TENTH EDITION

Elementary Surveying

An Introduction to Geomatics

Paul R. Wolf • Charles D. Ghilani

Contents

PREFACE

xxiii

1 • INTRODUCTION

1

1-1	Definition of Surveying	1
1-2	Geomatics	2
1-3	History of Surveying	3
1-4	Geodetic and Plane Surveys	7
1-5	Importance of Surveying	9
1-6	Specialized Types of Surveys	10
1-7	New Technologies for Surveying and Mapping	11
	1-7.1 Electronic Total Station Instruments	12
	1-7.2 Global Positioning System (GPS)	12
	1-7.3 Digital Photogrammetric Systems	13
1-8	Surveying Safety	13
1-9	Land and Geographic Information Systems	15
1-10	Federal Surveying and Mapping Agencies	16
1-11	The Surveying Profession	17
1-12	Professional Surveying Organizations	17
1-13	Surveying on the Internet	18
1-14	Future Challenges in Surveying	19
	Problems	21
	Bibliography	21

2 • UNITS, SIGNIFICANT FIGURES, AND FIELD NOTES 23

PART I UNITS AND SIGNIFICANT FIGURES 23

- 2-1 Introduction 23
- 2-2 Units of Measurement 23
- 2-3 International System of Units (SI) 25
- 2-4 Significant Figures 27
- 2-5 Rounding Off Numbers 29

PART II FIELD NOTES 30

- 2-6 Field Notes 30
- 2-7 General Requirements of Handwritten Field Notes 31
- 2-8 Types of Field Books 32
- 2-9 Kinds of Notes 33
- 2-10 Arrangements of Notes 33
- 2-11 Suggestions for Recording Notes 34
- 2-12 Introduction to Automatic Data Collectors 36
- 2-13 Transfer of Files from Data Collectors 36
- 2-14 Digital Data File Management 40
- 2-15 Advantages and Disadvantages of Automatic
Data Collectors 42
- Problems 43
- Bibliography 44

3 • THEORY OF ERRORS IN OBSERVATIONS 46

- 3-1 Introduction 46
- 3-2 Direct and Indirect Observations 46
- 3-3 Errors in Measurements 47
- 3-4 Mistakes 47
- 3-5 Sources of Errors in Making Observations 48
- 3-6 Types of Errors 48
- 3-7 Precision and Accuracy 49
- 3-8 Eliminating Mistakes and Systematic Errors 50
- 3-9 Probability 50
- 3-10 Most Probable Value 51
- 3-11 Residuals 52
- 3-12 Occurrence of Random Errors 52
- 3-13 General Laws of Probability 56
- 3-14 Measures of Precision 57
- 3-15 Interpretation of Standard Deviation 59
- 3-16 The 50, 90, and 95 Percent Errors 59
- 3-17 Error Propagation 61
- 3-17.1 Error of a Sum 62

3-17.2	Error of a Series	62
3-17.3	Error in a Product	64
3-17.4	Error of the Mean	65
3-18	Applications	66
3-19	Conditional Adjustment of Observations	66
3-20	Weights of Observations	67
3-21	Least-Squares Adjustment	68
	Problems	69
	Bibliography	71

4 • LEVELING—THEORY, METHODS, AND EQUIPMENT 72

PART I LEVELING—THEORY AND METHODS 72

4-1	Introduction	72
4-2	Definitions	72
4-3	North American Vertical Datum	74
4-4	Curvature and Refraction	75
4-5	Methods for Determining Differences in Elevation	77
4-5.1	Measuring Vertical Distances by Taping or Electronic Methods	77
4-5.2	Differential Leveling	77
4-5.3	Barometric Leveling	79
4-5.4	Trigonometric Leveling	80

PART II EQUIPMENT FOR DIFFERENTIAL LEVELING 84

4-6	Categories of Levels	84
4-7	Telescopes	85
4-8	Level Vials	87
4-9	Tilting Levels	88
4-10	Automatic Levels	89
4-11	Digital Levels	91
4-12	Tripods	93
4-13	Hand Level	93
4-14	Level Rods	93
4-15	Testing and Adjusting Levels	96
4-15.1	Requirements for Testing and Adjusting Instruments	96
4-15.2	Adjusting for Parallax	96
4-15.3	Testing and Adjusting Level Vials	97
4-15.4	Preliminary Adjustment of the Horizontal Cross Hair	97
4-15.5	Testing and Adjusting the Line of Sight	97
	Problems	99
	Bibliography	101

