

MASTERS SERIES IN PHYSICS AND ASTRONOMY

# QUANTUM THEORY OF SOLIDS

Eoin O'Reilly

# Contents

<i>Series Preface</i>	ix
<i>Preface</i>	xi
<b>1 Introduction and review of quantum mechanics</b>	<b>1</b>
1.1 <i>Introduction</i>	1
1.2 <i>Wave-particle duality</i>	2
1.3 <i>Wave quantisation</i>	4
1.4 <i>Heisenberg uncertainty principle</i>	5
1.5 <i>Schrödinger's equation</i>	6
1.6 <i>Expectation values and the momentum operator</i>	9
1.7 <i>Some properties of wavefunctions</i>	10
1.8 <i>The variational principle</i>	12
1.9 <i>The variational method in an infinite square well</i>	13
1.10 <i>The finite square well</i>	14
<b>2 Bonding in molecules and solids</b>	<b>19</b>
2.1 <i>Introduction</i>	19
2.2 <i>Double square well potential</i>	20
2.3 <i>The hydrogen molecule, <math>H_2</math></i>	26
2.4 <i>The diatomic LiH molecule</i>	30
2.5 <i>Tetrahedral bonding in Si crystals</i>	33
2.6 <i>Bonding in gallium arsenide</i>	36
2.7 <i>Trends in semiconductors</i>	36
<b>3 Band structure of solids</b>	<b>41</b>
3.1 <i>Introduction</i>	41
3.2 <i>Bloch's theorem and band structure for a periodic solid</i>	43
3.3 <i>The Kronig-Penney model</i>	46
3.4 <i>The tight-binding method</i>	51
3.5 <i>The nearly free electron method</i>	55

---

3.6	<i>Band structure of tetrahedral semiconductors</i>	61
3.7	<i>The use of 'pseudo' potentials</i>	63
4	<b>Band structure and defects in bulk semiconductors</b>	72
4.1	<i>Introduction</i>	72
4.2	<i><math>k \cdot p</math> theory for semiconductors</i>	76
4.3	<i>Electron and hole effective masses</i>	79
4.4	<i>Trends in semiconductors</i>	83
4.5	<i>Impurities in semiconductors</i>	84
4.6	<i>Amorphous semiconductors</i>	90
5	<b>Physics and applications of low-dimensional semiconductor structures</b>	95
5.1	<i>Introduction</i>	95
5.2	<i>Confined states in quantum wells, wires, and dots</i>	97
5.3	<i>Density of states in quantum wells, wires, and dots</i>	99
5.4	<i>Modulation doping and heterojunctions</i>	103
5.5	<i>Quantum Hall effect</i>	106
5.6	<i>Semiconductor laser action</i>	112
5.7	<i>Strained-layer lasers</i>	116
5.8	<i>Tunnelling structures and devices</i>	119
6	<b>Diamagnetism and paramagnetism</b>	128
6.1	<i>Introduction</i>	128
6.2	<i>Magnetisation</i>	128
6.3	<i>Magnetic moment of the electron</i>	130
6.4	<i>Diamagnetism in atoms and solids</i>	132
6.5	<i>Langevin (classical) theory of paramagnetism</i>	133
6.6	<i>Magnetic moments in isolated atoms and ions: Hund's rules</i>	136
6.7	<i>Brillouin (quantum mechanical) theory of paramagnetism</i>	139
6.8	<i>Paramagnetism in metals</i>	141
6.9	<i>Floating frogs</i>	143
7	<b>Ferromagnetism and magnetic order</b>	147
7.1	<i>Introduction</i>	147
7.2	<i>The exchange interaction</i>	148
7.3	<i>Ferromagnetism and the Curie temperature</i>	151
7.4	<i>Spontaneous magnetisation</i>	152
7.5	<i>Spontaneous magnetisation and susceptibility of an antiferromagnet</i>	153
7.6	<i>Ferrimagnetism</i>	157

7.7	<i>Spin waves – elementary magnetic excitations</i>	157
7.8	<i>Ferromagnetic domains</i>	160
7.9	<i>High-performance permanent magnets</i>	162
7.10	<i>Itinerant ferromagnetism</i>	166
7.11	<i>Giant magnetoresistance</i>	168
<b>8</b>	<b>Superconductivity</b>	<b>172</b>
8.1	<i>Introduction</i>	172
8.2	<i>Occurrence of superconductivity</i>	173
8.3	<i>Magnetic behaviour and Meissner effect</i>	175
8.4	<i>Type I and Type II superconductors</i>	176
8.5	<i>Electromagnetic momentum and the London equation</i>	178
8.6	<i>The Meissner effect</i>	181
8.7	<i>Application of thermodynamics</i>	183
8.8	<i>Cooper pairs and BCS theory</i>	187
8.9	<i>BCS coherence length</i>	192
8.10	<i>Persistent current and the superconducting wavefunction</i>	193
8.11	<i>Flux quantisation</i>	193
8.12	<i>Josephson tunnelling</i>	196
8.13	<i>AC Josephson effect</i>	198
8.14	<i>High-temperature superconductivity</i>	199
	<b>Appendices</b>	
A	<b>The variational method with an arbitrary parameter: the H atom</b>	<b>208</b>
B	<b>The hydrogen atom and the Periodic Table</b>	<b>211</b>
C	<b>First and second order perturbation theory</b>	<b>218</b>
	C.1 <i>Introduction to perturbation theory</i>	218
	C.2 <i>First order perturbation theory</i>	219
	C.3 <i>Second order perturbation theory</i>	222
D	<b>Dirac notation</b>	<b>227</b>
E	<b>Bloch's theorem and <math>k \cdot p</math> theory</b>	<b>229</b>
	<b>Outline solutions to problems</b>	<b>232</b>
	<i>Index</i>	<b>243</b>
