CONTENTS

Chapter 1 Overview of Material Processing Automation	1
1. Constrained and Non-Constrained Material Processing	1
2. Multi-Facet Mechatronic Automation.....	2
3. Sensors for Material Processing.....	4
3.1 Measurands in Material Processing.....	4
3.2 Types of Sensors	7
3.3 Microsensors and Soft Sensors.....	8
4. Intelligent Control Techniques.....	10
4.1 Conventional Computer Numerical Control	10
4.2 Sensor Based Machine Tool Control.....	12
4.3 Open Architecture and Distributed Control	13
4.4 Intelligent Control and Computing Techniques	15
4.5 Human-Machine Interface.....	16
References.....	17
 Chapter 2 Process Development and Approach for 3D Profile	
Grinding/Polishing.....	19
1. Introduction.....	19
2. Profile Grinding and Polishing of Superalloys	21
2.1 Superalloy Components and Manual Blending.....	21
2.2 CNC Milling.....	25
2.3 Wheel Grinding	27
3. Force Control in Material Removal	29
3.1 Robot Holding Tool.....	30

3.2 Robot Holding Workpiece.....	31
4. Model-Based Robotic Machining	35
5. Part Variations and Process Dynamics	37
6. System Concept of Adaptive Robotic Blending System...	40
6.1 A Mechatronic Approach	40
6.2 Device and Process.....	41
6.3 Knowledge-Based Process Control (KBPC)	42
6.4 Data-Driven Supervisory Control (DDSC)	43
6.5 System Layout and Working Cycle.....	43
7. Process Optimisation.....	45
7.1 Grinding/Polishing Process Parameters	45
7.2 Tool Path Optimisation	46
7.3 Tool Wear Compensation.....	49
8. Concluding Remarks.....	51
References.....	52

Chapter 3 Adaptive Robotic System for 3D Profile Grinding/Polishing ..55

1. Introduction.....	55
2. Finishing Robot and Control Interface.....	57
2.1 Finishing Robot	57
2.2 Self-Aligned End Effector.....	57
2.3 Control Interface.....	59
3. In-Situ Profile Measurement.....	60
3.1 Off-Line versus In-Situ Approach.....	60
3.2 Sensor Techniques.....	61
3.3 Coordinate Transform	64
4. Template-Based Optimal Profile Fitting.....	65
4.1 Template Generation	65
4.2 Profile Fitting Requirements	67
4.3 A Fast Converging Minimisation Algorithm.....	70
4.4 Software Development	73
5. Adaptive Robot Path Planner	76

5.1	Definition of Tool Path.....	76
5.2	Derivation of End-Effector Orientation.....	77
5.3	Generation of Tool Path	79
6.	Implementation of SMART 3D Blending System.....	81
7.	Results.....	83
7.1	Dimension of Finish Profile	83
7.2	Surface Roughness and Finish Quality.....	85
7.3	Wall Thickness	87
8.	Concluding Remarks.....	88
	References.....	89

Chapter 4	Acoustic Emission Sensing and Signal Processing for Machining Monitoring and Control	91
1.	Introduction.....	91
2.	Sensors in Machining Process Monitoring.....	93
2.1	Motor Current & Power	94
2.2	Force/Torque	95
2.3	Vibration/Acceleration Signals	97
2.4	Optical and Vision System.....	98
3.	Acoustic Emission Sensing.....	99
3.1	Acoustic Emission Mechanism	100
3.2	Acoustic Emission in Machining.....	101
3.3	Acoustic Emission Sensors	104
4.	Advanced Signal Processing Techniques.....	107
4.1	Time Domain Analysis.....	109
4.2	Time Series Modelling	112
4.3	Frequency Domain Analysis	113
4.4	Time-Frequency Domain Analysis.....	114
4.5	Wavelet Analysis.....	116
5.	Conclusions.....	121
	References.....	122

Chapter 5 Techniques of Automatic Weld Seam Tracking	125
1. Introduction to Weld Seam Tracking	125
1.1 The Importance of Welding.....	125
1.2 What is Welding?	125
1.3 Automated Welding	127
1.4 Need for Seam Tracking.....	127
2. Through-the-Arc Sensing.....	128
2.1 Survey of Existing Methods	128
2.2 System Overview	132
2.3 Data Acquisition.....	133
2.4 Signal Processing	135
2.5 Robotic Welding System.....	136
2.6 Implementation of Seam Tracking Controller.....	138
2.6.1 The Algorithm.....	138
2.6.2 The PID Controller.....	139
2.7 Plant Identification and Control	139
3. Vision-Based Seam Tracking.....	143
3.1 The Technology.....	143
3.1.1 Triangulation Techniques.....	145
3.1.2 Measurement Range and Accuracy.....	145
3.1.3 The Principle of Laser Triangulation	146
3.2 Vision Based Seam Tracking Systems	146
3.2.1 System Architecture.....	147
3.2.2 Vista Weld Laser Camera	148
3.2.3 Two Beam Laser Camera.....	148
3.2.4 Laser 3D Vision Sensor	148
3.2.5 Point Laser Scanner.....	149
3.2.6 Laser Camera	149
3.2.7 Fanuc's MIG EYE.....	150
3.3 System Description.....	151
3.3.1 Hardware-System Layout.....	151
3.3.2 Sensor Hardware	152

3.3.3 Mounting of Sensor Head	153
3.3.4 Data Acquisition System.....	155
3.3.5 Software Overview.....	156
3.4 Image Acquisition and Processing	157
3.4.1 Structured Light Approach.....	157
3.4.2 Capturing the Image.....	158
3.4.3 Image Preprocessing	159
3.4.4 Erosion	160
3.4.5 Blobs Tool Control.....	160
3.5 Seam Detection Algorithms	161
3.6 Implementation and Experimental Results.....	162
3.6.1 Evaluating Accuracy of Seam Tracking.....	162
3.6.2 Evaluating the Overall Accuracy	164
4. Concluding Remarks	164
References.....	165