**5 • LEVELING—FIELD PROCEDURES
AND COMPUTATIONS****102**

- 5-1 Introduction 102
- 5-2 Carrying and Setting up a Level 102
- 5-3 Duties of a Rodperson 104
- 5-4 Differential Leveling 105
- 5-5 Precision 109
- 5-6 Adjustments of Simple Level Circuits 111
- 5-7 Reciprocal Leveling 112
- 5-8 Three-Wire Leveling 112
- 5-9 Profile Leveling 114
 - 5-9.1 Staking and Stationing the Reference Line 114
 - 5-9.2 Field Procedures for Profile Leveling 115
 - 5-9.3 Drawing and Using the Profile 117
- 5-10 Grid, Cross-Section, or Borrow-Pit Leveling 118
- 5-11 Use of the Hand Level 119
- 5-12 Sources of Error in Leveling 119
 - 5-12.1 Instrumental Errors 119
 - 5-12.2 Natural Errors 120
 - 5-12.3 Personal Errors 121
- 5-13 Mistakes 121
- 5-14 Reducing Errors and Eliminating Mistakes 122
- Problems 122
- Bibliography 125

6 • DISTANCE MEASUREMENT**126****PART I METHODS FOR MEASURING DISTANCES 126**

- 6-1 Introduction 126
- 6-2 Summary of Methods for Making Linear Measurements 126
- 6-3 Pacing 127
- 6-4 Odometer Readings 127
- 6-5 Optical Rangefinders 128
- 6-6 Tacheometry 128
- 6-7 Subtense Bar 128

PART II DISTANCE MEASUREMENTS BY TAPING 128

- 6-8 Introduction to Taping 128
- 6-9 Taping Equipment and Accessories 129
- 6-10 Care of Taping Equipment 130
- 6-11 Taping on Level Ground 130
 - 6-11.1 Lining In 130

6-11.2	Applying Tension	131
6-11.3	Plumbing	131
6-11.4	Marking Tape Lengths	131
6-11.5	Reading the Tape	131
6-11.6	Recording the Distance	133
6-12	Horizontal Measurements on Sloping Ground	133
6-13	Slope Measurements	134
6-14	Sources of Error in Taping	135
6-14.1	Incorrect Length of Tape	136
6-14.2	Temperature Other Than Standard	136
6-14.3	Inconsistent Pull	137
6-14.4	Sag	138
6-14.5	Tape Not Horizontal and Tape Off Line	139
6-14.6	Improper Plumbing	139
6-14.7	Faulty Marking	139
6-14.8	Incorrect Reading or Interpolation	140
6-14.9	Summary of Effects of Taping Errors	140
6-15	Tape Problems	140
6-16	Combined Corrections in a Taping Problem	141

PART III ELECTRONIC DISTANCE MEASUREMENT 143

6-17	Introduction	143
6-18	Propagation of Electromagnetic Energy	144
6-19	Principles of Electronic Distance Measurement	147
6-20	Electro-Optical Instruments	149
6-21	Total Station Instruments	152
6-22	EDM Instruments Without Reflectors	152
6-23	Computing Horizontal Lengths from Slope Distances	153
6-23.1	Reduction of Short Lines by Elevation Differences	154
6-23.2	Reduction of Short Lines by Zenith or Vertical Angle	155
6-24	Errors in Electronic Distance Measurement	155
6-24.1	Personal Errors	156
6-24.2	Instrumental Errors	157
6-24.3	Natural Errors	159
	Problems	160
	Bibliography	163

7 • ANGLES, AZIMUTHS, AND BEARINGS 165

7-1	Introduction	165
7-2	Units of Angle Measurement	165
7-3	Kinds of Horizontal Angles	166

7-4	Direction of a Line	167
7-5	Azimuths	168
7-6	Bearings	169
7-7	Comparison of Azimuths and Bearings	170
7-8	Computing Azimuths	171
7-9	Computing Bearings	173
7-10	The Compass and the Earth's Magnetic Field	175
7-11	Magnetic Declination	176
7-12	Variations in Magnetic Declination	178
7-13	Software for Determining Magnetic Declination	178
7-14	Local Attraction	179
7-15	Typical Magnetic Declination Problems	179
7-16	Mistakes	181
	Problems	182
	Bibliography	184

