

mobile communications series

Rudi Bekkers

Mobile Telecommunications Standards

GSM, UMTS,
TETRA, and
ERMES

Contents

Preface	xvii
Acknowledgments	xix
Chapter 1 Introduction	1
1.1 OVERVIEW	1
1.2 IMT-2000 AND THE ROLE OF SATCOM AND LMS	2
1.2.1 Global coverage	2
1.2.2 Terrestrial alternative or gap-filling in IMT-2000	3
1.2.3 Enable IMT-2000 and the role of LMS	3
1.2.4 Communication architecture employing LMS	3
1.3 MULTIMEDIA INFORMATION SERVICES	5
1.4 IP AND ATM NETWORKS	6
1.5 PREVIEW OF THE BOOK	7
1.6 SUMMARY	9
REFERENCES	9
Chapter 2 Overview of Land Mobile Satellite Communication	11
2.1 INTRODUCTION	11
2.1.1 Characteristics and limits of LMS systems	11
2.2 GENERAL ORBITAL CONSIDERATIONS (LEO, MEO, OR GEO)	13
2.2.1 General satellite orbital model	14
2.2.2 Orbital period	15
2.2.3 Coverage, beamwidth, and range	16
2.2.4 Intersatellite crosslinks	17
2.3 FREQUENCY ALLOCATIONS AND REGULATORY ISSUES	18
2.4 INTERFERENCE CONSTRAINTS	20
2.4.1 Interference limits	20
2.4.2 MSS space-to-Earth band (2,170–2,200 MHz)	20
2.4.3 MSS Earth-to-space band (2,170–2,200 MHz)	20
2.4.4 Satellite unwanted emissions	21
2.4.5 User terminal unwanted emissions	21
2.4.6 WLANs and short-range wireless links in the ISM band	21

3.1.1	Ownership and Financial Relationship	50
3.1.2	Regulatory Relationship	51
3.1.3	Public Interests Relationship	51
3.1.4	Legal Relationship	52
3.2	The Relation Between the Manufacturers and the PTT Administrations	54
3.2.1	The Organization of the Supply Industry	54
3.2.2	Strategies for Manufacturers	56
3.2.3	Obtaining Operating Concessions, Vertical Integration by Manufacturers	57
3.2.4	Cartel Agreements, Procurement Practices, and Fixed Market Shares	58
3.2.5	Intellectual Property Rights	66
3.3	The Relation Between Governments and Manufacturers	73
3.3.1	Direct Governmental Intervention	74
3.3.2	Favoring National Suppliers	75
3.3.3	Favoring Foreign Companies That Are Related to the National Industry	75
3.3.4	Granting Export Credits	76
3.3.5	Subsidizing Research and Development	76
3.3.6	Granting Compensation Orders	77
3.4	Other Actors	78
3.4.1	Users of Telecommunications Services	78
3.4.2	European Community	79
3.4.3	Standardization Institutes and Cooperation Bodies	79
3.5	Summary of the Influence of the Historical Setting on the Current Sector Dynamics	80
	References	83
Chapter 4	Telecommunications Policy and Regulation in the EC	87
4.1	Establishing a Competitive Telecommunications Market	87
4.1.1	Phase 1: Introduction of Competition (1987–1992)	88
4.1.2	Phase 2: Abolition of Exclusive and Special Rights and Implementation of Full Competition (1992–1998)	90
4.1.3	Phase 3: Revision of the Regulatory Framework (from 1998)	91
4.2	Outlines of the EC Telecommunications Policy	92
4.2.1	Liberalization	92
4.2.2	Harmonization	94
4.2.3	Competition Policy	98
4.3	Regulatory Aspects Relevant to the Success of Standards	99

