# Transmission Systems Design Handbook for

# Wireless Networks

# Contents

	<b>Acknowledgments</b>	<b><i>xix</i></b>
<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Basics of Wireless Networks</b>	<b>5</b>
2.1	Historical Background	5
2.2	Existing Wireless Technologies	6
2.2.1	Mobile Networks and the Wireless Local Loop	6
2.2.2	Analog Cellular Systems	7
2.2.3	FDMA	9
2.2.4	TDMA	9
2.2.5	Personal Digital Cellular	10
2.2.6	GSM and General Packet Radio Services	10
2.2.7	CDMA	13
2.3	Evolution of Wireless Technology	15
2.3.1	1G and 2G Wireless Networks	15
2.3.2	3G Wireless Networks	15

2.3.3	CDMA2000	19
2.3.4	CDMA2000 1xEV-DO	22
2.3.5	Future Directions	24
2.4	Satellite Networks	26
2.4.1	Fixed Satellite Service	26
2.4.2	Mobile Satellite Systems	27
2.5	Fixed Microwave Systems	28
2.5.1	Microwave Point-to-Point Systems	28
2.5.2	Microwave Point-to-Multipoint Systems	31
	References	44
<b>3</b>	<b>Transmission-Network Principles</b>	<b>47</b>
3.1	Wireline Side of Wireless Networks	47
3.1.1	PSTN Interconnect and Telephony Overview	47
3.1.2	Traffic Engineering	51
3.1.3	SS7 and AIN	54
3.1.4	Telecommunications Act of 1996	58
3.2	Digital Transmission Technology	59
3.2.1	About the Transmission	59
3.2.2	Transmission Media—Physical Layer	59
3.2.3	Transmission (Backhaul) in Wireless Networks	61
3.2.4	DSX-1 Digital Interfaces (North America)	62
3.2.5	North American Digital Hierarchy	63
3.2.6	CEPT Digital Hierarchy	65
3.3	Plesiochronous Versus Synchronous Digital Hierarchy	66
3.4	Multiplexing and Inverse Multiplexing	70
3.4.1	Statistical Multiplexing	72
3.4.2	3/1 Multiplexing and Subrate Multiplexing	73
3.4.3	Inverse Multiplexing	74
3.5	ATM	79
3.5.1	ATM Basics	79

---

3.5.2	Use of ATM Adaptation Layer	83
3.5.3	Inverse-Multiplexing for ATM Protocol	86
3.5.4	QoS in ATM Networks	87
3.5.5	Definition of Availability in ATM	89
3.6	Voice over IP	91
3.6.1	H.323 Network Building Blocks	91
3.6.2	Latency and Jitter Issues	95
3.6.3	Multiprotocol Label Switching	97
3.6.4	IP-Based Wireless Networks	99
3.7	Complete T1 Tutorial	102
3.7.1	Signals in a T1 Network	102
3.7.2	Pulse Transmission	105
3.7.3	BERs	105
3.7.4	Overall System Length	106
3.7.5	Single-Cable and Dual-Cable Operation	107
3.7.6	T1 Repeatered Lines	107
3.7.7	Order Wire	110
3.7.8	Lightning	110
3.7.9	Simplex Power Design	112
3.7.10	Data Error Rates	114
3.7.11	Voltage and Temperature Factors	115
3.7.12	T1 Engineering, Installation, and Documentation	116
3.7.13	Troubleshooting and Problem Classification	116
3.7.14	Switch Options, Line Codes, and Framing	118
3.7.15	Fractional T1	118
3.7.16	T1 (J1) in Japan	118
3.8	Complete E1 Tutorial	119
3.8.1	Introduction to E1 Networks	119
3.8.2	Customer Premises Equipment	119
3.8.3	Signal Characteristics	120
3.8.4	Transmission Facilities	120
3.8.5	Pulse Density	121
3.8.6	HDB3	121