8 • TOTAL STATION INSTRUMENTS; ANGLE MEASUREMENTS **185**

PART I TOTAL STATION INSTRUMENTS 185

8-1	Introduction	185
8-2	Characteristics of Total Station Instruments	185
8-3	Functions Performed by Total Station Instruments	188
8-4	Parts of a Total Station Instrument	188
8-5	Handling and Setting up a Total Station Instrument	192
8-6	Servo-Driven and Remotely Operated Total Station Instruments	195

PART II ANGLE MEASUREMENTS 196

8-7	Relationship of Angles and Distances	196
8-8	Measuring Horizontal Angles with Total Station Instruments	197
8-9	Measuring Horizontal Angles by the Direction Method	200
8-10	Closing the Horizon	201
8-11	Measuring Deflection Angles	202
8-12	Measuring Azimuths	204
8-13	Measuring Vertical (or Zenith) Angles	205
8-14	Sights and Marks	207
8-15	Prolonging a Straight Line	208
8-16	Balancing-In	210
8-17	Random Traverse	210
8-18	Total Stations for Determining Elevation Differences	211

8-19	Adjustment of Total Station Instruments and Their Accessories	212
	8-19.1 Adjustment of Plate-Level Vials	214
	8-19.2 Adjustment of Tripods	215
	8-19.3 Adjustment of Tribrachs	215
	8-19.4 Adjustment of Optical Plummetts	215
	8-19.5 Adjustment of Circular Level Bubbles	216
8-20	Sources of Error in Total Station Work	216
	8-20.1 Instrumental Errors	216
	8-20.2 Natural Errors	220
	8-20.3 Personal Errors	220
8-21	Propagation of Random Errors in Angle Measurement	221
8-22	Mistakes	222
	Problems	223
	Bibliography	224

9 • TRAVERSING

226

9-1	Introduction	226
9-2	Methods of Measuring Traverse Angles or Directions	227
	9-2.1 Traversing by Interior Angles	227
	9-2.2 Traversing by Angles to the Right	228
	9-2.3 Traversing by Deflection Angles	228
	9-2.4 Traversing by Azimuths	229
9-3	Measurement of Traverse Lengths	229
9-4	Selection of Traverse Stations	230
9-5	Referencing Traverse Stations	230
9-6	Traverse Field Notes	231
9-7	Angle Misclosure	233
9-8	Traversing with Total Station Instruments	234
9-9	Radial Traversing	235
9-10	Sources of Error in Traversing	236
9-11	Mistakes in Traversing	236
	Problems	237
	Bibliography	238

10 • TRAVERSE COMPUTATIONS

239

10-1	Introduction	239
10-2	Balancing Angles	240
10-3	Computation of Preliminary Azimuths or Bearings	242

10-4	Departures and Latitudes	243
10-5	Departure and Latitude Closure Conditions	244
10-6	Traverse Linear Misclosure and Relative Precision	245
10-7	Traverse Adjustment	246
	10-7.1 Compass (Bowditch) Rule	247
	10-7.2 Least-Squares Method	249
10-8	Rectangular Coordinates	249
10-9	Alternative Methods for Making Traverse Computations	250
	10-9.1 Balancing Angles by Adjusting Azimuths or Bearings	250
	10-9.2 Balancing Departures and Latitudes by Adjusting Coordinates	252
10-10	Lengths and Directions of Lines from Departures and Latitudes, or Coordinates	254
10-11	Computing Final Adjusted Traverse Lengths and Directions	255
10-12	Coordinate Computations in Boundary Surveys	257
10-13	Use of Open Traverses	259
10-14	State Plane Coordinate Systems	261
10-15	Traverse Computations Using Computers	262
10-16	Locating Blunders in Traverse Measurements	264
10-17	Mistakes in Traverse Computations	265
	Problems	265
	Bibliography	269

11 • COORDINATE GEOMETRY IN SURVEYING CALCULATIONS **270**

11-1	Introduction	270
11-2	Coordinate Forms of Equations for Lines and Circles	271
11-3	Perpendicular Distance from a Point to a Line	273
11-4	Intersection of Two Lines, Both Having Known Directions	275
11-5	Intersection of a Line with a Circle	277
11-6	Intersection of Two Circles	280
11-7	Three-Point Resection	282
11-8	Two-Dimensional Conformal Coordinate Transformation	285
11-9	Inaccessible Point Problem	291
11-10	Three-Dimensional Two-Point Resection	292
11-11	Conclusions	295
	Problems	296
	Bibliography	300

