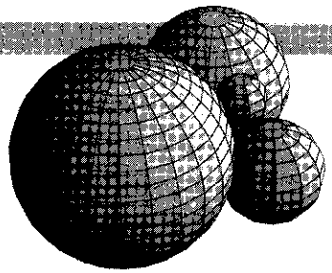
COMPUTING WITH
MATHEMATICA®
SECOND EDITION
INCLUDES
CD-ROM

Contents



Preface *xiii*

Part I Learning the Basics *1*

Mathematica Basics: An Introduction *3*

Introduction 3
Arithmetic 3
Mathematical Functions 5
Symbolic Computations 6
Exact and Approximate Solutions for Equations 7
Graphs of Functions of One Variable 9
Graphs of Parametric Equations 10
Graphs of Surfaces in Three Dimensions 11
Graphs of Contour Curves for Surfaces 11
Matrix Algebra 12
Random Numbers 13
Exercises 14

Mathematica Basics: Help *19*

Introduction 19
The ? and ?? Operators 19
The Help Browser 20
Interrupting Mathematica Computations 21
Memory Management in Mathematica 21
Exercises 22

Mathematica Basics: Notebooks 25
Introduction 25
Notebook Toolbars 25
Format Preferences 25
Page Break Preferences 26
Cell Groupings 26
Tag Names 27
Links 28
In/Out Names 28
Hyperlinks to Documentation 29
Exercises 29

Associated Notebook on CD-ROM: Cell Hierarchy
CellHierarchy.nb

Mathematica Basics: Text and Typesetting 31
Introduction 31
The BasicTypesetting and CompleteCharacters Palettes 31
Algebraic Manipulation Palette 33
Basic Input Palette 34
Basic Calculations Palette 34
Exercises 35

Mathematica Basics: Packages 37
Introduction 37
Loading Standard Packages 37
Forgetting to Load a Package 39
Exercises 41

Part II Designing Functions 43

Values, Variables, and Assignments 45
Introduction 45
The Immediate Assignment Operator = for Values 46
The Delayed Assignment Operator := for Functions 49
Evaluation Issues for the Immediate and Delayed Assignment Operators 53

Computational Efficiency and the Assignment Operators 56
Exercises 58

Functions 63

Introduction 63
Functions with a Single Argument 63
Functions with Several Arguments 69
Functions with Structured Arguments 71
Functions with Default Values for Arguments 75
Functions with a Varying Number of Arguments 80
Exercises 81

Recursive Definitions 87

Introduction 87
Functions with a Single Recursive Argument 87
Functions with Several Recursive Arguments 92
Limitations to Recursive Computations 95
Exercises 99

Substitution Rules and Optional Arguments 107

Introduction 107
Substitution Rules and the Replacement Mechanism 107
Substitution Rules and Interactive Computations 110
Options for Built-in Functions 111
Defining an Option for a Function 114
Exercises 117

Four Spheres Packing Problem 119

Introduction 119
Analysis of the Problem 119
Computational Solution of the Problem 120
Graphic Rendering of the Solution 121
Exercises 123

Associated Notebook on CD-ROM: Two-dimensional Views of the Spheres

Views2D.nb

Cross-sectional View of Two Touching Spheres
Vertical Projection of Three Touching Spheres

Associated Folder on CD-ROM: Four Spheres Drawings
Views2D-Drawings.nb
Evaluation of Views2D.nb
SphereDrawings.nb
Evaluation of "Graphic Rendering of Solution"

Part III Designing Programs ***125***

List Processing Functions ***127***
Introduction 127
Processing Lists with the Map[ ] Function 127
Applications of the Map[ ] Function to Graphics Objects 134
List Manipulation, Element Extraction, and the Fold[ ] Function 140
The Functions Head[ ], Apply[ ], Outer[ ], Depth[ ], and Position[ ] 146
Exercises 153

Iterations with Loops ***159***
Introduction 159
Using the Do[ ] Loop: Basics 159
Using the Do[ ] Loop: A Hula Hoop Animation 163
Using the While[ ] Loop: Basics 165
Using the While[ ] Loop: Termination Conditions and the Bisection Method 167
Using the For[ ] Loop: Basics 170
Using List Processing Functions as Alternatives for Loops 173
The Collatz Function 175
Exercises 176

