

Complex Electromagnetic Problems and Numerical Simulation Approaches

Levent Sevgi

CONTENTS

PART I

Numerical Simulation Approaches

I.1	Introduction	1
I.2	Concepts and Approaches	2
I.2.1	Observable-Based Parameterization	2
I.2.2	A Model-based Engineering Approach	3
I.2.3	Direct Numerical Simulation Approaches	4
I.2.4	Verification, Validation and Accreditation (VV&A)	7
I.3	Current Challenging EM Problems	9
I.3.1	Integrated Surveillance and Control Systems	10
I.3.2	Stealth Target Design	12
I.3.3	Mobile Communication and Bioelectromagnetics	13
I.3.4	EMC / EMI	16
I.3.5	Subsurface Imaging	17
I.4	Commercial Packages vs. Special Approaches	18
I.5	Time Domain (TD) Simulation Techniques	20
I.5.1	FDTD Techniques	21
I.5.2	TLM Method	28
I.5.3	Parameter Selection and Excitation	33
I.5.4	A Near to far-field (NTFF) transformation	37
I.5.5	Injecting Analytical Incident Field	40
I.5.6	Absorbing Boundary Simulators	41
I.6	Frequency Domain Simulation Techniques	44
I.6.1	Method of Moments (MoM)	44
I.6.1.1	NEC2 Package	47
I.6.2	Split-Step Parabolic Equation Method	48
I.7	Conclusions	53
	References	53

PART II

Applications

Chapter 1: Ground-wave propagation

(with Funda Akleman)

1.1	Introduction	63
1.1.1	Historical Overview	66
1.1.2	Available Approaches	67
1.1.3	The Lower Atmosphere	68
1.1.4	Summary	69
1.2	Analytical Model	70
1.2.1	Statement of the Problem	71
1.2.2	Equivalent Earth's Radius Concept	72
1.2.3	Transformation to Non-Dimensional Quantities	74
1.2.4	Exact Spectral Solution	75
1.2.5	Ray Asymptotics: Norton Formulation	76
1.2.6	Modal Residue Series: Wait Formulation	78
1.3	Numerical Models	79
1.3.1	Split-step Parabolic Equation (SSPE) Propagator	79
1.3.1.1	Classical SSPE Algorithm	82
1.3.1.2	Calibration Against Analytical Exact Solution	84
1.3.1.3	Staircase Terrain Modeling	88
1.3.2	Time-Domain Wave Propagators (TDWP; TLMWP)	90
1.4	Applications with Canonical Test Cases	94
1.4.1	Propagation Under Ducting Conditions	97
1.4.2	Propagation Over Non-flat Terrain	99
1.4.3	Urban Wireless Propagation	102
1.4.4	Surface Waves and Mixed-Path Propagation	105
1.5	Numerical Simulators	107
1.5.1	GRWAVE: LOS Ray code	107
1.5.2	HFMIX: Surface-Wave Path Loss Predictor	109
1.5.3	KNIFE: Four-Ray Knife-Edge Code	111
1.5.4	SSPE: Frequency-domain wave Propagator	112
1.5.5	TDWP: Time-Domain Wave Propagator	118
1.6	Conclusions and Discussions	121
	References	123

Chapter 2: Antenna Design and Array Processing

2.1	Introduction	125
2.2	Antenna Fundamentals	125
2.2.1	Antenna Input Power and Input Impedance	126
2.2.2	Radiated Power and Radiation Resistance	126
2.2.3	Radiation Pattern and Directivity	128
2.2.4	Antenna Efficiency and Gain	129
2.2.5	Antenna Lobes and Beamwidth	129

2.2.6 Effective Aperture	129
2.2.7 Polarization	129
2.2.8 Standing Wave Ratio (SWR)	129
2.2.9 Bandwidth	129
2.2.10 Antenna Factor (AF)	130
2.2.11 Near Field / Far Field	130
2.2.12 Broadside / Endfire Antennas	132
2.3 Electronic Beam Steering and Direction Finding (DF)	133
2.4 Ground Screen Design	136
2.5 Antenna Simulation	138
2.5.1 MoM-Based NEC2 Code	139
2.5.2 FDANT and TLMANT Codes	146
2.6 Numerical Simulation Examples	150
2.6.1 HFSWR Transmit Array	150
2.6.2 HFSWR Receive Array	152
2.6.3 VHF DF Antenna	160
2.6.4 Cellular Phone Antenna	161
2.6.5 MoM / FDTD Comparisons	164
2.7. Sample FDANT Simulator	167
2.7.1 The FDANT Code	168
2.7.2 Time-Domain Beam Steering (FDANT vs. NEC2)	170
2.8 Conclusions and Discussion	176
References	177