12 • AREA**301**

-
- 12-1 Introduction 301
 - 12-2 Methods of Measuring Area 301
 - 12-3 Area by Division into Simple Figures 302
 - 12-4 Area by Offsets from Straight Lines 303
 - 12-4.1 Regularly Spaced Offsets 303
 - 12-4.2 Irregularly Spaced Offsets 304
 - 12-5 Area by Coordinates 305
 - 12-6 Area by Double Meridian Distance Method 309
 - 12-7 Area of Parcels with Circular Boundaries 312
 - 12-8 Partitioning of Lands 313
 - 12-8.1 Trial and Error Method 313
 - 12-8.2 Use of Simple Geometric Figures 315
 - 12-8.3 Coordinate Method 316
 - 12-9 Area by Measurements from Maps 317
 - 12-9.1 Area by Counting Coordinate Squares 318
 - 12-9.2 Area by Scaled Lengths 318
 - 12-9.3 Area by Digitizing Coordinates 318
 - 12-9.4 Area by Planimeter 318
 - 12-10 Sources of Error in Determining Areas 320
 - 12-11 Mistakes in Determining Areas 320
 - Problems 321
 - Bibliography 322

**13 • THE GLOBAL POSITIONING SYSTEM—
INTRODUCTION AND PRINCIPLES
OF OPERATION**
323

-
- 13-1 Introduction 323
 - 13-2 Overview of GPS 324
 - 13-3 The GPS Signal 326
 - 13-4 Reference Coordinate Systems for GPS 328
 - 13-4.1 The Satellite Reference Coordinate System 329
 - 13-4.2 The Geocentric Coordinate System 329
 - 13-4.3 The Geodetic Coordinate System 331
 - 13-5 Fundamentals of GPS Positioning 337
 - 13-5.1 Code Ranging 337
 - 13-5.2 Carrier Phase-Shift Measurements 339
 - 13-6 Errors in GPS Observations 339
 - 13-6.1 Clock Bias 340
 - 13-6.2 Refraction 340
 - 13-6.3 Other Error Sources 342
 - 13-6.4 Geometry of Observed Satellites 344
 - 13-6.5 Selective Availability 344

13-7	Differential GPS	346
13-8	Real-Time Kinematic GPS Methods	349
13-9	Relative Positioning	349
	13-9.1 Single Differencing	350
	13-9.2 Double Differencing	351
	13-9.3 Triple Differencing	352
13-10	The GLONASS Constellation	353
13-11	The Future	354
	Problems	355
	Bibliography	356

14 • THE GLOBAL POSITIONING SYSTEM: FIELD AND OFFICE PROCEDURES **358**

14-1	Introduction	358
14-2	Field Procedures in GPS Surveys	360
	14-2.1 Static Relative Positioning	360
	14-2.2 Rapid Static Relative Positioning	361
	14-2.3 Pseudokinematic Surveys	362
	14-2.4 Kinematic Relative Positioning	362
	14-2.5 Real-Time Kinematic GPS Surveys	364
14-3	Planning GPS Surveys	366
	14-3.1 Preliminary Considerations	367
	14-3.2 Selecting the Appropriate Survey Method	370
	14-3.3 Field Reconnaissance	372
	14-3.4 Developing an Observation Scheme	372
	14-3.5 Availability of Reference Stations	377
14-4	Performing GPS Surveys	379
14-5	Data Processing and Analysis	381
	14-5.1 Specifications for GPS Surveys	382
	14-5.2 Analysis of Fixed Baseline Measurements	383
	14-5.3 Analysis of Repeat Baseline Measurements	385
	14-5.4 Analysis of Loop Closures	386
	14-5.5 Baseline Network Adjustment	387
	14-5.6 The Survey Report	388
14-6	Sources of Errors in GPS Work	388
	14-6.1 Instrumental Errors	389
	14-6.2 Natural Errors	389
	14-6.3 Personal Errors	390
14-7	Mistakes in GPS Work	390
14-8	Future Outlook for GPS	391
	Problems	391
	Bibliography	393

