

Woodhead Publishing in Food Science and Technology

Texture in food

Volume 2: Solid foods

Edited by David Kilcast

WOODHEAD PUBLISHING LIMITED

Contents

<i>Contributor contact details</i>	xiii
<i>List of abbreviations</i>	xix
Part I Consumers, texture and food quality	1
1 Measuring consumer perceptions of texture: an overview	3
<i>D. Kilcast, Leatherhead Food International, UK</i>	
1.1 Introduction: texture and food quality	3
1.2 Perception and sensory assessment of food texture	6
1.3 Tests and test procedures	8
1.4 Instrumental measurement of texture	13
1.5 <i>In vivo</i> texture measurement	20
1.6 Future developments	23
1.7 Conclusions	26
1.8 References	28
2 Consumers and texture: understanding their perceptions and preferences	33
<i>J-F. Meullenet, University of Arkansas, USA</i>	
2.1 Introduction: problems with consumer descriptions of texture	33
2.2 Investigating consumer descriptions of texture	34
2.3 Tests and test procedures	36
2.4 Understanding consumer preferences	39
2.5 Challenges to understanding consumer preferences	44
2.6 Future trends	48
2.7 Conclusions	50
2.8 References	51

3 Texture and mastication	53
<i>A. C. Smith, Institute of Food Research, UK</i>	
3.1 Introduction	53
3.2 The mastication process	55
3.3 Measuring mastication	56
3.4 Chewing, swallowing, salivation and bolus formation	66
3.5 Future trends	71
3.6 Mastication and particular foods	75
3.7 Reviews	76
3.8 Acknowledgement	76
3.9 References	77
4 Understanding and measuring consumer perceptions of crispness	82
<i>P. Mallikarjunan, Virginia Polytechnic Institute and State University, USA</i>	
4.1 Introduction	82
4.2 Characterization and determination of crispness	85
4.3 Methods of data correlation, evaluation and analysis	91
4.4 Case-study: breaded chicken nuggets	94
4.5 Future trends	103
4.6 References	103
Part II Instrumental techniques for analysing texture	107
5 Force/deformation techniques for measuring texture	109
<i>R. Lu and J. A. Abbott, USDA Agricultural Research Service, USA</i>	
5.1 Introduction	109
5.2 Mechanical characterization of solid foods	110
5.3 Destructive measurements	118
5.4 Non-destructive measurements	128
5.5 Conclusions	138
5.6 References	139
6 Sound input techniques for measuring texture	146
<i>L. M. Duizer, Massey University, New Zealand</i>	
6.1 Introduction	146
6.2 Sound and its detection: what is sound?	147
6.3 Destructive testing	148
6.4 Non-destructive testing	155
6.5 Application of sound measurement techniques	158
6.6 Future trends	162
6.7 Sources of further information and advice	162
6.8 References	163

7 Near infrared (NIR) diffuse reflectance in texture measurement	167
<i>S. Millar, Campden and Chorleywood Food Research Association, UK</i>	
7.1 Introduction	167
7.2 Application of NIR to cereals and their products	170
7.3 Application of NIR to fruit and vegetables	173
7.4 Application of NIR to meat	176
7.5 Application of NIR to other foods	178
7.6 Conclusions and future trends	179
7.7 Sources of further information	180
7.8 References	180
8 Nuclear magnetic resonance (NMR) and magnetic resonance imaging (MRI) in texture measurement	184
<i>A. K. Thybo, A. H. Karlsson, H. C. Bertram and H. J. Andersen, Danish Institute of Agricultural Sciences, P. M. Szczypinski, Technical University of Lodz, Poland and S. Donstrup, Aarhus University Hospital, Denmark</i>	
8.1 Introduction	184
8.2 Methods and analysis	187
8.3 Application of NMR: texture determination of solid foods	189
8.4 Application of MRI: texture determination of solid foods	195
8.5 Future trends	199
8.6 References	200
9 Modelling food texture	205
<i>L. M. M. Tijskens and H. Luyten, Wageningen University and Research Centre, The Netherlands</i>	
9.1 Introduction	205
9.2 Factors affecting texture	211
9.3 Effects of enzymes on texture	218
9.4 Applying models to predict texture	222
9.5 Future trends	233
9.6 Notation	234
9.7 References	235
Part III Understanding and improving the texture of particular foods	239
10 Plant structure and fruit and vegetable texture	241
<i>K. W. Waldron, Institute of Food Research, UK</i>	
10.1 Introduction	241

