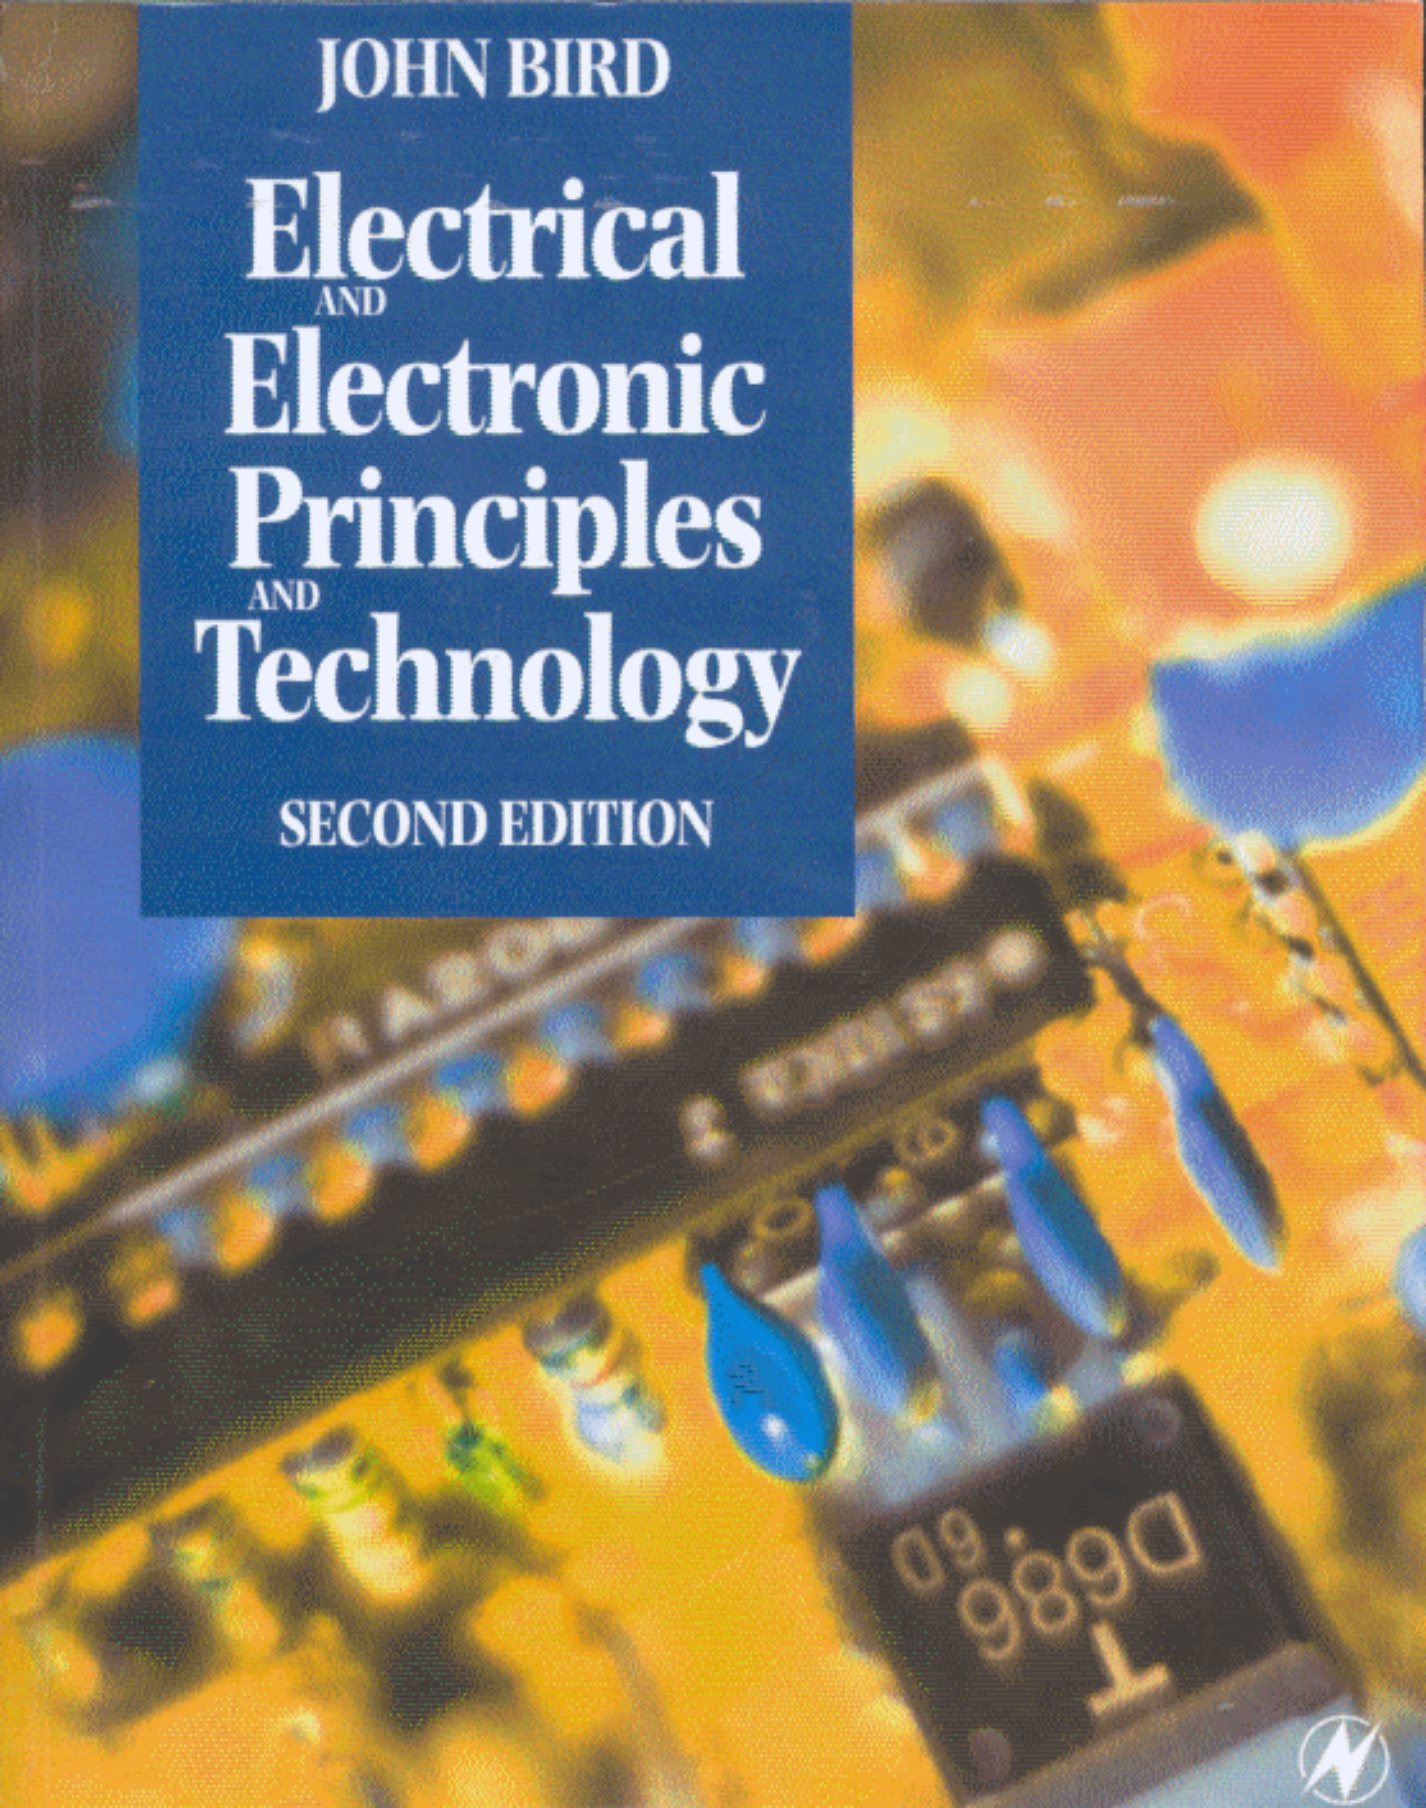
JOHN BIRD

Electrical AND Electronic Principles AND Technology

SECOND EDITION



Contents

Preface ix

SECTION 1 Basic Electrical and Electronic Engineering Principles 1

1 Units associated with basic electrical quantities 3
1.1 SI units 3
1.2 Charge 3
1.3 Force 4
1.4 Work 4
1.5 Power 4
1.6 Electrical potential and e.m.f. 5
1.7 Resistance and conductance 5
1.8 Electrical power and energy 6
1.9 Summary of terms, units and their symbols 7

2 An introduction to electric circuits 9
2.1 Electrical/electronic system block diagrams 9
2.2 Standard symbols for electrical components 10
2.3 Electric current and quantity of electricity 10
2.4 Potential difference and resistance 12
2.5 Basic electrical measuring instruments 12
2.6 Linear and non-linear devices 12
2.7 Ohm's law 13
2.8 Multiples and sub-multiples 13
2.9 Conductors and insulators 14
2.10 Electrical power and energy 15
2.11 Main effects of electric current 17
2.12 Fuses 18

