

Wireless Communications and Networking

Jon W. Mark · Weihua Zhuang

Contents

Preface	xi
1 Overview of Wireless Communications and Networking	1
1.1 Historical Overview of Wireless Communications	1
1.2 Challenges in Wireless Communication Networking	2
1.2.1 The Wireless Channel	3
1.2.2 User Mobility	3
1.3 Wireless Communications Standards	4
1.3.1 First Generation Cellular Systems	4
1.3.2 Second Generation Cellular Systems	5
1.3.3 Third Generation Wireless Communications Networks	7
1.3.4 Coverage Extension	8
1.3.5 Types of Wireless Communication Networks	8
1.4 Organization of This Text	9
Summary	10
Endnotes	10
Problems	11
2 Characterization of the Wireless Channel	12
2.1 Multipath Propagation Environment	12
2.2 Linear Time-Variant Channel Model	16
2.2.1 Channel Impulse Response	16
2.2.2 Time-Variant Transfer Function	18
2.2.3 Doppler Spread Function and Delay-Doppler Spread Function	19
2.2.4 Example on the Channel Functions	22

2.3	Channel Correlation Functions	25
2.3.1	Delay Power Spectral Density	25
2.3.2	Frequency and Time Correlation Functions	27
2.3.3	Doppler Power Spectral Density	29
2.3.4	Examples on the Channel Correlation Functions	31
2.4	Large-Scale Path Loss and Shadowing	35
2.4.1	Free Space Propagation Model	36
2.4.2	Propagation Over Smooth Plane	38
2.4.3	Log-Distance Path Loss with Shadowing	40
2.4.4	Okumura-Hara Path Loss Model	41
2.4.5	Lee's Path Loss Model	43
2.4.6	Radio Cell Coverage	45
2.5	Small-Scale Multipath Fading	48
2.5.1	First-Order Statistics	48
2.5.2	Second-Order Statistics	51
	Summary	57
	Endnotes	57
	Problems	58
3	Bandpass Transmission Techniques for Mobile Radio	63
3.1	Introduction	63
3.2	Signal Space and Decision Regions	68
3.2.1	Vector-Space Representation of M -ary Signals	68
3.2.2	Signal Detection and Optimal Receiver	70
3.3	Digital Modulation	76
3.3.1	M -ary Phase Shift Keying (MPSK)	76
3.3.2	Minimum Shift Keying (MSK)	84
3.3.3	Gaussian MSK (GMSK)	88
3.3.4	Orthogonal Frequency Division Multiplexing (OFDM)	90
3.4	Power Spectral Density	93
3.5	Probability of Transmission Error	100
3.5.1	Coherent Reception in an AWGN Channel	100
3.5.2	Coherent Reception in a Flat Slow Rayleigh Fading Channel	108
	Summary	112
	Endnotes	112
	Problems	112
4	Receiver Techniques for Fading Dispersive Channels	117
4.1	Overview of Channel Impairment Mitigation Techniques	117
4.2	Diversity	121
4.2.1	Diversity Mechanisms	121
4.2.2	Linear Combining	122
4.2.3	Performance Improvement	126
4.3	Channel Equalization	134

4.3.1	Linear Equalization	136
4.3.2	Decision Feedback Equalization	146
	Summary	155
	Endnotes	155
	Problems	156
5	Fundamentals of Cellular Communications	160
5.1	Introduction	160
5.2	Frequency Reuse and Mobility Management	161
5.2.1	Cellular Communications and Frequency Reuse	161
5.2.2	Mobility Management	163
5.3	Cell Cluster Concept	163
5.3.1	Capacity Expansion by Frequency Reuse	164
5.3.2	Cellular Layout for Frequency Reuse	165
5.3.3	Geometry of Hexagonal Cells	168
5.3.4	Frequency Reuse Ratio	171
5.4	Cochannel and Adjacent Channel Interference	172
5.4.1	Cochannel Interference	172
5.4.2	Adjacent Channel Interference	175
5.5	Call Blocking and Delay at the Cell-Site	176
5.6	Other Mechanisms for Capacity Increase	180
5.6.1	Cell Splitting	180
5.6.2	Directional Antennas (Sectoring)	182
5.7	Channel Assignment Strategies	184
	Summary	185
	Endnotes	185
	Problems	186
6	Multiple Access Techniques	189
6.1	Multiple Access in a Radio Cell	189
6.2	Random Access	191
6.2.1	Aloha Systems	191
6.2.2	Carrier Sense Multiple Access (CSMA)	195
6.3	Conflict-Free Multiple Access Technologies	197
6.3.1	FDMA	197
6.3.2	TDMA	198
6.3.3	CDMA	201
6.4	Spectral Efficiency	212
6.4.1	FDMA Systems	213
6.4.2	TDMA Systems	218
6.4.3	DS-CDMA Systems	222
	Summary	229
	Endnotes	229
	Problems	230

7	Mobility Management in Wireless Networks	235
7.1	Introduction	235
7.2	Call Admission Control (CAC)	237
7.2.1	Prioritized Call Admission	238
7.3	Handoff Management	238
7.3.1	Handoff Strategies	239
7.3.2	Types of Handoff	239
7.3.3	Design Issues	240
7.3.4	Feedback-Based MAHO Strategy	241
7.3.5	AP/MSD Identification	242
7.3.6	Profile	244
7.3.7	Capability of the Mobile	244
7.3.8	Mobility Model	245
7.3.9	Intraswitch Handoff Algorithm	247
7.4	Location Management for Cellular Networks	250
7.4.1	Two-Tiered Architecture of IS-41	252
7.4.2	SS7 Network and Common Channel Signaling	253
7.4.3	Location Update, Call Setup, and Paging	255
7.5	Location Management for PCS Networks	257
7.5.1	Overlay Approach	258
7.5.2	Local Anchor Approach	259
7.6	Traffic Calculation	261
7.6.1	System and Traffic Parameters	262
7.6.2	Handoff Rate Calculation	263
	Summary	266
	Endnotes	266
	Problems	267
8	Wireless/Wireline Interworking	272
8.1	Background	272
8.2	Mobile IP	274
8.2.1	Operation of Mobile IP	276
8.2.2	Local Anchor for Mobile IP	281
8.2.3	Hierarchical Routing	282
8.3	Internet Protocol (IP)	284
8.3.1	IPv6 versus IPv4	284
8.3.2	Mobile IPv6	287
8.4	Transmission Control Protocol (TCP)	289
8.4.1	Flow Control	289
8.4.2	Modified TCP	290
8.4.3	Modified UDP	293
8.5	Network Performance	294
8.5.1	Network Model	294

8.5.2	Mobility Model 3	295
8.5.3	Handoff Delay with Local Anchor	295
8.6	Wireless Application Protocol (WAP)	300
8.6.1	Wireless Application Environment	300
8.6.2	WAP Protocol Stack	301
8.6.3	WAP Gateway	302
8.7	Mobile AD HOC Networks	303
8.7.1	Ad Hoc Routing Protocols	303
8.7.2	Comments	305
	Summary	305
	Endnotes	306
	Problems	306
Appendix		311
A	Gram–Schmidt Orthogonalization	311
B	Maximum Likelihood Detection	313
C	MSK Signal Representation	314
D	Derivation of the Rician Distribution	315
E	Pseudorandom Noise Sequences	317
F	The Erlang-B and Erlang-C Tables	319
Abbreviations and Acronyms		327
Bibliography		333
Answers to Selected Problems		345
Index		350
