CONTENTS

METALS AND CHEMICAL CHANGE

David Johnson and Kiki Warr

1	INTRODUCTION	13
	1.1 Metals and their physical properties	13
	1.2 Summary of Section 1	16
2	REACTIONS OF METALS	17
	2.1 Oxidation and reduction	18
	2.2 Oxidation of metals by aqueous hydrogen ions	20
	2.3 Reactions of metals with aqueous metal ions	23
	2.4 Reactions of metals with oxygen and the halogens	25
	2.5 Summary of Section 2	26
3	METALS AND THEIR ORES	27
	3.1 Mercury	28
	3.2 Tin	31
	3.3 Aluminium	32
	3.4 Summary of Section 3	36
4	METALS AND THEIR EASE OF OXIDATION: A HYPOTHESIS	37
	4.1 A critical look at the hypothesis	38
	4.2 Summary of Section 4	40
5	EQUILIBRIUM: A RESTATEMENT OF THE PROBLEM	41
6	THOMSEN'S HYPOTHESIS: TOWARDS A SOLUTION?	42
	6.1 Summary of Sections 5 and 6	44
7	THE SECOND LAW OF THERMODYNAMICS: THE SOLUTION	45
	7.1 Entropy	46
	7.2 The direction of heat flow	47
	7.3 The direction of chemical change	48
	7.4 Summary of Section 7	51

8	THE FIRST LAW OF THERMODYNAMICS	52
8.1	The enthalpy change for a pure substance	52
8.2	Measuring enthalpy changes: calorimetry	56
8.3	Molar enthalpy changes	60
8.4	Summary of Section 8	62
9	ENTHALPIES OF REACTION: A DATABASE	63
9.1	Hess's law	63
9.2	Standard enthalpy changes	64
9.3	Standard enthalpies of formation	65
9.3.1	Enthalpies of formation of pure substances	65
9.3.2	Calculating standard enthalpies of reaction	66
9.3.3	Standard enthalpies of formation of aqueous ions	68
9.4	Summary of Section 9	70
10	ENTROPY CHANGES	71
10.1	Determining entropy changes	71
10.2	Entropy changes for phase transitions	71
10.3	Entropy changes of substances with temperature	73
10.4	Absolute entropies: the third law of thermodynamics	79
10.5	Absolute entropy of chlorine gas at 298.15 K	80
10.6	Absolute entropies in the <i>Data Book</i>	82
10.7	The entropy change for a reaction	82
10.8	Summary of Section 10	83
11	THE GIBBS FUNCTION	84
11.1	The Gibbs function and the equilibrium constant	85
11.2	Final survey of the thermodynamic database	87
11.3	Summary of Section 11	90
12	METALS AND THEIR EASE OF OXIDATION	91
12.1	Metals and their aqueous ions	92
12.2	Summary of Section 12	96
13	THERMODYNAMIC AND KINETIC STABILITY	98
13.1	Summary of Section 13	101
14	REACTIVITY	102

15 THERMODYNAMICS AND THE OXIDATION OF METALS	104
15.1 Some consequences of Table 15.1	106
15.1.1 Ball lightning	106
15.2 Summary of Sections 14 and 15	108
16 ENTHALPY AND ENTROPY TERMS	110
16.1 Reactions of solids and gases: the sign of ΔS_m^\ominus	112
16.2 Summary of Section 16	113
17 METALS AND THEIR ORES	114
17.1 The variation of ΔG_m^\ominus with temperature	115
17.2 Carbon as a reducing agent	118
17.3 A survey of metal extraction methods	119
17.4 Summary of Section 17	121
18 THE BORN-HABER CYCLE	122
18.1 Comparing sodium and silver halides	125
18.2 Summary of Section 18	126
19 INTRODUCTION TO THE REMAINING SECTIONS	128
20 THE LATTICE ENERGY	129
20.1 The energy of interaction between two ions	130
20.2 The lattice energy of an ionic crystal	132
20.3 Applying the Born-Landé equation	134
20.4 The Kapustinskii equation	135
20.5 A more general Born-Haber cycle	136
20.6 Summary of Section 20	138
21 ELECTROCHEMICAL CELLS AND REDOX POTENTIALS	139
22 IONIZATION ENERGIES OF ATOMS	143
22.1 Changes in ionization energy down a Group	146
22.2 Summary of Section 22	147

23	THE CHEMISTRY OF GROUP I: THE ALKALI ELEMENTS	148
23.1	The alkali metals	149
23.1.1	The alkali metals in liquid ammonia	151
23.2	Summary of Section 23	153
24	ALKALI METAL COMPOUNDS IN INDUSTRY	154
24.1	Manufacture of sodium hydroxide and chlorine	155
24.1.1	The membrane cell	156
24.2	Uses of sodium hydroxide and sodium carbonate	158
24.3	Summary of Section 24	159
25	BINARY ALKALI METAL COMPOUNDS WITH NON-METALS	160
25.1	Alkali metal halides	160
25.2	Oxygen compounds of the alkali metals	161
25.2.1	The relative stability of peroxides and oxides	163
25.3	Hydrides and nitrides of the alkali metals	167
25.4	Summary of Section 25	168
26	METAL IONS, LIGANDS AND COMPLEXES	170
26.1	Metal complexes	170
26.2	The anatomy of a complex	173
26.3	Summary of Section 26	175
27	ALKALI METAL COMPLEXES	176
27.1	Alkali metal anions	180
27.2	Summary of Section 27	183
28	THE GROUP II OR ALKALINE EARTH ELEMENTS	184
28.1	The alkaline earth metals	185
28.2	Why are there no Group II monohalides?	188
28.3	Group II in industry: lime and its applications	192
28.4	Oxides, hydroxides and carbonates of the Group II elements	197
28.5	Are the Group II dihalides ionic?	198
28.6	Complexes of Group II elements	200
28.7	Summary of Section 28	201

APPENDIX THERMODYNAMICS IN THIS BOOK	203
LEARNING OUTCOMES	205
QUESTIONS: ANSWERS AND COMMENTS	208
FURTHER READING	234
ACKNOWLEDGEMENTS	234

CASE STUDY: BATTERIES AND FUEL CELLS

Ronald Dell and David Johnson

1 INTRODUCTION	237
2 BATTERIES	240
3 BATTERY APPLICATIONS AND SIZES	241
4 CELL DISCHARGE AND CHARGE	243
5 BATTERY SPECIFICATION	246
5.1 Primary batteries	247
5.2 Secondary batteries	250
5.2.1 Lead-acid batteries	250
5.2.2 Alkaline batteries	251
5.2.3 Lithium batteries	252
6 DEGRADATION MODES IN BATTERIES	255
7 FUEL CELLS	256
ACKNOWLEDGEMENTS	260
INDEX	261