3 Resistance variation 20
3.1 Resistance and resistivity 20
3.2 Temperature coefficient of resistance 22
3.3 Resistor colour coding and ohmic values 25

4 Chemical effects of electricity 29
4.1 Introduction 29
4.2 Electrolysis 29
4.3 Electroplating 30
4.4 The simple cell 30
4.5 Corrosion 31
4.6 E.m.f. and internal resistance of a cell 31
4.7 Primary cells 34
4.8 Secondary cells 34
4.9 Cell capacity 35

Assignment 1 38

5 Series and parallel networks 39
5.1 Series circuits 39
5.2 Potential divider 40
5.3 Parallel networks 42
5.4 Current division 45
5.5 Wiring lamps in series and in parallel 49

6 Capacitors and capacitance 52
6.1 Electrostatic field 52
6.2 Electric field strength 53
6.3 Capacitance 54
6.4 Capacitors 54
6.5 Electric flux density 55
6.6 Permittivity 55
6.7 The parallel plate capacitor 57
6.8 Capacitors connected in parallel and series 59
6.9 Dielectric strength 62
6.10 Energy stored in capacitors 63
6.11 Practical types of capacitor 64
6.12 Discharging capacitors 66

7 Magnetic circuits 68
7.1 Magnetic fields 68
7.2 Magnetic flux and flux density 69
7.3 Magnetomotive force and magnetic field strength 70
7.4 Permeability and B–H curves 70
7.5 Reluctance 73

7.6 Composite series magnetic circuits 74
7.7 Comparison between electrical and magnetic quantities 77
7.8 Hysteresis and hysteresis loss 77

Assignment 2 81

8 Electromagnetism 82
8.1 Magnetic field due to an electric current 82
8.2 Electromagnets 84
8.3 Force on a current-carrying conductor 85
8.4 Principle of operation of a simple d.c. motor 89
8.5 Principle of operation of a moving-coil instrument 89
8.6 Force on a charge 90

9 Electromagnetic induction 93
9.1 Introduction to electromagnetic induction 93
9.2 Laws of electromagnetic induction 94
9.3 Inductance 97
9.4 Inductors 98
9.5 Energy stored 99
9.6 Inductance of a coil 99
9.7 Mutual inductance 101

10 Electrical measuring instruments and measurements 104
10.1 Introduction 104
10.2 Analogue instruments 105
10.3 Moving-iron instrument 105
10.4 The moving-coil rectifier instrument 105
10.5 Comparison of moving-coil, moving-iron and moving-coil rectifier instruments 106
10.6 Shunts and multipliers 106
10.7 Electronic instruments 108
10.8 The ohmmeter 108
10.9 Multimeters 109
10.10 Wattmeters 109
10.11 Instrument 'loading' effect 109
10.12 The cathode ray oscilloscope 111
10.13 Waveform harmonics 114
10.14 Logarithmic ratios 115
10.15 Null method of measurement 118
10.16 Wheatstone bridge 118
10.17 D.C. potentiometer 119
10.18 A.C. bridges 120
10.19 Q-meter 121
10.20 Measurement errors 122

11 Semiconductor diodes 127
11.1 Types of materials 127
11.2 Silicon and germanium 127
11.3 n-type and p-type materials 128
11.4 The p-n junction 129
11.5 Forward and reverse bias 129
11.6 Semiconductor diodes 130
11.7 Rectification 132

12 Transistors 136
12.1 The bipolar junction transistor 136
12.2 Transistor action 137
12.3 Transistor symbols 139
12.4 Transistor connections 139
12.5 Transistor characteristics 140
12.6 The transistor as an amplifier 142
12.7 The load line 144
12.8 Current and voltage gains 145
12.9 Thermal runaway 147

Assignment 3 152

Formulae for basic electrical and electronic engineering principles 153

SECTION 2 Further Electrical and Electronic Principles 155

13 D.C. circuit theory 157
13.1 Introduction 157
13.2 Kirchhoff's laws 157
13.3 The superposition theorem 161
13.4 General d.c. circuit theory 164
13.5 Thévenin's theorem 166
13.6 Constant-current source 171
13.7 Norton's theorem 172
13.8 Thévenin and Norton equivalent networks 175
13.9 Maximum power transfer theorem 179

14 Alternating voltages and currents 183
14.1 Introduction 183
14.2 The a.c. generator 183
14.3 Waveforms 184
14.4 A.C. values 185

14.5 The equation of a sinusoidal waveform 189
14.6 Combination of waveforms 191
14.7 Rectification 194

Assignment 4 197

15 Single-phase series a.c. circuits 198
15.1 Purely resistive a.c. circuit 198
15.2 Purely inductive a.c. circuit 198
15.3 Purely capacitive a.c. circuit 199
15.4 *R–L* series a.c. circuit 201
15.5 *R–C* series a.c. circuit 204
15.6 *R–L–C* series a.c. circuit 206
15.7 Series resonance 209
15.8 Q-factor 210
15.9 Bandwidth and selectivity 212
15.10 Power in a.c. circuits 213
15.11 Power triangle and power factor 214

