QUATERNARY GEOLOGY AND THE ENVIRONMENT

Springer

PRAXIS

Jean A. M. Riser

Contents

Preface	xi
Contributors	xiii
Introduction	xv
1 Originality and variety of the Quaternary	1
1.1 Introduction	1
1.2 Main geological formations	3
1.2.1 Colluvium – heterogeneous slope deposits	3
1.2.2 Alluvium – river-borne deposits	3
1.2.3 Aeolian deposits and aeolian landforms	4
1.2.4 Glacial and periglacial sedimentation	4
1.2.5 Action of the sea and littoral sedimentation	5
1.2.6 Salars, tufa and travertines	5
1.2.7 Soil types	5
1.2.8 Sediments used in human activities	6
1.2.9 Shallow water reserves	6
1.2.10 Conclusion	7
1.3 Quaternary study techniques	7
1.3.1 Relative chronologies and correlations	7
1.3.2 Use of the flora and fauna	9
1.3.3 Non-radioactive techniques	17
1.3.4 Radioactive techniques	22
1.4 Conclusion	31
2 End of the Tertiary and prologue to the Quaternary	33
2.1 Introduction	33
2.2 Magnetic polarity reversal	33
2.3 Extension of the cryosphere	34

2.4	Tectonic movements, erosive dynamics and coarse detritism	34
2.5	Progressive emergence of modern flora and fauna	37
2.6	Fauna at the Pliocene–Quaternary transition	38
2.7	The emergence of hominids	41
3	Terrestrial upheavals	43
3.1	Earth dynamics – volcanic and seismic regions	43
3.1.1	Divergence zones	43
3.1.2	Convergence zones	44
3.1.3	Isolated events	45
3.2	Very different volcanoes: eruptive dynamics and products	45
3.2.1	Very different volcanoes and products	45
3.2.2	Tephrostratigraphy and tephrochronology	49
3.3	Humans and volcanoes	52
3.3.1	Historical cataclysms	54
3.3.2	Volcanic hazards	56
3.3.3	Volcanoes and climates	60
3.3.4	The useful volcano	61
3.4	Earthquakes and neotectonics	62
3.4.1	Instantaneous events	62
3.4.2	Continuous events	63
4	Fluctuations in polar, circumpolar and temperate environments	65
4.1	Natural glaciated environments	65
4.1.1	Basics of glacial dynamics	65
4.1.2	Modes of ablation and inlandis dispersion	66
4.1.3	Glacial stratigraphy	68
4.1.4	Conditions of inlandis genesis, expansion and melting . .	69
4.1.5	Direct consequences of inlandis expansion on the atmosphere, hydrosphere and lithosphere	70
4.1.6	Facies related to the ancient inlandis	71
4.1.7	Conclusion	73
4.2	Deposition types of glacial plains, plateaus and their shores . . .	75
4.2.1	Moraines	75
4.2.2	Conclusions	78
4.3	Glacial erosion structures	78
4.3.1	Morphology of shields and plains dominated by glacial erosion	78
4.3.2	Wind action and regimes	80
4.3.3	Mountain landforms and glacial sedimentation	81
4.4	Plain and mountain perglacial fossil landforms	90
4.4.1	Plain landforms	91
4.4.2	Mountain landforms	91
4.5	Colluvial and alluvial landforms and deposits	92
4.5.1	Colluvial and alluvial deposits at the bottom of slopes . .	92

4.5.2	Along-stream sedimentation	92
4.5.3	Stepping/channelling factors for alluvial structures	93
4.5.4	Examples of complex fluvial alluvial structures	94
4.6	Lacustrine and palustrine landforms	96
4.6.1	Lake types and lacustrine sedimentation conditions	96
4.6.2	Mostly organic sedimentation: peat bogs	97
4.7	Shore migration: sedimentation and littoral landforms	99
4.7.1	Mountain and glacial plain shores	99
4.8	Karst evolutions in cold and temperate regions	102
4.8.1	Karst geosystem evolution and Quaternary morphogenetic ruptures	102
4.8.2	Dissolution rate variations	103
4.8.3	Progression of karst structuration along the Quaternary	104
4.8.4	The role of morphoclimatic phases	107
4.8.5	The geographical frame: diversity of morphogenetic combinations	109
4.8.6	Endokarst sediments	114
4.9	Conclusion	118
5	Mediterranean environments	119
5.1	Mountain glacial and periglacial landforms	120
5.2	Plain periglacial landforms	121
5.3	Downslope alluvial deposits	121
5.4	Alluvial deposits in fluvial beds	122
5.5	Chronology of the littoral Quaternary	124
5.5.1	Littoral constructs of the lower Quaternary	125
5.5.2	Littoral constructs of the middle and upper Quaternary	127
5.6	Karsts from the mediterranean domain	128
5.6.1	The high mountains	128
5.6.2	Polje evolution	129
5.6.3	Littoral and submarine karsts – Marseilles calas	130
5.6.4	Karst evolution and rain heritage at semiarid margins of Mediterranean regions	131
5.6.5	Evaporite karsts	133
5.7	Travertine structures	133
5.7.1	Longitudinal organization of travertine structures in valleys	136
5.7.2	Vertical sedimentary series of travertine deposits in valleys	140
5.8	Calcareous encrustations	142
5.8.1	Mediterranean margin palaeosoils and alterites	142
5.8.2	Interpretation and importance of <i>calcretes</i>	143
5.9	Conclusion	145
6	Fauna and humans: reflection of glaciations and interglacials	147
6.1	The main Eurasian faunas	147