15 • ADJUSTMENTS BY LEAST SQUARES 395

- 15-1 Introduction 395
- 15-2 Fundamental Condition of Least-Squares 397
- 15-3 Least-Squares Adjustment by the Observation Equation Method 398
- 15-4 Matrix Methods in Least-Squares Adjustment 403
- 15-5 Matrix Equations for Precisions of Adjusted Quantities 405
- 15-6 Least-Squares Adjustment of Leveling Circuits 407
- 15-7 Propagation of Errors 410
- 15-8 Least-Squares Adjustment of GPS Baseline Vectors 412
- 15-9 Least-Squares Adjustment of Traditional Horizontal Surveys 416
 - 15-9.1 Linearizing Nonlinear Equations 418
 - 15-9.2 The Distance Observation Equation 420
 - 15-9.3 The Azimuth Observation Equation 422
 - 15-9.4 The Angle Observation Equation 423
 - 15-9.5 A Traverse Example Using WOLFPACK 425
- 15-10 Error Ellipses 427
- 15-11 Adjustment Procedures 431
- 15-12 Other Measures of Precision for Horizontal Stations 433
- 15-13 Conclusions 434
- Problems 435
- Bibliography 440

16 • MAPPING SURVEYS 442

- 16-1 Introduction 442
- 16-2 Basic Methods for Performing Mapping Surveys 443
- 16-3 Map Scale 443
- 16-4 Control for Mapping Surveys 445
- 16-5 Contours 446
- 16-6 Characteristics of Contours 449
- 16-7 Direct and Indirect Methods of Locating Contours 449
 - 16-7.1 Direct Method 450
 - 16-7.2 Indirect Method 451
- 16-8 Digital Elevation Models and Automated Contouring Systems 451
- 16-9 Basic Field Methods for Locating Topographic Details 454
 - 16-9.1 Radiation by Total Station 454

16-9.2	Radiation by Stadia	456
16-9.3	Coordinate Squares or "Grid" Method	461
16-9.4	Offsets from a Reference Line	462
16-9.5	Topographic Detailing with Portable GPS Units	463
16-10	Selection of Field Method	465
16-11	Working with Data Collectors and Field-to-Finish Software	465
16-12	Hydrographic Surveys	468
16-12.1	Equipment for Making Soundings	468
16-12.2	Locating Soundings	470
16-12.3	Hydrographic Mapping	472
16-13	Sources of Error in Mapping Surveys	472
16-14	Mistakes in Mapping Surveys	473
	Problems	473
	Bibliography	475

17 • MAPPING

477

17-1	Introduction	477
17-2	Availability of Maps and Related Information	478
17-3	National Mapping Program	479
17-4	Accuracy Standards for Mapping	479
17-5	Manual and Computer-Aided Drafting Procedures	481
17-6	Map Design	482
17-7	Map Layout	484
17-8	Basic Map Plotting Procedures	486
17-8.1	Manually Plotting by Coordinates	486
17-8.2	Plotting Using CADD	486
17-9	Contour Interval	487
17-10	Plotting Contours	488
17-11	Lettering	489
17-12	Cartographic Map Elements	490
17-13	Drafting Materials	493
17-14	Automated Mapping and Computer-Aided Drafting Systems	493
17-15	Impacts of Modern Land and Geographic Information Systems on Mapping	499
17-16	Sources of Error in Mapping	500
17-17	Mistakes in Mapping	500
	Problems	501
	Bibliography	502

18 • ASTRONOMICAL OBSERVATIONS 504

-
- 18-1 Introduction 504
 - 18-2 Simple Methods of Determining the Meridian 506
 - 18-2.1 Shadow Method 506
 - 18-2.2 Equal Altitudes of the Sun 507
 - 18-3 Overview of Usual Procedures for Astronomical Azimuth Determination 508
 - 18-4 Ephemerides 509
 - 18-5 Definitions 512
 - 18-6 Refraction and Parallax 515
 - 18-7 Time 516
 - 18-8 Timing Observations 517
 - 18-9 Star Positions 519
 - 18-10 Azimuth from Polaris Observations 520
 - 18-11 Computations for Azimuth from Polaris Observations by the Hour Angle Method 521
 - 18-12 Verification of Field Observations 525
 - 18-13 Locating Polaris in the Telescope 526
 - 18-14 Practical Suggestions for Polaris Observations 529
 - 18-15 Azimuth from Sun Observations 530
 - 18-16 Sources of Error in Astronomical Observations 534
 - 18-17 Mistakes 535
 - Problems 535
 - Bibliography 538

