INSECT SYMBIOSIS

1 Insect Symbiosis: An Introduction

Hajime Ishikawa

CONTENTS

Introduction	1
Types of Associations between Insects and Microorganisms	2
Gut Microbes	2
Endoparasitism	4
Extracellular Symbiosis	5
Intracellular Symbiosis	5
Mutualistic Symbionts in Insects	6
Mycetocyte Symbionts	6
<i>Buchnera</i>	7
Secondary Symbionts	9
Yeast-Like Symbionts	9
Intracellular Symbionts of Cockroaches and Termites	10
Intracellular Symbionts of Coleoptera	11
Intracellular Symbionts of Blood Suckers	11
Guest Microbes in Insects	12
Sex-Ratio Distorters	12
<i>Spiroplasma</i> , an Early Male-Killer	12
Microsporidia, a Late Male-Killer	13
<i>Wolbachia</i>	14
Conclusion	16
References	16

2 *Buchnera* Bacteria and Other Symbionts of Aphids

Angela E. Douglas

CONTENTS

A Historical Overview of Symbiotic Bacteria in Aphids	23
Localization of Bacteria.....	24
<i>Buchnera</i>	24
Accessory Bacteria	25
Modes of Transmission of Bacteria.....	25
<i>Buchnera</i>	25
Accessory Bacteria	27
Mutual Dependence	29
Bacteria	29
The Aphid	30
Concluding Comments.....	35
Acknowledgments	35
References	35

3 Comparative Genomics of Insect Endosymbionts

Ivica Tamas and Siv G.E. Andersson

CONTENTS

Introduction	39
Aphid Endosymbionts: <i>Buchnera</i>	40
Endosymbiosis: Metabolic Considerations	41
<i>Buchnera</i> and Their Free-Living Relatives	42
Divergence Dates for <i>Buchnera</i>	43
Comparative Genomics of <i>Buchnera</i>	43
Deterioration of the <i>Buchnera</i> Genomes	44
Cysteine Biosynthetic Genes	44
Cell-Envelope Genes	45
DNA Repair-Associated Genes	45
Genome Degradation: A Gradual Process	46
Intracellular Mutualism vs. Parasitism	47
Are Switches between Parasitism and Mutualism Possible?	48
Concluding Remarks	48
References	49

4 Symbiosis in Tsetse

Serap Aksoy

CONTENTS

Introduction	53
Characterization of Tsetse Symbionts	53
Evolutionary Histories of Symbionts	54
Genomics of the Obligate Symbiont <i>Wigglesworthia</i>	56
Genomics of Genus <i>Sodalis</i>	57
Functional Role of Tsetse Symbionts.....	59
Symbiont-Host Interactions.....	59
Symbionts as Gene-Expression Vehicles.....	60
Trypanosomiasis Control and the Impact of Parasite Refractory Tsetse on Disease Transmission.....	61
Acknowledgments	62
References	62

5 Endosymbiosis in the Weevil of the Genus *Sitophilus*: Genetic, Physiological, and Molecular Interactions among Associated Genomes

Abdelaziz Heddi

CONTENTS

Introduction	67
The Biology of <i>Sitophilus</i> ssp. Symbiosis	68
Phylogenetic Characterization of SOPE and <i>Wolbachia</i>	70
Intracellular Bacterial Genome Evolution	70
Insect–Bacteria Interactions in the Weevil Symbiotic Association	72
Genetic Interactions between Endosymbionts and Weevils	72
<i>Wolbachia</i> Induce Cytoplasmic Incompatibility in Weevils	73
Weevil-SOPE Physiological Interactions	74
Molecular Interaction between SOPE and Weevils	76
Conclusion	77
Acknowledgments	78
References	78

6 *Rhodnius prolixus* and Its Symbiont, *Rhodococcus rhodnii*: A Model for Paratransgenic Control of Disease Transmission

Ravi V. Durvasula, Ranjini K. Sundaram,
Celia Cordon-Rosales, Pamela Pennington, and C. Ben Beard

CONTENTS

Introduction	83
Transgenic Modification	84
Paratransgenesis	84
The Triatomine Bug <i>Rhodnius prolixus</i> : A Paradigm for Paratransgenesis	85
Paratransgenic Manipulation of <i>Rhodnius prolixus</i>	85
Cecropin A Expression in Paratransgenic <i>Rhodnius prolixus</i>	86
Antibody Expression	88
A Spreading Strategy for Potential Field Application	91
Cruzigard: A Substrate for Gene Delivery	91
Foreign Gene Spread under Spatially Accurate Conditions	92
Environmental Implications of a Paratransgenic Strategy	93
Summary	94
References	94

