Information Technology: Transmission, Processing, and Storage

Coded Modulation Systems

John B. Anderson
and
Arne Svensson

Contents

1. Introduction to Coded Modulation **1**
1.1. Some Digital Communication Concepts 1
1.2. A Brief History 8
1.3. Classes of Coded Modulation 11
1.4. The Plan of the Book 13
Bibliography 15

2. Modulation Theory **17**
2.1. Introduction 17
2.2. Baseband Pulses 19
2.2.1. Nyquist Pulses 19
2.2.2. Orthogonal Pulses 22
2.2.3. Eye Patterns and Intersymbol Interference 24
2.3. Signal Space Analysis 26
2.3.1. The Maximum Likelihood Receiver and Signal Space 26
2.3.2. AWGN Error Probability 29
2.4. Basic Receivers 34
2.5. Carrier Modulation 37
2.5.1. Quadrature Modulation – PSK 38
2.5.2. Quadrature Modulation – QAM 47
2.5.3. Non-quadrature Modulation – FSK and CPM 49
2.6. Synchronization 52
2.6.1. Phase-lock Loops 53
2.6.2. Synchronizer Circuits 56
2.7. Spectra 58
2.7.1. Linear Modulation Spectra 58
2.7.2. The General Spectrum Problem 61
2.8. Discrete-time Channel Models 65
2.8.1. Models for Orthogonal Pulse Modulation 66
2.8.2. Models for Non-orthogonal Pulse Signaling: ISI 68
2.9. Problems 72
Bibliography 73

3. Coding and Information Theory 75
3.1. Introduction 75
3.2. Parity-check Codes 76
3.2.1. Parity-check Basics 76
3.2.2. BCH and Reed–Solomon Codes 80
3.2.3. Decoding Performance and Coding Gain 82
3.3. Trellis Codes 84
3.3.1. Convolutional Codes 85
3.3.2. Code Trellises 90
3.4. Decoding 95
3.4.1. Trellis Decoders and the Viterbi Algorithm 95
3.4.2. Iterative Decoding and the BCJR Algorithm 101
3.5. The Shannon Theory of Channels 106
3.6. Capacity, Cut-off Rate, and Error Exponent 110
3.6.1. Channel Capacity 110
3.6.2. Capacity for Channels with Defined Bandwidth 117
3.6.3. Capacity of Gaussian Channels Incorporating a Linear Filter 121
3.6.4. Cut-off Rate and Error Exponent 126
3.7. Problems 129
Bibliography 130

4. Set-partition Coding 133
4.1. Introduction 133
4.2. Basics of Set Partitioning 136
4.2.1. An Introductory Example 137
4.2.2. Constellation and Subset Design 139
4.3. Set-partition Codes Based on Convolutional Codes 150
4.3.1. Standard TCM Schemes 150
4.3.2. Rotational Invariance 157
4.3.3. Error Estimates, Viterbi Decoding, and the Free Distance Calculation 165
4.4. Lattice Codes 171
4.4.1. Lattice Ideas 172
4.4.2. Improved Lattices in Two or More Dimensions 175
4.4.3. Set-partition Codes Based on Multidimensional Lattices 179
4.5. QAM-like Codes Without Set Partitioning 182
4.6. Problems 186
Bibliography 188

5. Continuous-phase Modulation Coding 191
5.1. Introduction 191
5.2. CPM Distances 197
5.2.1. Bounds on Minimum Euclidean Distance 197

5.2.2. Calculation of Minimum Euclidean Distance 213
5.2.3. Trellis Structure and Error Estimates 220
5.3 CPM Spectra 225
5.3.1. A General Numerical Spectral Calculation 226
5.3.2. Some Numerical Results 232
5.3.3. Energy–Bandwidth Performance 240
5.4 Receivers and Transmitters 244
5.4.1. Optimal Coherent Receivers 246
5.4.2. Partially Coherent and Noncoherent Receivers 251
5.4.3. CPM Phase Synchronization 261
5.4.4. Transmitters 266
5.5. Simplified Receivers 268
5.5.1. Pulse Simplification at the Receiver 269
5.5.2. The Average-matched Filter Receiver 272
5.5.3. Reduced-search Receivers via the M-algorithm 273
5.5.4. MSK-type Receivers 275
5.6. Problems 277
Bibliography 279