3.8.7	E1 Framing Synchronization	122
3.8.8	E1 Framing Formats	122
3.8.9	Spare Bits	124
3.8.10	Global Framing Formats	127
	References	127
<b>4</b>	<b><u>Wireless-Network Architecture</u></b>	<b>129</b>
4.1	2G Wireless-Network Architecture	129
4.2	3G Wireless-Network Architecture	131
4.2.1	Directions in 3G Developments	131
4.2.2	Horizontally Layered Network Architecture	136
4.2.3	3G Core Network	140
4.2.4	Universal Mobile Telephone System	141
4.2.5	3G in GSM Networks	141
4.2.6	3G CDMA Network	142
4.2.7	3G Traffic Classes	145
4.3	3G Transmission Networks	148
4.3.1	Replacing TDM with ATM in Transmission Networks	148
4.3.2	Importance of AAL2	154
4.3.3	QoS Concept	158
4.3.4	ATM Physical Layer	161
4.3.5	Traffic Modeling and Simulation Tools	165
4.3.6	2G and 3G Coexistence	168
4.3.7	Transmission-Network Architecture	170
	References	179
<b>5</b>	<b><u>Theory and Principles of Fiber-Optic Transmission</u></b>	<b>181</b>
5.1	Basics of Fiber-Optic Transmission	181
5.2	Design Principles	183
5.2.1	Bandwidth and Attenuation	183
5.2.2	Optical Power Budgets and Distance Calculations	185
5.3	Synchronous Digital Hierarchy	189

---

5.3.1	Basics of Synchronous Systems	189
5.3.2	Benefits of SONET	191
5.3.3	SONET Architecture	191
5.3.4	SONET Availability Requirements	195
5.3.5	SDH	195
5.4	DWDM	196
5.4.1	DWDM Overview	196
5.4.2	DWDM Capacity (Bandwidth) Requirements	197
5.4.3	Network Growth and Flexibility of DWDM	198
5.4.4	Optical Layers	200
5.4.5	Protection in DWDM Networks	200
5.5	Optical Switching	201
	References	202
<b>6</b>	<b>Microwave Point-to-Point System Design</b>	<b>203</b>
6.1	Basic Microwave Transmission Theory	203
6.2	Theoretical Aspects of Microwave Link Design	206
6.2.1	Microwave-Radio-Path Calculation Overview	206
6.2.2	Design Fade Margins	207
6.2.3	Diversity Improvement	210
6.2.4	North American and ITU Objectives	212
6.2.5	Reliability and Availability Overview	215
6.2.6	Effects of Rain on Microwave Propagation	217
6.3	Practical Aspects of Microwave-Link Design	219
6.3.1	Design Overview	219
6.3.2	Protected and Nonprotected Microwave Systems	221
6.3.3	Microwave Repeaters	222
6.3.4	Microwave Path Calculations	224
6.3.5	Microwave Interference Analysis and Frequency Coordination	225
6.3.6	Microwave System Design Guidelines	226
6.3.7	Microwave Lookup Table	229

6.4	Spread-Spectrum Microwave Systems	230
6.5	Microwave Compatibility and Safety	236
6.6	Coordinate Systems, Datums, and GPS	240
6.6.1	About Datums	240
6.6.2	Geometric Earth Models	241
6.6.3	Reference Ellipsoids and Coordinate Systems	242
6.6.4	GPS	244
6.6.5	Useful Facts to Remember	247
6.7	Managing the MW Radio Network	247
6.7.1	Introduction	247
6.7.2	Managing a Microwave Network with SNMP	249
	References	254
<b>7</b>	<b>Transmission-Network Planning and Design</b>	<b>257</b>
7.1	Overview	257
7.2	General Wireless-Network Planning and Design Principles	259
7.2.1	Identifying the Opportunity and Strategic Planning	259
7.2.2	Customer Requirements Analysis	262
7.2.3	Interconnection	265
7.2.4	Spectrum Auctions	266
7.2.5	Clearing Spectrum and Microwave Relocation	267
7.2.6	RF Design	268
7.2.7	Transmission Media and Topology Planning	270
7.2.8	Mobile Positioning	271
7.2.9	Toll QoS	272
7.2.10	Network Performance	273
7.2.11	Sales and Marketing	276
7.2.12	Regulatory Issues	278
7.2.13	Life Cycle of Wireless Networks	281
7.3	Transmission System Design	283