16 Single-phase parallel a.c. circuits 219
16.1 Introduction 219
16.2 *R–L* parallel a.c. circuit 219
16.3 *R–C* parallel a.c. circuit 220
16.4 *L–C* parallel a.c. circuit 222
16.5 *LR–C* parallel a.c. circuit 223
16.6 Parallel resonance and Q-factor 226
16.7 Power factor improvement 230

17 Filter networks 236
17.1 Introduction 236
17.2 Two-port networks and characteristic impedance 236
17.3 Low-pass filters 237
17.4 High-pass filters 240
17.5 Band-pass filters 244
17.6 Band-stop filters 245

18 D.C. transients 248
18.1 Introduction 248
18.2 Charging a capacitor 248
18.3 Time constant for a *C–R* circuit 249
18.4 Transient curves for a *C–R* circuit 250
18.5 Discharging a capacitor 253
18.6 Current growth in an *L–R* circuit 255
18.7 Time constant for an *L–R* circuit 256
18.8 Transient curves for an *L–R* circuit 256
18.9 Current decay in an *L–R* circuit 257
18.10 Switching inductive circuits 260
18.11 The effects of time constant on a rectangular waveform 260

19 Operational amplifiers 264
19.1 Introduction to operational amplifiers 264
19.2 Some op amp parameters 266
19.3 Op amp inverting amplifier 267
19.4 Op amp non-inverting amplifier 269
19.5 Op amp voltage-follower 270
19.6 Op amp summing amplifier 271
19.7 Op amp voltage comparator 272
19.8 Op amp integrator 272
19.9 Op amp differential amplifier 274
19.10 Digital to analogue (D/A) conversion 276
19.11 Analogue to digital (A/D) conversion 276

Assignment 5 281

Formulae for further electrical and electronic engineering principles 283

SECTION 3 Electrical Power Technology 285

20 Three-phase systems 287
20.1 Introduction 287
20.2 Three-phase supply 287
20.3 Star connection 288
20.4 Delta connection 291
20.5 Power in three-phase systems 293
20.6 Measurement of power in three-phase systems 295
20.7 Comparison of star and delta connections 300
20.8 Advantages of three-phase systems 300

21 Transformers 303
21.1 Introduction 303
21.2 Transformer principle of operation 304
21.3 Transformer no-load phasor diagram 306
21.4 E.m.f. equation of a transformer 308

21.5 Transformer on-load phasor diagram 310
21.6 Transformer construction 311
21.7 Equivalent circuit of a transformer 312
21.8 Regulation of a transformer 313
21.9 Transformer losses and efficiency 314
21.10 Resistance matching 317
21.11 Auto transformers 319
21.12 Isolating transformers 321
21.13 Three-phase transformers 321
21.14 Current transformers 323
21.15 Voltage transformers 324

Assignment 6 327

22 D.C. machines 328
22.1 Introduction 328
22.2 The action of a commutator 329
22.3 D.C. machine construction 329
22.4 Shunt, series and compound windings 330
22.5 E.m.f. generated in an armature winding 330
22.6 D.C. generators 332
22.7 Types of d.c. generator and their characteristics 333
22.8 D.C. machine losses 337
22.9 Efficiency of a d.c. generator 337
22.10 D.C. motors 338
22.11 Torque of a d.c. motor 339
22.12 Types of d.c. motor and their characteristics 341
22.13 The efficiency of a d.c. motor 344
22.14 D.C. motor starter 347
22.15 Speed control of d.c. motors 347
22.16 Motor cooling 350

23 Three-phase induction motors 354
23.1 Introduction 354
23.2 Production of a rotating magnetic field 354
22.3 Synchronous speed 356
23.4 Construction of a three-phase induction motor 357
23.5 Principle of operation of a three-phase induction motor 358
23.6 Slip 358
23.7 Rotor e.m.f. and frequency 359
23.8 Rotor impedance and current 360
23.9 Rotor copper loss 361
22.10 Induction motor losses and efficiency 361
23.11 Torque equation for an induction motor 363
23.12 Induction motor torque-speed characteristics 366
23.13 Starting methods for induction motors 367
23.14 Advantages of squirrel-cage induction motors 367
23.15 Advantages of wound rotor induction motors 368
23.16 Double cage induction motor 369
23.17 Uses of three-phase induction motors 369

Assignment 7 372

Formulae for electrical power technology 373

Answers to multi-choice questions 375

Index 377
