ENGINEERING,
COMMUNICATIONS,
AND RADAR

CONTENTS

PREFACE	xix
ACKNOWLEDGMENTS	xxi

PART 1 MATHEMATICAL MODELING IN RADIO ENGINEERING

Chapter 1	DETERMINISTIC MODELING	3
1.1	Basic Definitions	3
1.2	Mathematical Description of Signals	4
1.2.1	Time-Domain Description	7
1.2.2	Frequency-Domain Description	18
1.3	Mathematical Description of Noise	28
1.3.1	External Noise	28
1.3.2	Intrinsic Noise	28
1.3.3	Active Devices Noise	29
1.3.4	Digital Circuits Noise	29
1.4	Mathematical Description of Signal Processing	30
1.4.1	Basic Models of Signal Processing Filters	30
1.4.2	The Impulse Response	31
1.4.3	The Transfer Function	31
Chapter 2	STOCHASTIC MODELING	35
<i>Statistical synthesis of random functions</i>		
2.1	Random Events and Variables	35
2.1.1	Statistical Description	35
2.1.2	Simulation Algorithms	54
2.2	Random Processes	60
2.2.1	Statistical Description	60
2.2.2	Simulation Algorithms	75

2.3	Random Fields	91
2.3.1	Statistical Description	91
2.3.2	Simulation Algorithms	95
<i>Statistical analysis of random functions</i>		
2.4	Estimation of Random Function Parameters	98
2.4.1	Analysis of a Stationary Random Process	98
2.4.2	Analysis of a Nonstationary Random Process	102
2.4.3	Analysis of the Distribution Functions	103
2.5	The Random Processes and RF Circuits	104
2.5.1	Linear Circuits	104
2.5.2	Nonlinear Circuits	108
2.5.3	Random Narrowband Signal	111
Chapter 3	METHODS OF MODELING	115
3.1	Method of Carrier Frequency	115
3.1.1	Narrowband Signal Modeling	115
3.1.2	Modeling of Common Devices and Circuits	116
3.1.3	Simplified Algorithms	117
3.2	Method of Complex Envelope	118
3.2.1	Modeling of the Stationary Linear Circuits	118
3.2.2	Modeling of the Nonstationary Linear Circuits	122
3.2.3	Modeling of Inertialess Nonlinear Circuits	123
3.2.4	Modeling of Inertial-Type Nonlinear Circuits	127
3.2.5	Modeling of Common Devices and Circuits	131
3.3	Method of Statistical Equivalents	134
3.3.1	Method of Analytical Description	134
3.3.2	Method of Statistical Linearization	134
3.3.3	Method of Generation	140
3.3.4	Method of Filtration	141
3.3.5	Method of Information Parameter	144
3.4	Mathematical Description of Circuit Components	145
References		147
Selected Bibliography		148

PART 2 RADAR SYSTEM SIMULATION

Chapter 4	RADAR CROSS SECTION	153
4.1	Effective RCS	153
4.1.1	Description	153
4.1.2	Input Data	153
4.1.3	Model	153
4.1.4	Output Data	154
4.1.5	References	154
4.1.6	Examples	154
4.2	RCS Fluctuations	155
4.2.1	Description	155

4.2.2	Input Data	155
4.2.3	Model	155
4.2.4	Output Data	156
4.2.5	References	156
4.2.6	Examples	156
4.3	RCS of a Target for a Bistatic Radar	158
4.3.1	Description	158
4.3.2	Input Data	158
4.3.3	Model	158
4.3.4	Output Data	159
4.3.5	References	159
4.3.6	Examples	159
4.4	RCS of Aircraft and Ships	160
4.4.1	Description	160
4.4.2	Input Data	160
4.4.3	Model	160
4.4.4	Output Data	160
4.4.5	References	161
4.4.6	Examples	161
4.5	RCS of Antennas	162
4.5.1	Description	162
4.5.2	Input Data	162
4.5.3	Model	162
4.5.4	Output Data	162
4.5.5	References	162
4.5.6	Examples	162
4.6	RCS of Birds and Insects	163
4.6.1	Description	163
4.6.2	Input Data	163
4.6.3	Model	163
4.6.4	Output Data	163
4.6.5	References	163
4.6.6	Examples	163
4.7	RCS of Simple Shapes	164
4.7.1	Description	164
4.7.2	Input Data	164
4.7.3	Model	166
4.7.4	Output Data	170
4.7.5	References	170
Chapter 5	ANTENNAS AND PROPAGATION	171
5.1	Antenna Patterns and Gain	171
5.1.1	Description	171
5.1.2	Input Data	171
5.1.3	Model	172
5.1.4	Output Data	173