7 Bark Beetle–Fungus Symbioses

Diana L. Six

CONTENTS

Introduction	97
Bark Beetles	98
Bark Beetle–Associated Fungi.....	99
Mycelial Fungi	99
Yeasts	100
Maintenance of Associations	101
Beetle Adaptations	101
Fungal Adaptations	102
Bark Beetle–Fungus Symbioses	104
Nutrition	104
Transport	107
Protection	107
Other Effects	107
Factors Constraining Mutualism in Bark Beetle–Fungus Associations.....	107
Costs.....	108
Rewards.....	108
Contact	109
Potential Origins and Consequences of Oligophily	109
Acknowledgments	110
References	110

8 Symbiotic Relationships of Tephritids

Carol R. Lauzon

CONTENTS

Introduction	115
General Terms for Describing Microbe–Tephritid Interactions	116
Background: Exposure, Acquisition, and Transmission	116
Bacteria in the Life History of Tephritids: A Link to Nitrogen Provisioning and Other Metabolic Activities	118
Attraction of Tephritids to Odors of Bacteria or Odors Produced by Bacteria	119
Tephritid–Microbe–Plant Interactions	120
Tephritids and Internal Extracellular Bacteria	121
Biofilms within Digestive and Reproductive Organs and Tephritids	121
Microorganisms as Potential Biocontrol Agents of Tephritids	123
Use of Probiotics in Mass-Rearing Programs and Sterile Insect Technique	124
Conclusions	124
Acknowledgments	125
References	125

9 Symbionts Affecting Termite Behavior

Kenji Matsuura

CONTENTS

Introduction	131
Nestmate Recognition Mediated by Intestinal Bacteria.....	132
Nestmate Recognition in Eusocial Insects	132
Nest Odor and Nestmate Recognition.....	133
Colony-Specific Composition of Intestinal Bacteria and Formation of Nest Odor.....	133
Does Composition of Intestinal Bacteria Mediate Nestmate Recognition?.....	135
Colony Fusion.....	135
“Termite Balls”: The Egg-Mimicking Sclerotia of a Fungus	137
Egg-Mimicking Sclerotia.....	138
Interaction between the Termites and the Fungus	139
The Evolutionary Process of Egg Mimicry by the Sclerotia.....	140
Conclusion.....	141
References	141

10 Symbiosis of Microsporidia and Insects

*Philip Agnew, James J. Becnel, Dieter Ebert,
and Yannis Michalakis*

CONTENTS

Introduction	145
Phylogenetic Position and Genomic Properties	146
Ancient Eukaryotes	146
Not-So-Ancient Eukaryotes	147
Comparisons with the Fungi	147
The Microsporidia: Degenerate Eukaryotes	148
Genomic Data	148
Aspects of Intracellular Life	150
Macroevolutionary Variation and Patterns of Transmission	152
Spores and the Polar Filament	152
Intrahost Transmission	153
Vertical Transmission	154
Mixed Patterns of Vertical and Horizontal Transmission	155
Where Vertical Transmission Dominates	156
Microevolutionary Variation	156
Adaptation to Altered Conditions of Transmission	157
Intrahost Competition	157
Local Adaptation	158
Genetic Variation	158
Host Responses	159
Concluding Remarks	160
Acknowledgments	160
References	161

11 A New Bacterium from the Cytophaga-Flavobacterium- Bacteroides Phylum That Causes Sex-Ratio Distortion

Andrew R. Weeks and Johannes A.J. Breeuwer

CONTENTS

Introduction	165
Haploid Female Parthenogenesis in the Phytophagous Mite <i>Brevipalpus phoenicis</i>	166
Parthenogenesis in the Whitefly Parasitoid Genus <i>Encarsia</i>	168
Cellular Ultrastructure of the CFB-BP Bacterium and Other Infected Hosts.....	170
Endosymbionts of the CFB Phylum.....	171
Conclusions	173
References	174