4.3.1	Radio Frequency Spectrum	100
4.3.2	Numbering	102
4.3.3	Licenses	105
4.3.4	Terminal Equipment Type Approval	106
4.3.5	Procurement	111
4.3.6	Market-Specific Measures	114
4.4	The Influence of EC Regulatory Measures on the Success Chances of Standards	115
4.5	Future Changes in Relation to the Newly Proposed EC Regulatory Measures	116
	References	118
Chapter 5	The Institutional Setting for Standardization	121
5.1	Early International Agreements	122
5.1.1	Telegraph Conventions	123
5.1.2	Radiotelegraphy Conventions	124
5.2	The International Telecommunication Union	125
5.2.1	A Brief History of the ITU	126
5.2.2	ITU Membership and Financial Contributions	127
5.2.3	ITU Decision-Making Structure	130
5.2.4	Organization of the ITU	131
5.2.5	ITU Standardization Activities	136
5.3	The European Conference of Postal and Telecommunications Administrations (CEPT)	139
5.3.1	Standardization Within CEPT	140
5.3.2	The Relation Between CEPT and the European Community	142
5.3.3	Changes to CEPT in the Late 1980s and the 1990s	143
5.4	The European Telecommunications Standardisation Institute (ETSI)	147
5.4.1	The Establishment of ETSI	147
5.4.2	ETSI Membership and Financial Contributions	148
5.4.3	ETSI Decision Structure	152
5.4.4	Organization of ETSI	155
5.4.5	ETSI Standards	159
5.4.6	The Relation Between ETSI and Other Actors	165
5.4.7	ETSI and Competition Law	169
5.4.8	ETSI and the WTO Agreement	169
5.5	Non-European Telecommunications Standards Bodies	170
5.5.1	The Standardization Framework in the United States	170
5.5.2	The Standardization Framework in Japan	174

5.5.3	Telecommunications Technology Association (TTA) of Korea	176
5.5.4	China Wireless Telecommunication Standard (CWTS) Group	177
	References	177
Chapter 6	The Economics of Compatibility Standards	183
6.1	Definition and Classification of Standards and Standardization	183
6.1.1	Classification by the Source of the Standard	185
6.1.2	Classification by the Level of Enforceability of the Standard	186
6.1.3	Classification by the Inclusion of IPR in a Standard	187
6.1.4	Classification by the Availability of a Standard	188
6.1.5	Overview of the Definitions of Standards and Interfaces Used in This Research	190
6.2	Compatibility Standards and Networks	190
6.3	Features and Phenomena of Compatibility Standards	192
6.3.1	Network Externalities	193
6.3.2	Gateway Technologies and Interconnection	199
6.3.3	Lock-in Effects and Switching Costs	202
6.3.4	Path Dependence	204
6.3.5	Bandwagon Effects	208
6.3.6	Competition Between Compatibility Standards	209
6.3.7	Backward, Forward, and Sideways Compatibility, and Modularity	211
6.4	The Relation Between the Various Phenomena	212
6.5	Overview of the Hypotheses	213
6.6	The Benefits and Costs of Compatibility Standards	213
	References	218
Chapter 7	Intellectual Property Rights and Standards	221
7.1	The Relation Between Standards and IPR	221
7.1.1	The Growing Relevance of IPRs in the Telecommunications Sector	223
7.1.2	Essential IPR	225
7.2	Strategies of IPR Holders	227
7.2.1	Prestandardization Phase	228
7.2.2	Standards Production Phase	229
7.2.3	Standards Diffusion Phase	230

7.3	Real-Life Risks for Conflicts Between IPRs and Standards	232
7.4	IPR Policies and Practices of Standardization Bodies	233
7.4.1	IPR Policies of the Traditional Standardization Bodies	234
7.4.2	IPR Policy of ETSI	234
7.5	IPR Strategies, IPR Policies, and Competition Law	241
7.5.1	Behavior of IPR Holders and EC Community Law	242
7.5.2	Agreements Between IPR Holders and Licensees and EC Community Law	248
7.5.3	Behavior of ETSI and EC Community Law	248
7.6	New Organizational Approaches to IPRs in Standards	249
	References	255
Chapter 8	Case Study: The Second-Generation Mobile Telephony Standard GSM	261
8.1	The Relevant Actors	261
8.2	Historical Background	265
8.3	The Development Phase	272
8.3.1	Initiation of the GSM Standard	273
8.3.2	Early Technical Research and Interventions by National Governments	276
8.3.3	Technical, Economic, and Strategic Design Issues	278
8.3.4	The Decision Process for the Basic Technical Properties	285
8.3.5	The Transfer of the Standardization Process to ETSI	293
8.3.6	The Development of the DCS-1800, PCS-1900, and GSM-400 Variant	296
8.4	The Adoption Phase	299
8.4.1	The Increasing Support from Telecommunications Suppliers	300
8.4.2	Supporting Measures by the European Community	301
8.4.3	The GSM Memorandum of Understanding (MoU)	307
8.4.4	Infrastructure Development and Procurement	313
8.4.5	Terminal Development and Type Approval Issues	320
8.4.6	Intellectual Property Rights Issues	321
8.5	The Diffusion Phase	327
8.5.1	GSM Network Operations Beyond Europe	327
8.5.2	Supply Market Structure	329
8.5.3	Non-European Companies on the Supply Market	334
8.5.4	The Upgrading of the Standard	339