5.1.5	Reference	173
5.1.6	Examples	173
5.2	Phased-Array Patterns and Gain	175
5.2.1	Description	175
5.2.2	Input Data	175
5.2.3	Model	176
5.2.4	Output Data	178
5.2.5	Reference	178
5.2.6	Examples	179
5.3	Pattern-Propagation Factor	180
5.3.1	Description	180
5.3.2	Input Data	180
5.3.3	Model	181
5.3.4	Output Data	190
5.3.5	References	190
Chapter 6	WAVEFORMS AND SIGNAL PROCESSING	191
6.1	Pulsed Waveform Generation	191
6.1.1	Description	191
6.1.2	Input Data	191
6.1.3	Model	192
6.1.4	References	196
6.1.5	Output Data	197
6.1.6	Examples	198
6.2	Digital Pulse Compression	202
6.2.1	Description	202
6.2.2	Input Data	202
6.2.3	Model	203
6.2.4	Output Data	215
6.2.5	References	215
6.2.6	Examples	216
6.3	Frequency-Selective Filtering	217
6.3.1	Description	217
6.3.2	Input Data	217
6.3.3	Model	218
6.3.4	References	226
6.3.5	Output Data	227
6.3.6	Examples	228
Chapter 7	DETECTION AND INTEGRATION	231
7.1	Probability of Detection and False Alarm	231
7.1.1	Description	231
7.1.2	Input Data	231
7.1.3	Model	231
7.1.4	Output Data	233
7.1.5	References	233

7.2	Detectability Factor	234
7.2.1	Description	234
7.2.2	Input Data	234
7.2.3	Model	234
7.2.4	Output Data	236
7.2.5	References	236
7.3	Minimum Detectable Signal	237
7.3.1	Description	237
7.3.2	Input Data	237
7.3.3	Model	237
7.3.4	Output Data	237
7.3.5	Reference	237
7.4	M-out-of-N Integration	238
7.4.1	Description	238
7.4.2	Input Data	238
7.4.3	Model	238
7.4.4	Output Data	239
7.4.5	References	239
Chapter 8	LOSSES	241
8.1	Atmospheric Attenuation Loss	241
8.1.1	Description	241
8.1.2	Input Data	241
8.1.3	Model	242
8.1.4	Output Data	248
8.1.5	References	248
8.2	Beamshape Loss	249
8.2.1	Description	249
8.2.2	Input Data	249
8.2.3	Model	249
8.2.4	Output Data	251
8.2.5	Reference	251
8.3	CFAR Loss	252
8.3.1	Description	252
8.3.2	Input Data	252
8.3.3	Model	253
8.3.4	Output Data	254
8.3.5	References	254
8.4	Fluctuation Loss	255
8.4.1	Description	255
8.4.2	Input Data	255
8.4.3	Model	255
8.4.4	Output Data	256
8.4.5	References	256
8.5	Integration Loss	257
8.5.1	Description	257

8.5.2	Input Data	257
8.5.3	Model	257
8.5.4	Output Data	257
8.5.5	References	257
8.6	MTI Processing Loss	258
8.6.1	Description	258
8.6.2	Input Data	258
8.6.3	Model	258
8.6.4	Output Data	262
8.6.5	References	262
8.7	Propagation Loss	263
8.7.1	Description	263
8.7.2	Input Data	263
8.7.3	Model	263
8.7.4	Output Data	263
8.7.5	Reference	263
8.8	Quantization Loss	264
8.8.1	Description	264
8.8.2	Input Data	264
8.8.3	Model	264
8.8.4	Output Data	264
8.8.5	Reference	264
8.9	Straddling Losses	265
8.9.1	Description	265
8.9.2	Input Data	265
8.9.3	Model	265
8.9.4	Output Data	266
8.9.5	Reference	266
8.9.6	Examples	266
8.10	Pulse Compression Weighting Loss	267
8.10.1	Description	267
8.10.2	Input Data	267
8.10.3	Model	267
8.10.4	Output Data	268
8.10.5	Reference	268
8.11	Clutter Distribution Loss	269
8.11.1	Description	269
8.11.2	Input Data	269
8.11.3	Model	269
8.11.4	Output Data	270
8.11.5	References	270
Chapter 9	MAXIMUM DETECTION RANGE	271
9.1	Maximum Detection Range for a Generic Pulsed Radar	271
9.1.1	Description	271