12 Inherited Microorganisms That Selectively Kill Male Hosts: The Hidden Players of Insect Evolution?

*Gregory D.D. Hurst, Francis M. Jiggins,
and Michael E.N. Majerus*

CONTENTS

Introduction	177
Late Male Killing.....	179
Early Male Killing.....	181
Host Diversity.....	181
Potential Other Hosts of Early Male Killers.....	183
The Systematic Diversity of Male-Killing Bacteria.....	183
Variation in the Prevalence of Early Male Killers in Natural Populations.....	186
Transmission Fidelity.....	186
Direct Effects on Female Host Survival and Fecundity.....	187
Level of Fitness Compensation.....	188
Coexistence of Male Killers within a Population.....	189
Consequences of Male-Killing Bacteria for the Dynamics and Evolution of Their Hosts.....	189
Could Male-Killing Bacteria Lower Population Size or Cause Population Extinction?.....	189
Sex-Biased Populations and Sexual Selection.....	191
Resistance to the Action or Transmission of Male-Killing Bacteria.....	191
Summary	193
References	193

13 *Wolbachia pipientis*: Impotent by Association

Stephen L. Dobson

CONTENTS

Evolution of <i>Wolbachia</i> Reproductive Parasites.....	199
Cytoplasmic Incompatibility.....	200
<i>Wolbachia</i> Description and Early Applied Suppression Strategies	202
<i>Wolbachia</i> Incrimination.....	204
Phylogenetic Analyses	204
<i>Wolbachia</i> Morphology and Interaction with Host Cells.....	205
<i>Wolbachia</i> Effect on Host Population Size	206
Applied Strategies Employing <i>Wolbachia</i> Infections.....	206
Conclusion.....	208
References	209

14 Cytoplasmic Incompatibility

Kostas Bourtzis, Henk R. Braig, and Timothy L. Karr

CONTENTS

Introduction	217
CI Systems	217
Intracellular Systems.....	218
Addiction Systems.....	218
Medea Factors	223
Cytoplasmic Male Sterility	224
Intercellular Mechanisms.....	225
Bacteriocins	225
Intracellular Microorganisms	226
<i>Wolbachia</i> -Induced CI.....	226
Description	226
Distribution	227
The Mechanism of <i>Wolbachia</i> -Induced CI.....	228
Genetics and Cell Biology of <i>Wolbachia</i> -Induced CI.....	230
Genetic Analysis of Host/Symbiosis	230
Genetics of Growth Control in <i>Drosophila</i>	233
Cell Biology of <i>Wolbachia</i> -Induced CI	235
Acknowledgments	237
References	237

15 Parthenogenesis Associated with *Wolbachia*

Martinus E. Huigens and Richard Stouthamer

CONTENTS

Parthenogenesis Mediated by Microbial Infections	247
<i>Wolbachia</i> -Induced Parthenogenesis in Haplodiploids	248
Cytogenetics: Parthenogenesis Not Only through Gamete Duplication.....	252
Distribution and Density of <i>Wolbachia</i> in Parthenogenetic Wasps.....	254
Phylogenetics: No Clustering of PI- <i>Wolbachia</i>	255
Host Fitness: Higher Costs of Carrying <i>Wolbachia</i> in Mixed Populations	256
Transmission Route	256
Nuclear-Cytoplasmic Conflict	257
Physiological Cost	258
Dynamics of PI- <i>Wolbachia</i> and the Evolution of “Virginity” Mutants.....	259
Conclusion.....	261
References	262

16 Insights into *Wolbachia* Obligatory Symbiosis

*Franck Dedeine, Claudio Bandi, Michel Boulétreau,
and Laura H. Kramer*

CONTENTS

Introduction	267
Obligatory <i>Wolbachia</i> in Filarial Nematodes	268
A Summary of Current Information.....	268
Evidence for Single Infection in Filarial Nematode Ancestor	269
Vertical vs. Horizontal Transmission; Sex vs. No Sex	270
Beneficial and Obligatory <i>Wolbachia</i> in Insects	271
Facultative <i>Wolbachia</i> Infections That Enhance Insect Fecundity	271
Obligatory <i>Wolbachia</i> in Insects.....	272
Obligatory <i>Wolbachia</i> -Induced Parthenogenesis	272
<i>Wolbachia</i> Dependence for Oogenesis	273
<i>Wolbachia</i> Specializations and Evolutionary Transitions	276
Reasons for Specialization in <i>Wolbachia</i> Symbiosis	276
Why Has the Association Filarial Nematode/ <i>Wolbachia</i> Led to Obligatory Symbiosis Instead of Reproductive Parasitism?	276
Why Has the Association Arthropod/ <i>Wolbachia</i> Not Led More Frequently to Obligatory Symbiosis?	277
Evolutionary Transitions between Symbiotic Lifestyles.....	277
Coadaptations Require (Quite) Long Evolutionary Times.....	277
Rapid Evolutionary Mechanisms for Transition.....	278
<i>Wolbachia</i> Obligatory Symbiosis: Mutualism or Trickery?.....	279
Acknowledgments	280
References	280