8.6	Competing Standards on the Worldwide Market: D-AMPS, cdmaOne, and PDC	347
8.6.1	The American D-AMPS Standard	347
8.6.2	The American cdmaOne Standard	351
8.6.3	The Japanese PDC Standard	353
8.7	The Positions of the Different Actors Involved	355
	References	358
Chapter 9	Case Study: The Digital Mobile Radio Standard TETRA	363
9.1	The Relevant Actors	364
9.2	Historical Background	365
9.3	Development and Standardization Phase	372
9.3.1	Initiation of the TETRA Standard	372
9.3.2	Changes in Market Perception	373
9.3.3	The Decision Process for the Basic Technical Properties	378
9.3.4	Finalizing the TETRA Standard	381
9.3.5	The Competing Tetrapol Standard	385
9.3.6	Other Competing Standards	388
9.3.7	The Relation of TETRA with the American APCO-25 Project	389
9.3.8	Relation of TETRA and Standards Bodies in Other Parts of the World	390
9.3.9	Frequency Issues	390
9.4	The Adoption Phase	393
9.4.1	Measures of the EC	393
9.4.2	The TETRA MoU	394
9.4.3	Adoptions of TETRA and Tetrapol for Public Safety Networks (Procurement)	395
9.4.4	Adoptions of TETRA and Tetrapol for Large-Area Public Networks (PAMR)	398
9.4.5	Adoptions of TETRA and Tetrapol for Private Local Networks (PMR)	400
9.4.6	Infrastructure and Terminal Development	401
9.4.7	Intellectual Property Rights Issues	402
9.5	The Positions of the Different Actors Involved	406
	References	408
Chapter 10	Case Study: The High-Speed Paging Standard ERMES	413
10.1	The Relevant Actors	413
10.2	Historical Background	415
10.2.1	Paging Technology up to the 1990s	418

10.2.2 The First Roaming Paging Services	422
10.3 Development and Standardization Phase	423
10.3.1 Initiation of the ERMES Standard	423
10.3.2 The Decision Process for the Basic Technical Properties	426
10.3.3 Finalizing the ERMES Standard	428
10.3.4 Competing High-Speed Paging Standards	429
10.3.5 The Wake of Two-Way Paging Technology	432
10.4 The Adoption Phase	435
10.4.1 Measures of the EC	435
10.4.2 The ERMES MoU	437
10.4.3 The European Public Paging Association (EPPA)	438
10.4.4 Adoption of the EC Regulatory Measures Concerning ERMES	439
10.4.5 Adoption of ERMES by Operators	440
10.4.6 Adoption of Other High-Speed Paging Standards	443
10.4.7 Infrastructure and Terminal Development	444
10.4.8 Intellectual Property Rights Issues	446
10.5 The Positions of the Different Actors Involved	447
References	449

Chapter 11 Case Study: The Third-Generation Mobile Telephony Standard UMTS	453
11.1 The Relevant Actors	453
11.2 Regional Development and Standardization	455
11.2.1 Introduction to UMTS Functionalities and Services	456
11.2.2 Europe's Early Research	458
11.2.3 The EC and the Establishment of the UMTS Forum	461
11.2.4 Japan Takes over the Lead	462
11.2.5 Europe's Reaction to the Japanese Moves	465
11.2.6 Developments in the United States	467
11.2.7 Policy and Regulatory Measures by the European Community	469
11.2.8 Deciding upon the Technology for European UMTS	471
11.2.9 Frequency Reservations for Third-Generation Systems	477
11.3 Worldwide Alignment	478
11.3.1 The Third Generation Partnership Project (3GPP)	480
11.3.2 The Third Generation Partnership Project 2 (3GPP2)	481