Computations with Modules and Local Variables ***181***
Introduction 181
Using the Module[ ] Function: Basics 181
Using the Module[ ] Function: Returning Numbers and Lists 184
Using the Module[ ] Function: Rendering Graphics Objects 188
Exercises 191

Part IV Exploring Advanced Features 197

Advanced Mathematica: Options 199

Introduction 199
Defining a Single Option for a Function 199
Defining Several Options for a Function 204
Using Built-in Graphics Options in User-Defined Functions 208
Defining Options for One Function That Are Options in Several Other Functions 211
Exercises 216

Advanced Mathematica: Hyperlinks and Buttons 221

Introduction 221
Hyperlinks within a Notebook 221
Jumps within a Notebook without Hyperlinks 222
Hyperlinks between Notebooks 222
Hyperlinks to the Help Browser 222
Hyperlinks to Internet Resources 223
Hyperlinks as Buttons 224
Creating a Typesetting Palette 225
Creating a Palette of Expressions 227
Creating a Palette of Characters and Expressions 228
Creating an Evaluation Palette 229
Printing a Palette 231
Exercises 231

Associated Notebook on CD-ROM: Target of a Hyperlink
JumpTarget.nb

Associated Folder on CD-ROM: Sample Palettes
n-CompleteCharacters.nb
p-Pi.nb and n-Pi.nb
p-Trig.nb and n-Trig.nb
p-Logic.nb and n-Logic.nb
p-Evaluate.nb and n-Evaluate.nb

Advanced Mathematica: Packages 233

Introduction 233
Contexts and Names 233

Initialization Cells 236
The Basic Scheme of a Package 236
Package Files 244
A Package for an Iteration Function 247
A Package for Gram-Schmidt Orthogonalization 250
Loading Packages 254
Exercises 256
Associated Folder on CD-ROM: PackagesSupport
InitCellA.nb and InitCellA.m
InitCellM.nb and InitCellM.m
Template.nb and Template.m
Thermometer.nb and Thermometer.m
Iteration.nb and Iteration.m
GramSchmidt.nb and GramSchmidt.m

Advanced Mathematica: Files, Data Exchange, and Conversions 261
Introduction 261
Directories and File Paths 262
Import and Export of Data 263
Conversions to Other File Formats 266
Protected Functions 267
Exercises 270

Associated Folder on CD-ROM:DataTests
Survey.xls
Files generated from the notebook:
GoodAges.dat
SortedAges.dat
Std100CSV
Std100Lines
Std100List
Std100Table
Std100.xls
SortedAges.xls

Associated Folder on CD-ROM: HTMLDemos
SphereCenters.nb
SphereCenters Folder:
contains the files generated by Mathematica
SphereDrawings.nb

SphereDrawings Folder:
contains the files generated by Mathematica
Views2D-Drawings.nb
Views2D-Drawings Folder:
contains the files generated by Mathematica

Part V Student Projects 273

Student Projects 275

Introduction 277
Arnold's Cat Map and Chaotic Mapping 280
Bouncing Balls 281
Collatz's Function 282
Conway's Challenge Sequence 283
Exponentially Damped Surfaces 284
Finite Automata 285
Fractals and Chaotic Boundary Sets 286
Fractals and Iterated Function Systems 288
Geometric Optics and Lens Systems 289
Groups of Rigid Motions 290
Growth Rates of Functions 291
Harmonic Coupled Oscillations 292
Hidden Patterns 293
Implementation of a Package 294
Interpolation of Curves with Cubic Splines 295
Juggling Balls 296
Leasing a Car 297
Markov Chains and Dynamic Models 298
Moiré Fringes 299
Oscillating Mass System 301
Pell's Equation 302
Public Key Cryptography 303
Rainbows 305
Recurrence Relations 306
Spanning Trees of a Graph 307

Associated Folder on CD-ROM: ProjectsSupport
Deterministic Finite Automata:

DFAIntro.nb and DFA.m

Iterated Function Systems
IFSIntro.nb and IFS.m

Local Parametric Splines

LPSIntro.nb and LPS.m

Public Key Cryptography
RSAIntro.nb and RSA.m

Index *309*