Chapter 3: RCS Prediction and Reduction

3.1 Introduction	179
3.2 Target Reflectivity and RCS Reduction	184
3.3 Time-Domain RCS Simulations	188
3.4 Sample RCS Simulators	192
3.4.1 F-SNRCS Package	193
3.4.2 T-SNRCS Packages	197
3.4.3 F-BIRCS Package	199
3.5. Applications	201
3.5.1 RCS Analysis with Canonical Objects	201
3.5.2 A PEC rectangular Prism	206
3.5.3 RAM Coating and RCS Reduction	208
3.5.4 Realistic Targets and RCS Analysis	210
3.5.6 RCS / Antenna Pattern of Wire Arrays	213
3.6 RCS Measurements	215
3.7 Conclusions and Discussion	217
References	218

Chapter 4: Microwave Network Design

4.1 Introduction	221
4.2 Microstrip Networks	221
4.2.1 Transmission Line Theory	222

4.2.2	Characteristic Impedance	224
4.2.3	Voltage Reflection Coefficient	225
4.2.4	Standing Wave Ratio	225
4.2.5	Smith Chart and Impedance Matching	226
4.2.6	Scattering (S) Parameters	232
4.2.7	Modes	234
4.2.8	Waveguides	235
4.2.9	Microstrip Lines	237
4.3.	Sample Microwave Simulators	240
4.3.1	The Structure of F-MSTRIP	240
4.3.2	The Structure of TLMMS	244
4.3.3	Sample Scenarios and Typical Results	244
4.4	Numerical Examples	248
4.4.1	Effective Permittivity Simulations	248
4.4.2	Microstrip Impedance Matching	250
4.4.3	Microstrip Broadband Filter	251
4.4.4	Microstrip Coupler	253
4.4.5	Radial Stubs / Butterfly	254
4.5	Conclusions and Discussion	255
	References	256

Chapter 5: EMC / BEM Modeling

(with M. Orhan Özyalçın)

5.1	Introduction	257
5.2	EMC and Shielding Effectiveness (SE)	261
5.2.1	Aperture Leakage and SE	262
5.2.2	Multi-Aperture Leakage and SE	265
5.3	BEM and Specific Absorption Rate (SAR)	266
5.3.1	Calculation of Radiated and Absorbed Powers	269
5.3.2	Peak SAR Calculations	275
5.3.3	SAR Simulations with Discrete Human Head Model	280
5.4	Calibration Against Analytical Exact Solutions	285
5.4.1	A PEC Resonators and Green's Function Representation	285
5.4.2	PEC Resonators and TE_{10p} Solutions	288
5.4.3	FDTD and TLM Codes and Validation	289
5.5	Time-Domain Simulators	295
5.5.1	FDSE and TLMSE Packages	295
5.5.2	FDSAR and TLMSAR Packages	300
5.6	Conclusions and Discussions	305
	References	305

Chapter 6: Radar Simulation

6.1	Introduction	309
6.2	HFSWR Characteristics	314
6.2.1	HFSWR Equation	314
6.2.2	Antenna Gain	315

6.2.3	<i>Ocean Clutter</i>	316
6.2.4	Radar Resolution Cell	318
6.2.5	Surface Wave Propagation	319
6.2.6	Mixed-path Propagation	320
6.2.7	Noise Density	321
6.2.8	Ionospheric Self -interference	323
6.2.9	Spectrum Occupancy	323
6.2.10	Target Reflectivity	325
6.2.11	Antenna Requirements	326
6.2.12	Digital Beam Synthesis	327
6.3	HFSWR Parameter Selection	328
6.3.1	Basic Parameters	328
6.3.2	Numerical Design Example	331
6.4	Stochastic Modeling of HFSWR Signal Environment	333
6.5	A Sample Simulator	336
6.5.1	Scenario Editor	337
6.5.2	HFSWR Simulator	339
6.5.3	Detection Process	341
6.5.4	<i>Tracking Process</i>	343
6.6	Integrated Surveillance, Monte Carlo Simulation	346
6.7	Conclusions and discussion	349
	References	350

Appendix A: Electromagnetic Fundamentals

A.1	Maxwell Equations	353
A.2	Boundary Conditions	355
A.3	Radiation Condition and Edge Condition	355
A.4	Duality Relations	356
A.5	Time-Harmonic Case	356
A.6	Scattered field Formalism	357
A.7	Wave Polarization	357
A.8	EM Sources	358
A.9	Plane-Wave assumption	358
A.10	EM Power and Force	358
A.11	Equivalence Principle	359
A.12	Strategies for Wave Field Solutions	360
A.13	Sturm - Liouville Problem	361
A.14	Green's Function Representation	362
A.15	Wave Equation in 1D	363
A.16	Stoke's Theorem	363
A.17	Divergence Theorem (Gauss Law)	363
A.18	Ampere's Law	364
A.19	Well-Posed Problem	364
	References	364
