

THE CAMBRIDGE
ENCYCLOPEDIA OF

SPACE

Missions, Applications and Exploration

Fernand Verger, Isabelle Sourbès-Verger and Raymond Ghirardi
with contributions by Xavier Pasco

Contents

Foreword vii

Preface ix

CHAPTER ONE

The environment of outer space 1

Deep space 2

Near space 4

CHAPTER TWO

Orbits 9

General principles 10

Sun-synchronous satellite orbits 16

The geostationary satellite orbits 20

Lagrange points and associated orbits 25

Space probe orbits 26

CHAPTER THREE

Ground tracks 31

Overview 32

From orbit to Earth: mapping the ground track 34

Types of ground track 39

Ground tracks and orbital cycles 42

CHAPTER FOUR

Occupation of space 45

The geography of spaceborne objects 46

Satellites and probes 57

Civilian and military applications 61

CHAPTER FIVE*Space policy and budgets* 67

- Budgets and space activities throughout the world 68
- Russia and the CIS Republics 73
- The United States 79
- Europe 87
- Japan 95
- China 99
- India 101
- Israel, Canada, Brazil and Australia 103

CHAPTER SIX*Access to space* 105

- Overview 106
- International comparison 107
- Russia and the CIS Republics 119
- The United States 129
- Europe 141
- Japan 149
- China and India 153
- Israel, Brazil and other countries 157

CHAPTER SEVEN*Circumterrestrial scientific missions* 159

- Scientific research 160
- Study of the Earth 162
- Observation of the circumterrestrial environment 167
- Astronomical observation 180
- Other fields of investigation 187

CHAPTER EIGHT*Exploration beyond geocentric orbit* 191

- Exploration and geography 192
- The Moon 193
- Solar System observation missions 200

CHAPTER NINE*Earth observation* 225

- Overview 226
- Sensors 228
- Images of the Earth 238
- Meteorology 241
- Remote sensing of terrestrial resources 247
- Optical remote sensing systems 250
- SAR-equipped Earth resource systems 266
- Remote sensing – the way ahead 273

CHAPTER TEN*Telecommunications* 279

- Geographical constraints 280
- Frequencies and reservations 285
- Missions 288
- Geography of space telecommunications 296
- International systems 298
- Regional systems 308
- National systems 314

CHAPTER ELEVEN*Positioning and navigation* 317

- Overview 318
- Systems using downlink signals 318
- Systems using uplink signals 328

CHAPTER TWELVE*Military applications of space* 333

- Status of military activity 334
- Collection of information 336
- Telecommunications 349
- Space: the new battlefield? 353

CHAPTER THIRTEEN*Living in space* 359

- Human occupation of space 360
- First steps in space 364
- The first space stations 367
- The Space Shuttle, Mir and Buran 370
- The International Space Station 375
- Future Chinese programme 381

- Bibliography 383
- Internet sites 385
- Index 390
