Physics of Atoms and Molecules

second edition

B.H. Bransden &
C.J. Joachain

Prentice Hall

Contents

Preface to the second edition x
Preface to the first edition xi
Acknowledgements xii

1 Electrons, photons and atoms **1**
1.1 The atomic nature of matter 1
1.2 The electron 3
1.3 Black body radiation 9
1.4 The photoelectric effect 14
1.5 X-rays and the Compton effect 18
1.6 The nuclear atom 23
1.7 Atomic spectra and the Bohr model of hydrogen 27
1.8 The Stern–Gerlach experiment – angular momentum and spin 41
1.9 de Broglie's hypothesis and the genesis of wave mechanics 48
Problems 54

2 The elements of quantum mechanics **59**
2.1 Waves and particles, wave packets and the uncertainty principle 59
2.2 The Schrödinger equation 68
2.3 Expansions, operators and observables 73
2.4 One-dimensional examples 81
2.5 Angular momentum 89
2.6 Central forces 103
2.7 Several-particle systems 108
2.8 Approximation methods 114
Problems 142

3 One-electron atoms **147**
3.1 The Schrödinger equation for one-electron atoms 147
3.2 Energy levels 152
3.3 The eigenfunctions of the bound states 155

3.4 Expectation values. The virial theorem 164
3.5 One-electron atoms in parabolic coordinates 168
3.6 Special hydrogenic systems: positronium; muonium; antihydrogen; muonic and hadronic atoms; Rydberg atoms 173
Problems 180

4 Interaction of one-electron atoms with electromagnetic radiation 183

4.1 The electromagnetic field and its interaction with charged particles 184
4.2 Transition rates 189
4.3 The dipole approximation 195
4.4 The Einstein coefficients 201
4.5 Selection rules and the spectrum of one-electron atoms 203
4.6 Line intensities and the lifetimes of excited states 212
4.7 Line shapes and widths 215
4.8 The photoelectric effect 225
4.9 The scattering of radiation by atomic systems 230
Problems 234

5 One-electron atoms: fine structure and hyperfine structure 237

5.1 Fine structure of hydrogenic atoms 237
5.2 The Lamb shift 249
5.3 Hyperfine structure and isotope shifts 254
Problems 270

6 Interaction of one-electron atoms with external electric and magnetic fields 271

6.1 The Stark effect 271
6.2 The Zeeman effect 287
Problems 304

7 Two-electron atoms 307

7.1 The Schrödinger equation for two-electron atoms. Para and ortho states 307
7.2 Spin wave functions and the role of the Pauli exclusion principle 309
7.3 Level scheme of two-electron atoms 313
7.4 The independent particle model 316

7.5 The ground state of two-electron atoms 325
7.6 Excited states of two-electron atoms 337
7.7 Doubly excited states of two-electron atoms. Auger effect (autoionisation). Resonances 344
Problems 347

8 Many-electron atoms 349

8.1 The central field approximation 349
8.2 The periodic system of the elements 361
8.3 The Thomas–Fermi model of the atom 369
8.4 The Hartree–Fock method and the self-consistent field 382
8.5 Corrections to the central field approximation. Correlation effects. *L–S* coupling and *j–j* coupling 401
8.6 Density functional theory 416
Problems 419

9 Interaction of many-electron atoms with electromagnetic radiation and with static electric and magnetic fields 423

9.1 Many-electron atoms in an electromagnetic field 423
9.2 Selection rules for electric dipole transitions. Oscillator and line strengths 429
9.3 Retardation effects. Magnetic dipole and electric quadrupole transitions 435
9.4 The spectra of the alkalis 440
9.5 Helium and the alkaline earths 446
9.6 Atoms with several optically active electrons. Multiplet structure 450
9.7 X-ray spectra 457
9.8 The Stark effect 462
9.9 The Zeeman effect. The Hanle effect and level-crossing spectroscopy 468
Problems 475

10 Molecular structure 477

10.1 General nature of molecular structure 477
10.2 The Born–Oppenheimer separation for diatomic molecules 480
10.3 Electronic structure of diatomic molecules 485
10.4 The rotation and vibration of diatomic molecules 513
10.5 The electronic spin and Hund's cases 522

10.6 The structure of polyatomic molecules 529
Problems 539

11 Molecular spectra 541

11.1 Rotational spectra of diatomic molecules 541
11.2 Vibrational–rotational spectra of diatomic molecules 543
11.3 Electronic spectra of diatomic molecules 549
11.4 Spin-dependent interactions and electric dipole transitions 558
11.5 The nuclear spin 561
11.6 The inversion spectrum of ammonia 564
Problems 568

12 Atomic collisions: basic concepts and potential scattering 571

12.1 Types of collisions, channels, thresholds and cross-sections 571
12.2 Potential scattering. General features 575
12.3 The method of partial waves 579
12.4 The integral equation of potential scattering 599
12.5 The Coulomb potential 606
12.6 Scattering of two identical particles 612
12.7 Approximation methods 619
12.8 Absorption processes and scattering by a complex potential 657
Problems 663

13 Electron–atom collisions and atomic photoionisation 669

13.1 Electron–atom collisions. General features 669
13.2 Elastic and inelastic electron–atom collisions at low energies 673
13.3 Elastic and inelastic electron–atom collisions at high energies 705
13.4 Electron impact ionisation of atoms 731
13.5 Atomic photoionisation 745
Problems 761

14 Atom–atom collisions 765

14.1 Collisions at very low energies 766
14.2 Elastic collisions at low velocities 769
14.3 Non-elastic collisions between atoms 778
14.4 The impact parameter method 782
14.5 Atom–atom collisions at high velocities 801
Problems 810

15 Masers, lasers and their interaction with atoms and molecules **813**

15.1 Masers and lasers 814
15.2 Lasers and spectroscopy 837
15.3 Atoms in intense laser fields 846
15.4 Laser cooling and trapping of neutral atoms 881
15.5 Bose–Einstein condensation 892
15.6 Atom lasers 897

16 Further developments and applications of atomic and molecular physics **901**

16.1 Magnetic resonance 901
16.2 Atom optics 914
16.3 Atoms in cavities and ions in traps 940
16.4 Atomic clocks 952
16.5 Astrophysics 967

Appendices **979**

1 Classical scattering by a central potential 981
2 The laboratory and centre of mass systems 989
3 Evaluation of integrals by using generating functions 996
4 Angular momentum – useful formulae and results 1000
5 Hydrogenic wave functions in momentum space 1009
6 The Hamiltonian for a charged particle in an electromagnetic field 1016
7 The Dirac equation and relativistic corrections to the Schrödinger equation 1018
8 Separation of the centre of mass coordinates for an N-electron atom 1029
9 The space-fixed and body-fixed frames for a diatomic molecule 1032
10 Evaluation of two-centre integrals 1035
11 The rotational wave functions of a diatomic molecule 1037
12 Dalitz integrals 1040
13 Solutions of selected problems 1044
14 Fundamental constants, atomic units and conversion factors 1072