9.1.2	Input Data	271
9.1.3	Model	272
9.1.4	Output Data	274
9.1.5	References	274
9.1.6	Examples	274
9.2	Maximum Detection Range for a Generic Pulsed Radar in a Clutter Environment	275
9.2.1	Description	275
9.2.2	Input Data	275
9.2.3	Model	277
9.2.4	Output Data	282
9.2.5	References	282
9.3	Maximum Detection Range for a Generic Pulsed Radar in a Jamming Environment	283
9.3.1	Description	283
9.3.2	Input Data	283
9.3.3	Model	284
9.3.4	Output Data	289
9.3.5	Reference	289
9.4	Maximum Detection Range for an Altimeter	290
9.4.1	Description	290
9.4.2	Input Data	290
9.4.3	Model	290
9.4.4	Output Data	292
9.4.5	Reference	292
9.5	Maximum Detection Range for a Bistatic Radar	293
9.5.1	Description	293
9.5.2	Input Data	293
9.5.3	Model	293
9.5.4	Output Data	295
9.5.5	Reference	295
9.6	Maximum Detection Range for a Laser Radar	296
9.6.1	Description	296
9.6.2	Input Data	296
9.6.3	Model	296
9.6.4	Output Data	297
9.6.5	Reference	297
9.7	Maximum Detection Range for a Meteorological Radar	298
9.7.1	Description	298
9.7.2	Input Data	298
9.7.3	Model	299
9.7.4	Output Data	300
9.7.5	Reference	300
9.8	Maximum Detection Range for a Search Radar	301
9.8.1	Description	301
9.8.2	Input Data	301

9.8.3	Model	301
9.8.4	Output Data	302
9.8.5	Reference	302
9.9	System Operating Range for a Secondary Radar	303
9.9.1	Description	303
9.9.2	Input Data	303
9.9.3	Model	304
9.9.4	Output Data	306
9.9.5	Reference	306
9.10	Maximum Detection Range for a Synthetic-Aperture Radar	307
9.10.1	Description	307
9.10.2	Input Data	307
9.10.3	Model	307
9.10.4	Output Data	308
9.10.5	Reference	308
9.11	Maximum Detection Range for a Tracking Radar	309
9.11.1	Description	309
9.11.2	Input Data	309
9.11.3	Model	310
9.11.4	Output Data	311
9.11.5	References	311
Chapter 10	MEASUREMENT ERRORS	313
10.1	Angle Measurement Error	313
10.1.1	Description	313
10.1.2	Input Data	313
10.1.3	Model	314
10.1.4	Output Data	316
10.1.5	References	316
10.1.6	Examples	317
10.2	Range Measurement Error	318
10.2.1	Description	318
10.2.2	Input Data	318
10.2.3	Model	319
10.2.4	Output Data	320
10.2.5	References	320
10.2.6	Examples	321
10.3	Velocity Measurement Error	322
10.3.1	Description	322
10.3.2	Input Data	322
10.3.3	Model	323
10.3.4	Output Data	324
10.3.5	References	324
10.3.6	Examples	325
10.4	Propagation Errors	326

10.3.6	Examples	325
10.4	Propagation Errors	326
10.4.1	Description	326
10.4.2	Input Data	326
10.4.3	Model	327
10.4.4	Output Data	331
10.4.5	References	331
10.5	Platform-Dependent Errors	332
10.5.1	Description	332
10.5.2	Input Data	332
10.5.3	Model	332
10.5.4	Output Data	335
10.5.5	References	335
10.5.6	Examples	337
Chapter 11	NOISE AND INTERFERENCE IMMUNITY	339
11.1	Noise and Interference Simulation	339
11.1.1	Description	339
11.1.2	Input Data	339
11.1.3	Model	341
11.1.4	Output Data	343
11.1.5	Reference	343
11.1.6	Examples	343
11.2	Receiving System Noise Figure	346
11.2.1	Description	346
11.2.2	Input Data	346
11.2.3	Model	346
11.2.4	Output Data	350
11.2.5	Reference	350
11.2.6	Examples	351
11.3	Signal-to-Interference Ratio	352
11.3.1	Description	352
11.3.2	Input Data	352
11.3.3	Model	356
11.3.4	Output Data	363
11.3.5	Reference	363
11.4	System Noise Temperature	364
11.4.1	Description	364
11.4.2	Input Data	364
11.4.3	Model	364
11.4.4	Output Data	366
11.4.5	References	366
11.5	MTI, Limitations to Performance	367
11.5.1	Description	367
11.5.2	Input Data	367
11.5.3	Model	368

