Cement-matrix composites for resistance heating	276
7.4	Cement-matrix composites for heat retention	277
7.5	Structural performance	282
<b>8</b>	<b>Cement-Based Materials for Damping</b>	<b>285</b>
8.1	Introduction to damping	285
8.2	Cement-based materials for vibration reduction	287