19 • CONTROL SURVEYS AND GEODETIC REDUCTIONS 539

-
- 19-1 Introduction 539
 - 19-2 The Ellipsoid and Geoid 540
 - 19-3 The Conventional International Origin 542
 - 19-4 Geodetic Position, and Ellipsoidal Radii of Curvature 544
 - 19-5 Geoid Undulation and Deviation of the Vertical 546
 - 19-6 U.S. Reference Datums 548
 - 19-6.1 North American Horizontal Datum of 1927 (NAD27) 548
 - 19-6.2 North American Horizontal Datum of 1983 (NAD83) 549
 - 19-6.3 Later Versions of NAD83 549
 - 19-6.4 National Geodetic Vertical Datum of 1929 (NGVD29) 551

	19-6.5	North American Vertical Datum of 1988 (NAVD88)	551
19-7		Accuracy Standards and Specifications for Control Surveys	552
	19-8	The National Spatial Reference System	555
19-9		Hierarchy of the National Horizontal Control Network	556
19-10		Hierarchy of the National Vertical Control Network	556
19-11		Control Point Descriptions	557
19-12		Field Procedures for Traditional Horizontal Control Surveys	558
	19-12.1	Triangulation	560
	19-12.2	Precise Traverse	561
	19-12.3	Trilateration	564
	19-12.4	Combined Networks	564
19-13		Field Procedures for Vertical Control Surveys	564
19-14		Reduction of Field Observations to Their Geodetic Values	569
	19-14.1	Reduction of Distance Observations Using Elevations	570
	19-14.2	Reduction of Distance Observations Using Vertical Angles	572
	19-14.3	Reduction of Directions and Angles	576
	19-14.4	Leveling and Orthometric Heights	578
19-15		Geodetic Position Computations	582
	19-15.1	Direct Formulation	582
	19-15.2	Inverse Formulation	583
19-16		The Local Geodetic Coordinate System	584
19-17		Three-Dimensional Coordinate Computations	586
19-18		Conclusions	589
		Problems	589
		Bibliography	591

20 • STATE PLANE COORDINATES

593

20-1	Introduction	593	
20-2	Projections Used in State Plane Coordinate Systems	594	
20-3	Lambert Conformal Conic Projection	597	
20-4	Transverse Mercator Projection	598	
20-5	State Plane Coordinates in NAD27 and NAD83	599	
20-6	Computing SPCS83 Coordinates in the Lambert Conformal Conic System	600	
	20-6.1	The Direct Problem	600
	20-6.2	The Inverse Problem	602

20-7	Computing SPCS83 Coordinates in the Transverse Mercator System	604
20-7.1	The Direct Problem	605
20-7.2	The Inverse Problem	606
20-8	Reduction of Distances and Angles to State Plane Coordinate Grids	609
20-8.1	Grid Reduction of Distances	610
20-8.2	Grid Reduction of Azimuths and Angles	613
20-9	Computing State Plane Coordinates of Traverse Stations	618
20-10	Surveys Extending from One Zone to Another	621
20-11	Conversions Between SPCS27 and SPCS83	621
20-12	The Universal Transverse Mercator Projection	622
20-13	Other Map Projections	623
	Problems	623
	Bibliography	627

21 • BOUNDARY SURVEYS

628

21-1	Introduction	628
21-2	Categories of Land Surveys	629
21-3	Historical Perspectives	630
21-4	Property Description by Metes and Bounds	631
21-5	Property Description by Block and Lot System	634
21-6	Property Description by Coordinates	636
21-7	Retracement Surveys	637
21-8	Subdivision Surveys	637
21-9	Partitioning Land	641
21-10	Registration of Title	642
21-11	Adverse Possession and Easements	643
21-12	Condominium Surveys	644
21-13	Geographic and Land Information Systems	650
21-14	Sources of Error in Boundary Surveys	651
21-15	Mistakes	651
	Problems	651
	Bibliography	653

22 • SURVEYS OF THE PUBLIC LANDS

655

22-1	Introduction	655
22-2	Instructions for Surveys of the Public Lands	656
22-3	Initial Point	660
22-4	Principal Meridian	660
22-5	Baseline	661