---

7.3.1	Transmission System Design Process and Requirements	283
7.3.2	SDH and PDH Transmission Systems	286
7.3.3	SDH Transmission-Network Protection	286
7.3.4	Ring Protection in the Wireless Network	288
7.3.5	Description of TND Deliverables	289
7.4	Leased Lines in Wireless Networks	292
7.4.1	Leased Access and Core Transmission Networks	293
7.4.2	Dedicated Leased Service	294
7.4.3	xDSL	296
7.4.4	Switched Leased Service	297
7.4.5	Higher-Speed Switched and Nonswitched Services	299
7.4.6	Leased Lines Network Build Out	299
7.4.7	Owned Versus Leased Transmission Networks	301
7.5	Synchronization—Stratum, BITS, and GPS	302
7.5.1	Introduction and Historical Overview	302
7.5.2	Strata	304
7.5.3	General Timing Planning Rules in Transmission Networks	308
7.5.4	Interoffice Distribution	310
7.5.5	Intraoffice Distribution	312
7.5.6	SONET Network Timing	313
7.5.7	Synchronization: Issues in PCS Networks	314
7.5.8	Cell-Site Timing in Wireless Networks	316
7.6	Transmission-Network Optimization	317
7.6.1	Daisy Chaining and Traffic Grooming	317
7.6.2	Voice Compression	318
7.6.3	Signal Propagation Delay	321
7.6.4	Example of Optimized Network Design	323
7.7	Transmission Network: Design Examples	324
7.7.1	Small PDH Microwave Transmission Network	324
7.7.2	Complex Transmission Network	325

7.8	Overview of RNC Dimensioning in the 3G Wireless Network	327
7.8.1	Traffic Classes in the UTRAN Network	328
7.8.2	Description of RNC Interfaces	329
7.8.3	User Traffic Modeling	332
7.8.4	Traffic Calculation Guidelines	334
7.8.5	Example of Traffic Calculations	342
7.9	Alternative Solutions in Transmission Networks	344
7.9.1	Considering Dark Fiber and Dark Copper	344
7.9.2	Partnership with Utilities	344
7.9.3	Optical Laser Communications	348
	References	350
<b>8</b>	<b><u>Transmission Equipment</u></b>	<b>351</b>
8.1	Digital Microwave Radio	351
8.1.1	PDH and SDH Microwave Radios	351
8.1.2	Standard Microwave Radio Configuration	352
8.1.3	Split Microwave Radio Configuration	353
8.1.4	Microwave Antennas	358
8.1.5	Transmission Lines	361
8.1.6	Environmental and Quality Issues	362
8.1.7	Standards and Recommendations	363
8.2	Fiber-Optic Equipment	363
8.2.1	SONET and SDH	363
8.2.2	OPGW	368
8.3	Wireline Equipment	370
8.3.1	Digital-Access Cross Connects	370
8.3.2	CSU/DSU	375
8.3.3	DSL and ADSL	376
8.3.4	Echo Cancellers	379
8.4	Cabling	384
8.4.1	NEC Cable Categorization	384

---

8.4.2	Digital Cross Connects	386
8.4.3	DS1 Signal Termination	388
8.4.4	Leased Lines and the Network Interface Unit	392
8.5	Grounding	392
8.5.1	Earth Grounding Basics	392
8.5.2	Ground System Design Fundamentals	395
8.5.3	Types of Grounding	396
8.5.4	Grounding for Wireless Cell Sites	398
8.6	Power and Battery Backup	399
8.6.1	ac Power	399
8.6.2	dc Power	400
8.6.3	Batteries	401
8.6.4	Solar Energy	403
8.7	GPS Antennas	405
8.8	Quality and Reliability Issues	405
8.8.1	Quality Assurance	405
8.8.2	First Article Inspection	406
8.8.3	Factory Acceptance Testing	407
8.8.4	Equipment Reliability	407
8.8.5	Environmental Specifications	410
8.8.6	Network Equipment Building Standard	411