6 PRS Coded Modulation 283
6.1. Introduction 283
6.2. Modeling and MLSE for ISI and Linear Coded Modulation 284
6.2.1. A Modeling Framework for PRS Coding and ISI 285
6.2.2. Maximum Likelihood Reception and Minimum Distance ... 289
6.3. Distance and Spectrum in PRS Codes 293
6.3.1. Basic PRS Transforms 294
6.3.2. Autocorrelation and Euclidean Distance 298
6.3.3. Bandwidth and Autocorrelation 303
6.4. Optimal PRS Codes 309
6.5. Coded Modulation by Outright Filtering 319
6.5.1. Faster-than-Nyquist Signaling 320
6.5.2. Euclidean Distance of Filtered CPM Signals 321
6.5.3. Critical Difference Sequences at Narrow Bandwidth 326
6.5.4. Simple Modulation Plus Severe Filtering 329
6.6. PRS Receivers 333
6.6.1. Review of Equalizers 333
6.6.2. Reduced-search Trellis Decoders 338
6.6.3. Breadth-first Decoding with Infinite Response Codes 345
6.7. Problems 348
Bibliography 350
Appendix 6A Tables of Optimal PRS Codes 351
Appendix 6B Said's Solution for Optimal Codes 358

7. Introduction to Fading Channels 363
7.1. Introduction 363
7.2. Propagation Path Loss 364
7.2.1. Free Space Path Loss 364
7.2.2. Plane Earth Path Loss 365
7.2.3. General Path Loss Model 366
7.3 Fading Distributions 368
7.3.1. Shadow Fading Distribution 369
7.3.2. Multipath Fading Distribution 370
7.3.3. Other Fading Distributions 372
7.4 Frequency Selective Fading 375
7.4.1. Doppler Frequency 375
7.4.2. Delay Spread 376
7.4.3. Coherence Bandwidth and Coherence Time 379
7.4.4. Fading Spectrum 383
7.4.5. Types of Multipath Fading 385
7.5. Fading Simulators 386
7.5.1. Flat Rayleigh Fading by the Filtering Method 387
7.5.2. Other Methods for Generating a Rayleigh Fading Process .. 391
7.5.3. Fading with Other Distributions 393
7.5.4. Frequency Selective Fading 395
7.6. Behavior of Modulation Under Fading 396
7.7. Interleaving and Diversity 400
7.7.1. Diversity Combining 400
7.7.2. Ways to Obtain Diversity 408
Bibliography 412

8. Trellis Coding on Fading Channels 415
8.1. Introduction 415
8.2. Optimum Distance Spectrum Feed-forward Convolutional Codes 416
8.3. Rate Compatible Convolutional (RCC) Codes 419
8.3.1. Rate Compatible Punctured Convolutional Codes 420
8.3.2. Rate Compatible Repetition Convolutional Codes 422
8.3.3. Rate Compatible Nested Convolutional Codes 423
8.4. Rate Matching 424
8.5. TCM on Fading Channels 426
8.5.1. Performance of TCM on Fading Channels 427
8.5.2. Design of TCM on Fading Channels 431
8.6. DSSS and CDMA 435
8.6.1. DSSS 435
8.6.2. Direct-Sequence CDMA 439
8.6.3. Code Design 441

8.6.4. Multiuser Detection in CS-CDMA 449
8.6.5. Final Remark on SS and CDMA 454
8.7 Generalized Hybrid ARQ 454
8.7.1. Simple ARQ 454
8.7.2. Hybrid Type-I ARQ 458
8.7.3. Hybrid Type-II ARQ 461
8.7.4. Hybrid Type-II ARQ with Adaptive Modulation 468
Bibliography 470