17 Symbiosis and the Origin of Species

Seth R. Bordenstein

CONTENTS

Introduction	283
Defining a Species and Symbiont.....	284
<i>Wolbachia</i> as a Model System for Symbiont-Induced Speciation.....	285
Abundance.....	285
Reproductive Alterations.....	285
Reproductive Isolation	286
Rapid Speciation.....	286
Cytoplasmic Incompatibility and Speciation.....	287
Two Forms of CI	287
Four Models of CI-Assisted Speciation	288
Model 1 (CI Alone).....	288
Model 2 (CI Coupled with Genetically Based Isolation)	291
Model 3 (Host Accommodation)	293
Model 4 (Reinforcement).....	294
Asexuality, Sexual Degradation, and the Origin of Species	295
Skeptical Views on <i>Wolbachia</i> -Assisted Speciation.....	297
From Wallin to <i>Wolbachia</i> and Beyond.....	299
Acknowledgments	299
References	300

18 Discovery of Symbiont–Host Horizontal Genome Transfer: A Beetle Carrying Two Bacterial and One Chromosomal *Wolbachia* Endosymbionts

Takema Fukatsu, Natsuko Kondo, Nobuyuki Ijichi,
and Naruo Nikoh

CONTENTS

Endosymbiotic Bacteria of the Genus <i>Wolbachia</i>	306
The Adzuki Bean Beetle, <i>Callosobruchus chinensis</i>	306
Detection of <i>Wolbachia</i> from <i>C. chinensis</i>	307
Superinfection with Three Distinct Strains of <i>Wolbachia</i> in <i>C. chinensis</i>	307
Prevailing Triple Infection in Natural Populations of <i>C. chinensis</i>	308
What Are the Three <i>Wolbachia</i> Strains Doing in the Same Host Insect?.....	309
Different Levels of CI Caused by the Three <i>Wolbachia</i> Strains.....	309
Quantification of <i>Wolbachia</i> Density in Host Insect.....	310
Population Dynamics of <i>Wolbachia</i> through Host Development.....	310
<i>Wolbachia</i> Density in Tissues of <i>C. chinensis</i> Adults.....	311
Differential Tissue Tropism of the Three <i>Wolbachia</i> Strains in the Same Host Insect.....	312
Peculiar <i>Wolbachia</i> Composition in Nurse Tissue and Oocyte: Implication for Vertical-Transmission Process.....	313
Factors Responsible for Stable Maintenance of <i>Wolbachia</i> Infection in Host Populations.....	313
Strategies of wBruCon and wBruOri to Persist in Host Populations.....	314
Peculiar Properties of wBruAus.....	314
Antibiotic Resistance of wBruAus.....	314
Sex-Linked Inheritance of wBruAus.....	314
Sex-Dependent Density Difference of wBruAus.....	315
Detection of <i>Wolbachia</i> Genes in Cured Strain of <i>C. chinensis</i>	316
Structure of <i>Wolbachia</i> Genome Fragments Obtained from Cured Strain of <i>C. chinensis</i>	316
Non-LTR Retrotransposon-Like Sequence in the <i>Wolbachia</i> Genome Fragment.....	316
Comparison with the <i>Wolbachia</i> Genome from <i>D. melanogaster</i>	317
The Nature of wBruAus as “Chromosomal <i>Wolbachia</i> ”.....	318
Universal Occurrence of Horizontal Gene Transfers between Prokaryotes.....	318

Horizontal Gene Transfers between Prokaryote and Eukaryote	318
Mechanisms of Prokaryote–Eukaryote Horizontal Gene Transfer: “Food Hypothesis” and “Endosymbiont Hypothesis”	319
Horizontal Genome Transfer from <i>Wolbachia</i> Endosymbiont to X Chromosome of <i>C. chinensis</i>	319
Inactivated <i>Wolbachia</i> Genes on Host Chromosome	319
Process of Symbiont–Host Horizontal Gene Transfer	320
Evolutionary Origin	320
Maintenance Mechanism in Host Populations	320
Other Symbiont–Host Horizontal Gene Transfers To Be Found	320
Evolutionary Implications.....	321
Perspective.....	321
Acknowledgments	322
References	322