6.1.1	The faunas of Europe and north-west Asia in the Middle and Upper Pleistocene	148
6.2	Hominids in Eurasia	154
6.2.1	Stone-tool industries	154
6.2.2	Diversified industries of the Lower Palaeolithic during the Middle Pleistocene	155
6.2.3	New populations.	157
6.2.4	Neanderthalian social behaviours and industries during the Middle Palaeolithic	157
6.2.5	Intermediate or transition industries in the last interpleniglacial.	159
6.2.6	<i>Homo sapiens sapiens</i> in Europe.	160
6.3	Prehistory of the American continent	164
6.3.1	Terrestrial accessibility of the continent.	164
6.3.2	Maritime accessibility of the continent	164
6.3.3	A recent prehistory	164
6.4	Southern Australia and Tasmania.	165
6.5	The first steps toward a modern society.	167
6.5.1	The beginnings of agriculture	167
6.5.2	The origins of ceramics	170
6.5.3	The Mediterranean Neolithic.	171
6.5.4	The first farmers in central Europe.	171
6.6	Conclusion.	171
7	Subtropical arid zones and warm deserts.	173
7.1	Mountain sedimentation and landforms	173
7.1.1	The dry arid mountain.	174
7.1.2	Mountain and piedmont landforms and sedimentation	176
7.2	Humid palaeoseries markers	177
7.2.1	Slope structures: fossil slides and solifluction	177
7.2.2	Modern and fossil lakes.	177
7.2.3	Palaeoweathering and soils	183
7.3	Arid palaeoclimate markers.	192
7.3.1	Fossil dune forms.	192
7.3.2	Sebkhas and evaporitic sedimentation	194
7.3.3	Gypseous crusts	197
7.3.4	Varnish and desert landscapes	197
7.4	Fauna and humans before the deserts	198
7.4.1	Saharan Lower Palaeolithic: from chopper to hand ax	198
7.4.2	The Middle Palaeolithic: diversification of stone-tool industries.	200
7.4.3	Upper Palaeolithic or Epipalaeolithic: the transition.	200
7.4.4	The Neolithic: the door opens for antique societies	200
7.4.5	The Neolithic in the Near East	203
7.4.6	The prehistory of central Asia	204

7.5	Conclusion	205
7.5.1	Sketch of palaeometeorological processes	206
8	Humid tropical environments	209
8.1	The Quaternary in high tropical mountains	210
8.2	Distribution of vegetation in mountains and plains	213
8.2.1	Variations of vegetation belts in mountains	213
8.2.2	The vegetation of plateaus, piedmonts and plains	216
8.2.3	Conclusion	218
8.3	Soils and weathering	219
8.3.1	Weathering mechanisms	219
8.3.2	Ferralitic soils	220
8.3.3	Tropical ferruginous soils	221
8.4	Quaternary morphology of tropical rivers	221
8.5	Lacustrine formations and paleoclimates	222
8.6	Tropical region coasts: sandbars, lagoons and deltas	223
8.7	Quaternary and tropical karst evolution	225
8.7.1	Specific form elaboration and processes	225
8.7.2	Evolution of intertropical karst	231
8.7.3	Karst deposits as palaeoclimatic indicators and records	233
8.8	Fauna of tropical and equatorial climates	235
8.8.1	Eastern Africa	235
8.8.2	South-east Asia	236
8.8.3	Tropical South America	238
8.8.4	Originality of the Australian fauna	239
8.9	Tropical environments – the cradle of mankind?	240
8.9.1	The genus <i>Homo</i> in eastern Africa	240
8.9.2	The Indian subcontinent and south-east Asia	244
8.10	Conclusion	248
9	Characteristics and dynamics of modern oceans	249
9.1	Importance of the oceanic domain	249
9.1.1	Physical and chemical properties of water	250
9.1.2	Vertical structure and general thermohaline circulation of the oceans	251
9.2	Atmospheric circulation	252
9.3	Surface currents in the ocean	255
9.3.1	Drift currents	255
9.3.2	Geostrophic currents	257
9.3.3	Deep-water mass circulation	257
9.4	General circulation model and global transfer	258
10	Quaternary climate	261
10.1	General characteristics of Quaternary climate changes	261
10.2	The climate between 2.5 Myr and 130,000 yr	262

x Contents

10.3	The penultimate interglacial between 130,00 and 115,000 years . .	264
10.4	The last glaciation between 115,000 and 10,000 BP	266
10.4.1	General characteristics	266
10.4.2	Last glacial maximum, between 25,000 and 10,000 BP . .	269
10.5	The deglaciation	272
10.6	The Holocene: from 10,000 BP until now	273
11	General conclusion	275
	Bibliography	279
	Index	285