22-6	Standard Parallels (Correction Lines)	662
22-7	Guide Meridians	662
22-8	Township Extérieurs, Meridional (Range) Lines, and Latitudinal (Township) Lines	663
22-9	Designation of Townships	664
22-10	Subdivision of a Quadrangle into Townships	665
22-11	Subdivision of a Township into Sections	666
22-12	Subdivision of Sections	667
22-13	Fractional Sections	668
22-14	Notes	669
22-15	Outline of Subdivision Steps	669
22-16	Marking Corners	669
22-17	Witness Corners	669
22-18	Meander Corners	670
22-19	Lost and Obliterated Corners	671
22-20	Accuracy of Public Lands Surveys	674
22-21	Descriptions by Township Section, and Smaller Subdivision	675
22-22	BLM Land Information System	675
22-23	Sources of Error	676
22-24	Mistakes	677
	Problems	677
	Bibliography	679

23 • CONSTRUCTION SURVEYS

680

23-1	Introduction	680
23-2	Specialized Equipment for Construction Surveys	681
23-2.1	Visible Laser Beam Instruments	681
23-2.2	Pulsed Laser EDMs	683
23-3	Horizontal and Vertical Control	684
23-4	Staking out a Pipeline	685
23-5	Staking Pipeline Grades	687
23-6	Staking out a Building	688
23-7	Staking out Highways	692
23-8	Other Construction Surveys	697
23-9	Construction Surveys Using Total Station Instruments	698
23-10	Construction Surveys Using GPS Equipment	701
23-11	Sources of Error in Construction Surveys	702
23-12	Mistakes	702
	Problems	702
	Bibliography	704

24 • HORIZONTAL CURVES**705**

- 24-1 Introduction 705
- 24-2 Degree of Circular Curve 706
- 24-3 Definitions and Derivation
of Circular Curve Formulas 708
- 24-4 Circular Curve Stationing 710
- 24-5 General Procedure of Circular Curve
Layout by Deflection Angles 712
- 24-6 Computing Deflection Angles and Chords 713
- 24-7 Notes for Circular Curve Layout by Deflection
Angles and Incremental Chords 715
- 24-8 Detailed Procedures for Circular Curve Layout
by Deflection Angles and Incremental Chords 716
- 24-9 Setups on Curve 718
- 24-10 Metric Circular Curves by Deflection Angles
and Incremental Chords 718
- 24-11 Circular Curve Layout by Deflection Angles
and Total Chords 720
- 24-12 Computation of Coordinates on a Circular Curve 721
- 24-13 Circular Curve Layout by Coordinates 723
- 24-14 Circular Curve Layout by Offsets 729
- 24-15 Special Circular Curve Problems 732
 - 24-15.1 Passing a Circular Curve Through
a Fixed Point 732
 - 24-15.2 Intersection of a Circular Curve
and a Straight Line 733
 - 24-15.3 Intersection of Two Circular Curves 733
- 24-16 Compound and Reverse Curves 733
- 24-17 Sight Distance on Horizontal Curves 733
- 24-18 Spirals 734
 - 24-18.1 Spiral Geometry 735
 - 24-18.2 Spiral Calculation and Layout 736
- 24-19 Computation of "As-built" Circular Alignments 739
- 24-20 Sources of Error in Laying out Circular Curves 743
- 24-21 Mistakes 743
- Problems 744
- Bibliography 746

25 • VERTICAL CURVES**747**

- 25-1 Introduction 747
- 25-2 General Equation of a Vertical Parabolic Curve 748
- 25-3 Equation of an Equal Tangent
Vertical Parabolic Curve 748

25-4	Vertical Curve Computations Using the Tangent Offset Equation	751
25.4.1	Example Computations Using the English System of Units	751
25.4.2	Example Computations Using the Metric System	753
25-5	Equal Tangent Property of a Parabola	754
25-6	Curve Computations by Proportion	755
25-7	Staking a Vertical Parabolic Curve	756
25-8	Computations for an Unequal Tangent Vertical Curve	756
25-9	High or Low Point on a Vertical Curve	759
25-10	Designing a Curve to Pass Through a Fixed Point	760
25-11	Sight Distance	761
25-12	Sources of Error in Laying out Vertical Curves	763
25-13	Mistakes	763
	Problems	763
	Bibliography	765