11.5.6	Examples	371
11.6	Subclutter Visibility	372
11.6.1	Description	372
11.6.2	Input Data	372
11.6.3	Model	373
11.6.4	Output Data	380
11.6.5	References	380

APPENDICES

Appendix 1	Notations and Special Functions Used in the Handbook	383
Appendix 2	The Major Features of Delta Function	386
Appendix 3	Signal Models Based on Elementary Time-Domain Functions	387
Appendix 4	The Decomposition Models of the Signals	389
Appendix 5	Basic Features of the Discrete Fourier Transform	391
Appendix 6	The Fast Fourier Transform Models	392
Appendix 7	Z-Transform of Some Common Functions	394
Appendix 8	Active Device Noise	395
Appendix 9	Recursive and Nonrecursive Filter Frequency Responses	397
Appendix 10	The Transfer Functions of a Pair of Cascaded Filters	398
Appendix 11	The Distribution Laws for the Discrete Random Variables	399
Appendix 12	The Distribution Laws for the Continuous Random Variables	402
Appendix 13	Integral Forms for Gaussian Distribution	414
Appendix 14	The Moments of Random Variables	416
Appendix 15	Moments of Discrete Random Variables	418
Appendix 16	Moments of Continuous Random Variables	419
Appendix 17	The Functional Transform of Random Variables	422
Appendix 18	Probability Density Function of Sum, Difference, Product, and Quotient of Two Random Variables	425
Appendix 19	Simulation Algorithms for Common Distributions	427
Appendix 20	Basic Simulation Algorithms to Generate Random Variables with Gaussian Distribution	429
Appendix 21	Simulation Algorithms Based on a Rigorous Solution for the Reciprocal Functions	430
Appendix 22	Simulation Algorithms Derived by Means of Gamma Distribution	432
Appendix 23	Common Correlation Functions and Spectra of the Stationary Random Processes	434
Appendix 24	The Derivatives of the Random Process	435
Appendix 25	A Gaussian Random Process	436
Appendix 26	The Models of Common Pulses in Time and Frequency Domains	438

Appendix 27	The Spectral Densities for Common Pulsed Random Processes	440
Appendix 28	Probability Density Functions and Spectral Densities for Common Pulse Amplitude Distributions	442
Appendix 29	Spectral Densities for the Stationary Pulse Trains	444
Appendix 30	Spectral Densities of the Stationary Pulse Trains for Various Types of Modulation and Distribution of Pulse Parameters	446
Appendix 31	Simulation Algorithms Based on Recurrent Methods for the Stationary Processes with Common Correlation Functions	451
Appendix 32	Equations and Frequency Responses of the Formation Filter for the Stationary Processes with Common Correlation Functions	453
Appendix 33	Simulation Algorithm for a Three-Dimensional Gaussian Markovian Random Process	456
Appendix 34	Simulation Algorithms Based on the Discrete Models of Linear Systems (Formation Filters)	457
Appendix 35	Simulation Algorithms for the Vector Modulus and the Unit Vector	458
Appendix 36	Algorithms to Estimate Basic Parameters of a Stationary Ergodic Random Process	460
Appendix 37	Algorithms to Estimate the First Four Moments of a Nonstationary Random Process	461
Appendix 38	The Mathematical Expectations and Correlation Functions Based on Impulse Response Representation	462
Appendix 39	The Impulse and Frequency Responses for Common Linear Circuits	463
Appendix 40	The Normalized Correlation Functions and Spectral Densities at the Output of Common Linear Circuits	468
Appendix 41	The Characteristics of Nonlinear Circuits	470
Appendix 42	Stochastic Parameters of the Sum of Random Noise and Deterministic Signal	472
Appendix 43	The Coefficients for Different Types of Modulation	474
Appendix 44	Mathematical Models of Radio Devices at the Block Diagram Level	476
Appendix 45	Simplification of the Transfer Function Model	480
Appendix 46	The Coefficients for Nonlinear Circuits	482
Appendix 47	Mathematical Models for Common Devices and Circuits	483
Appendix 48	Statistical Linearization Coefficients	488
Appendix 49	Mathematical Models of RCL	490