11.3.3 The Attempts to Establish a Worldwide ITU Standard	481
11.3.4 Deadlock by Intellectual Property Rights	485
11.3.5 ITU Decision upon IMT-2000 and the Dénouement of the IPR Problems	487
11.3.6 The Operators Harmonization Group (OHG)	488
11.3.7 Continuation of the Standardization Work on UMTS in the Near Future	491
11.4 The Adoption Phase	491
11.4.1 Adoption in Europe	491
11.4.2 Adoption in Japan	493
11.4.3 Adoption in the United States	493
11.4.4 Adoption in Other World Regions	493
References	494
Chapter 12 Analysis of the Cases	499
12.1 Success Measurement of the Studied Standards	501
12.1.1 GSM Success Measurement	502
12.1.2 TETRA Success Measurement	507
12.1.3 ERMES Success Measurement	510
12.1.4 UMTS Success Measurement	512
12.1.5 Summary of the Success Levels of the Cases	514
12.1.6 Note Concerning the Uncertainties of the Estimates	514
12.2 Regulatory Context	515
12.2.1 Standard-Specific EC Directives, Recommendations, and Decisions	516
12.2.2 Other EC Activities Related to Standards	519
12.2.3 Availability of Allocatable Frequency Spectrum	520
12.2.4 Availability of Allocatable Numbers	521
12.2.5 Type Approval Regime	521
12.2.6 Procurement Regime	522
12.2.7 Compulsory Status of Standards	523
12.2.8 Regulatory Situation in the Rest of the World	524
12.3 Standardization Context	524
12.3.1 Initiation Process, Locus of Control, EC Idealism, and Disproportionate Representation	525
12.3.2 Geographical Scope	527
12.3.3 Differing Technical Preferences, Withdrawal, and Standards War	528
12.3.4 Balancing the Interests of Actors, Compromises, Power Battle Problem	529

12.3.5 Performance of Standards Bodies	531
12.3.6 Responsiveness to Upgrading Standards	533
12.3.7 Reforms and PAS	533
12.4 Economic Context	534
12.4.1 Network Externalities and Gateways	534
12.4.2 Lock-in Effects	537
12.4.3 Bandwagon Effects	541
12.4.4 Positive Effects of Competition	542
12.4.5 Negative Effects of Competition	543
12.4.6 Modularity	544
12.4.7 Backward-Compatibility	544
12.4.8 Testing and Redefining the Economic Hypotheses	546
12.5 IPR Context	546
12.5.1 IPRs That Block or Obstruct Standards	547
12.5.2 Firms' IPR Strategies	547
12.5.3 Standards Bodies and Their IPR Policies	548
12.5.4 The Influence of IPR on Technology Decisions	549
12.5.5 IPR and Supply Market Structure	550
12.6 Market and Technological Context	551
12.6.1 Added Value over Existing Standards	552
12.6.2 Service Substitution	553
References	553
Chapter 13 Conclusions and Discussion	557
13.1 Conclusions Concerning the Success Factors for Standards	557
13.2 Conclusions Concerning EC Policy	559
13.2.1 EC Policy and the Success of Standards	559
13.2.2 An Assessment of the Policy Pursued by the EC During the 1980s and 1990s	562
13.2.3 Recommendation for a New EC Mobile Telecommunications Policy	563
13.3 Conclusions Concerning ETSI	566
13.4 Discussion: ETSI-Dominated Institutional Standards Setting Versus Full Competition Between Standards	569
13.5 Recommendations for Future Research	572
References	573

Appendix A: Design Characteristics of Selected GSM Demonstration Systems	575
Appendix B: IPR Events Relating to UMTS	577
References	581
Appendix C: Overview of Terminology for Third-Generation Networks	583
Appendix D: Overview of Digital Cellular Standards Worldwide	585
Appendix E: Chronological List of EC Legislation and Communications	587
List of Acronyms	595
About the Author	603
Index	605