26 • VOLUMES

766

26-1	Introduction	766
26-2	Methods of Volume Measurement	766
26-3	The Cross-Section Method	767
26-4	Types of Cross Sections	768
26-5	Average End Area Formula	770
26-6	Determining End Areas	771
26-6.1	End Areas by Simple Figures	771
26-6.2	End Areas by Coordinates	772
26-7	Computing Slope Intercepts	773
26-8	Prismoidal Formula	774
26-9	Volume Computations	776
26-10	Unit-area, or Borrow-pit, Method	777
26-11	Contour-area Method	779
26-12	Measuring Volumes of Water Discharge	780
26-13	Sources of Error in Determining Volumes	781
26-14	Mistakes	781
	Problems	782
	Bibliography	785

27 • PHOTOGRAMMETRY

786

27-1	Introduction	786
27-2	Uses of Photogrammetry	787
27-3	Aerial Cameras	788

27-4	Types of Aerial Photographs	790
27-5	Vertical Aerial Photographs	790
27-6	Scale of a Vertical Photograph	793
27-7	Ground Coordinates from a Single Vertical Photograph	797
27-8	Relief Displacement on a Vertical Photograph	798
27-9	Flying Height of a Vertical Photograph	801
27-10	Stereoscopic Parallax	802
27-11	Stereoscopic Viewing	805
27-12	Stereoscopic Measurement of Parallax	807
27-13	Analytical Photogrammetry	808
27-14	Stereoscopic Plotting Instruments	809
	27-14.1 Direct Optical Projection Stereoplotters	809
	27-14.2 Mechanical Projection Stereoplotters	812
	27-14.3 Analytical Stereoplotters	813
	27-14.4 Softcopy Stereoplotters	814
27-15	Orthophotos	817
27-16	Ground Control for Photogrammetry	818
27-17	Flight Planning	819
27-19	Airborne Laser Mapping Systems	821
27-20	Remote Sensing	822
27-20	Sources of Error in Photogrammetry	827
27-21	Mistakes	828
	Problems	828
	Bibliography	830

28 • INTRODUCTION TO GEOGRAPHIC INFORMATION SYSTEMS 832

28-1	Introduction	832
28-2	Land Information Systems	835
28-3	GIS Data Sources and Classifications	835
28-4	Spatial Data	836
	28-4.1 Simple Spatial Objects	836
	28-4.2 Vector and Raster Formats	837
	28-4.3 Topology	840
28-5	Nonspatial Data	841
28-6	Data Format Conversions	841
	28-6.1 Vector-to-Raster Conversion	842
	28-6.2 Raster-to-Vector Conversion	843
28-7	Creating GIS Databases	844
	28-7.1 Generating Digital Data from Field Surveys	845
	28-7.2 Digitizing from Aerial Photos with Stereoplotters	845
	28-7.3 Digitizing Existing Graphic Materials	846

	28-7.4	Scanning	848
	28-7.5	Keyboard Entry	848
	28-7.6	Existing Digital Data Sets	850
28-8		Metadata	850
28-9		GIS Analytical Functions	851
	28-9.1	Proximity Analysis	851
	28-9.2	Boundary Operations	852
	28-9.3	Spatial Joins	853
	28-9.4	Logical Operations	854
	28-9.5	Other GIS Functions	855
28-10		GIS Applications	855
		Problems	856
		Bibliography	858

**APPENDIX A • DUMPY LEVELS, TRANSITS,
AND THEODOLITES** **861**

A-1		Introduction	861
A-2		The Dumpy Level	862
A-3		Introduction to the Transit and Theodolite	863
A-4		The Transit	864
	A-4.1	Parts of a Transit	864
	A-4.2	Circle Scales and Verniers	867
	A-4.3	Properties of the Transit	869
	A-4.4	Handling, Setting up, and Using a Transit	869
A-5		The Theodolite	871
	A-5.1	Characteristics of Theodolites	871
	A-5.2	Repeating Theodolites	873
	A-5.3	Directional Theodolites	874
	A-5.4	Handling, Setting up, and Using a Theodolite	875

APPENDIX B • EXAMPLE NOTEFORMS **876**

**APPENDIX C • TARGET HEIGHT
AND LATITUDE CORRECTIONS
TO OBSERVED AZIMUTHS** **883**

C-1		Introduction	883
C-2		Target Height Reduction	883
C-3		Correction for Target Station at Different Latitude	884

INDEX **887**