10.2	Measurement of texture	242
10.3	Plant structure	244
10.4	Cellular basis of crispness, juiciness and mealiness in fruit tissue	244
10.5	Cellular stability during processing	249
10.6	Improving cell adhesion	251
10.7	Future trends	254
10.8	Acknowledgements	255
10.9	References	255
11	Plant compounds and fruit texture: the case of pear	259
	<i>T. Kojima, S. Fujita and M. Tanaka, Saga University, Japan and P. Sirisomboon, King Mongkut's Institute of Technology Ladkrabang, Thailand</i>	
11.1	Introduction: variations in pear texture	259
11.2	Measuring and modelling fruit firmness	262
11.3	Chemical compounds affecting firmness: the example of Japanese pear	270
11.4	The effect of constituents on fruit texture	275
11.5	Use of near infrared spectroscopy (NIR) to evaluate textural properties	279
11.6	Future trends	283
11.7	Sources of further information and advice	288
11.8	Acknowledgement	289
11.9	References	290
12	Controlling the texture of fruit and vegetables: the role of oxidising enzymes	295
	<i>H. J. Wichers and C. Boeriu, Agrotechnology and Food Innovations, The Netherlands</i>	
12.1	Introduction: distribution of polyphenoloxidases (PPOs) and peroxidases (PODs) in plants and plant cells	295
12.2	Biochemical and physiological role of PPOs and PODs	296
12.3	PPOs and PODs: structure and mechanisms of action	300
12.4	PPOs, PODs and texture development	304
12.5	Controlling PPO and POD activity	307
12.6	PPOs and PODs: implications for food texture	311
12.7	Future trends	311
12.8	Sources of further information	312
12.9	References	312

13 Improving fruit and vegetable texture by genetic transformation	321
<i>G. Tucker, University of Nottingham, UK</i>	
13.1 Introduction	321
13.2 Tools of genetic modification	323
13.3 Approaches to the manipulation of texture: the tomato	327
13.4 Other approaches to the manipulation of texture	333
13.5 Future trends	335
13.6 References	336
14 Raw materials quality and the texture of processed vegetables	342
<i>J. B. Adams, formerly of CCFRA, UK</i>	
14.1 Introduction	342
14.2 Vegetable texture determined by starch	342
14.3 Vegetable texture determined by cell wall polysaccharides	349
14.4 Vegetable texture affected by phenolic reactions	354
14.5 Future trends	358
14.6 Sources of further information and advice	359
14.7 References	360
15 Improving the texture of processed vegetables by vacuum infusion	364
<i>R. Saurel, University of Lyon, France</i>	
15.1 Introduction	364
15.2 Vacuum infusion technology	365
15.3 Applications to improve texture	373
15.4 Future trends	383
15.5 Sources of further information and advice	383
15.6 References	384
16 Improving the texture of frozen fruit: the case of berries	388
<i>M. Suutarinen and K. Autio, VTT Biotechnology, Finland</i>	
16.1 Introduction: the effects of freezing and thawing on berry texture	388
16.2 Maintaining texture: conventional pre-freezing treatments	390
16.3 Maintaining texture: alternative pre-freezing treatments	393
16.4 Application: frozen berries and jams	400
16.5 Future trends	405
16.6 References	405

17 Improving the texture of processed fruit: the case of olives	410
<i>I. Mafra, University of Porto and M. A. Coimbra, University of Aveiro, Portugal</i>	
17.1 Introduction: the texture of table olives	410
17.2 Factors affecting the texture quality of raw olives	412
17.3 Influence of processing on table olives	418
17.4 Improving texture	425
17.5 Future trends	426
17.6 Sources of further information and advice	428
17.7 References	430
18 Improving the texture of bread	432
<i>S. P. Cauvain, CCFRA, UK</i>	
18.1 Introduction	432
18.2 Textural characteristics of bread and other cereal-based foods	434
18.3 Definitions of texture	436
18.4 Measuring texture	437
18.5 Influence of processing and storage	442
18.6 Improving texture	445
18.7 Future trends	447
18.8 Sources of further information and advice	448
18.9 References	449
19 Analysing and improving the texture of cooked rice	451
<i>S. K. Kim, Dankook University and C. O. Rhee, Chonnam National University, Korea</i>	
19.1 Introduction	451
19.2 Criteria for evaluating rice quality	452
19.3 Hydration of rice	455
19.4 Factors affecting cooking quality	459
19.5 Testing texture quality	464
19.6 Problems and challenges	469
19.7 Sources of further information and advice	470
19.8 References	470
20 Improving the texture of pasta	475
<i>B. A. Marchylo and J. E. Dexter, Canadian Grain Commission and L. J. Malcolmson, Canadian International Grains Institute</i>	
20.1 Introduction	475
20.2 Measuring the texture of cooked pasta	478
20.3 Influence of raw materials	484
20.4 Influence of processing	490
20.5 Trends in consumer preference	492
20.6 References	494

21 Improving the texture of fried food	501
<i>C-J. Shieh and C-Y. Chang, Da-Yeh University and C-S. Chen, Chao-Yang University of Technology, Taiwan</i>	
21.1 Introduction	501
21.2 Measuring texture	501
21.3 Factors influencing texture	504
21.4 The use of response surface methodology (RSM)	508
21.5 A case study: fried gluten balls	514
21.6 Conclusions	521
21.7 References	522
 <i>Index</i>	 525