Chapter 6 Weld Pool Geometry Sensing and Control in Arc Welding ...	167
1. Introduction.....	167
2. Survey of Weld Pool Inspection	169
2.1 Weld Pool Oscillation	169
2.1.1 Sensing Principle.....	169
2.1.2 Theoretical Models.....	169
2.1.3 Pool Oscillation Detection	171
2.1.4 Results.....	172
2.1.5 Disadvantages	172
2.2 Ultrasound	173
2.2.1 Contact Transducer	173
2.2.2 Laser Array and EMAT Ultrasonic Measurement.....	174
2.3 Infrared Sensing	177
2.3.1 Theoretical Foundations.....	177
2.3.2 Infrared Sensing Technology	178

2.3.3 Results	178
2.3.4 Limitation.....	180
2.4 Surface Depression Sensing	180
2.4.1 Background	180
2.4.2 Sensing Technology	180
2.4.3 Image Processing	181
2.4.4 Results.....	182
2.4.5 Disadvantages	182
3. Weld Pool Vision and Control System	183
3.1 Controlled Welding Process.....	183
3.2 Weld Pool Vision System.....	184
3.3 Set-Up of Weld Pool Vision and Control System...	184
4. Weld Pool Geometry Extraction	186
4.1 Real-Time Weld Pool Geometry Extraction	186
4.2 Edge Detection	186
4.3 Connectivity Analysis	187
4.4 Relationship between Weld Pool Dimensions and Welding Parameters.....	188
5. Neurofuzzy Logic Control	189
5.1 Fuzzy Logic Control.....	189
5.2 Neurofuzzy Logic System.....	190
5.3 System Optimisation and Integration	193
6. Results.....	194
6.1 Simulation Results of Neurofuzzy Logic Control System.....	194
6.2 Closed-Loop Control of Welding Speed	194
7. Conclusions.....	197
References.....	197

Chapter 7 Automatic GTAW System Control and Teleoperation.....	201
1. Introduction – The Automatic Welding of High Performance Alloys.....	201
2. Special Considerations for Welding Titanium.....	202

2.1	GTAW for Titanium.....	202
2.2	Features of an Intelligent Welding System.....	204
2.3	Subsystems and Components	206
3.	Manipulator Configuration.....	207
3.1	Selection of Axes.....	207
3.2	The Experimental and Demonstration Welding Manipulator	209
3.3	Machine Kinematics.....	210
3.3.1	Assigning Coordinate Frames	210
3.3.2	Kinematic Simulation.....	213
3.3.3	Inverse Kinematics.....	216
3.3.4	Trajectory by Decomposition of Tool Transformation Matrix	217
4.	Process Control	219
4.1	Critical Process Parameters	220
4.2	Inert Gas Shielding.....	222
4.3	Other Procedures	222
4.4	Sensing and Monitoring	223
4.5	Schemes for Process Control.....	225
4.6	Use of AI in Automatic Welding.....	225
5.	CNC and Low-Level Control.....	227
6.	Interactive and Tele-Operated Welding System	229
6.1	Visual Monitoring	229
6.2	Computer Enhanced Vision.....	231
6.2.1	Modelling of Camera Views	231
6.2.2	Modelling of Solid Objects	233
6.2.3	Implementation in Simulation Software	234
6.2.4	Integration of Models and Welding Workpiece Images.....	238
7.	Conclusions.....	239
	References.....	240

Chapter 8	Laser Material Processing and Its Quality Monitoring and Control	243
1.	Introduction.....	243
1.1	Laser Equipment.....	243
1.2	Applications of Laser Material Processing.....	245
1.3	Automation of Laser Material Processing.....	246
1.3.1	In-Process Monitoring.....	247
1.3.2	In-Process Control.....	249
2.	Survey of Real-Time Laser Welding Quality Monitoring	250
2.1	Acoustic Emission.....	251
2.2	Audible Sound.....	252
2.3	Infrared Sensing	253
2.4	Ultraviolet Sensing	254
2.4.1	Ultraviolet Spectroscopic Analysis	255
2.4.2	Ultraviolet Signal Analysis	255
3.	Analysis of Optical and Acoustic Signals Emitted from Plasma and Sensor Design	257
3.1	Laser-Induced Plasma During Welding of Thin Metal Sheets	258
3.2	Optical Emission from Laser-Induced Plasma	260
3.3	Waves in Plasma	261
3.4	Design of Optical and Acoustic Sensors	263
4.	Signal Processing through FFT and Wavelet Analysis...	264
4.1	FFT Analysis	265
4.1.1	Frequency Characteristics of Optical and Acoustic Signals Using Magnetically Restrained Discharge Laser.....	265
4.1.2	Frequency Characteristics of Optical and Acoustic Signals of Differnet Defects.....	267
4.2	Wavelet Analysis of Audible Acoustic Emission Signals	275
4.2.1	Wavelet Decomposition of AE Signals.....	276

4.2.2	Results of Wavelet Analysis of AE Signal....	278
4.3	Definition and Applications of Detection Curve.....	280
4.3.1	Definition of Detection Curve.....	280
4.3.2	Example	281
5.	Real-Time Monitoring of Laser Welding by ANN.....	285
5.1	Structure of the Neural Network	285
5.1.1	Construction of Features	285
5.1.2	Improvement of Features	287
5.1.3	BP Network Parameters and Effect of Different Features.....	288
5.2	Performance of the Neural Network.....	291
5.3	Discussion	293
6.	Conclusions.....	293
	References.....	294
