

NUTRITIONAL
ASPECTS OF
Osteoporosis

EDITED BY

Peter Burckhardt

Bess Dawson-Hughes

Robert P. Heaney

Contents

Contributors xix
Preface xxv

PART I Early Influences: Childhood and Adolescence

I Calcium, Vitamin D, and Bone Growth

J.-P. Bonjour, S. Zamora, and R. Rizzoli

- I. Introduction 3
- II. Calcium and Protein Intakes, and Bone Mineral Mass 4
- III. Influence of Calcium Salt Supplementation 4
- IV. Spontaneous Calcium Intake and Reaction to the Supplementation 5
- V. Potential Impact on Peak Bone Mineral Mass 6
- VI. Transient or Persistent Gain after Discontinuation of Calcium Supplementation 6
- VII. Vitamin D Supplementation in Infants and Bone Mineral Mass 7 Years Later 7
- VIII. Conclusions 7
- References 8

2 Factors Influencing the Development of Peak Bone Mass

Velimir Matkovic, Nancy Badenhop-Stevens, Eun-Jeong Ha, Stacey Lloyd Mobley, and John D. Landoll

- I. Tracking of Skeletal Development and Peak Bone Mass 11
- II. Bone Mass, Bone Size, and Heredity 14
- III. Hormonal Factors 16
- IV. Calcium and Vitamin D Status during Growth 17
- V. Physical Exercise 20
- References 21

3 Calcium and Bone Mineral Accretion in Teenage Girls: A Review

H. Lambert, M. Barker, and R. Eastell

- I. Introduction 23
- II. The Development of Peak Bone Mass 23
- III. Observational Studies 24
- IV. Prospective Studies 26
- V. Mechanism of Action of Milk on Peak Bone Mass 28
- References 30

4 The Fetal Origins of Osteoporotic Fracture

C. Cooper, K. Walker-Bone, and E. Dennison

- I. Introduction 33
- II. The Fetal Origins of Chronic Disease 34
- III. The Programming of Osteoporosis 35
- IV. Animal Models of Programming 38
- V. Summary 40
- References 41

5 Effect of Nutrient Intake on Markers of Bone Turnover in Preterm Infants

C. M. Smith, R. C. Coombs, and R. Eastell

- I. Introduction 43
- II. Aim 44
- III. Subjects and Methods 44
- IV. Results 45

V. Discussion	47
References	48

PART II Calcium

6 Effects of Calcium on Bone Loss and Fractures According to Estrogen Repletion Status

Risto Honkanen, Marja Komulainen, Heikki Kröger, Marjo Tuppurainen, Esko Alhava, and Seppo Saarikoski

I. Abstract	51
II. Introduction	52
III. Review	52
IV. Present Study	54
V. General Conclusions	61
References	61

7 Changes in Bone Mineral Density during a Mean 4-Year Follow-Up

Kirsti Uusi-Rasi, Harri Sievänen, Matti Pasanen, Pekka Oja, and Ilkka Vuori

I. Abstract	65
II. Introduction	66
III. Subjects and Methods	66
IV. Results	68
V. Discussion	70
VI. Concluding Remarks	73
References	73

8 Intestinal Calcium Absorption in Normal Men and Women

Stefano Gonnelli, Chiara Cepollaro, Andrea Montagnani, Donatella Bruni, Luigi Gennari, Maria Stella Campagna, Maria Beatrice Franci, and Carlo Gennari

I. Abstract	75
II. Introduction	76
III. Subjects and Methods	77
IV. Statistical Analysis	78
V. Results	78
VI. Discussion	82
References	84

9 Calcium Bioavailability from Foods

Denis Barclay

- I. Introduction 85
- II. Calcium from Dairy or Inorganic Sources 86
- III. Dietary Macronutrients 89
- IV. Summary 92
- References 92

10 The Importance of Past History of Calcium Supplementation on the Therapeutic Effect of Ossein-Hydroxyapatite Compound in Osteoporotic Females

R. S. Lorenc, W. Tlustochowicz, K. H. Hozzowski, J. Łukaszewicz, and P. Biason

- I. Abstract 97
- II. Introduction 98
- III. Aim of the Study 98
- IV. Methods 98
- V. Results and Discussion 100
- VI. Conclusions 102
- References 103

PART III Dairy

11 A Critical Appraisal of the Evidence Relating Calcium and Dairy Intake to Bone Health Early in Life

Bonnie Specker and Karen Wosje

- I. Abstract 107
- II. Introduction 108
- III. Bone Measurements Issues 108
- IV. Retrospective and Cross-Sectional Studies 109
- V. Clinical Trials 110
- VI. Infant Studies of Calcium Intake and Bone 115
- VII. BMD and Fracture Risk in Children 119
- VIII. Summary 119
- References 120

12 Exercise and Milk Intake Are Determinants of Bone Mass in Elite Military Cadets

J. W. Nieves, M. Zion, J. Ruffing, R. Lindsay, and F. Cosman

- I. Abstract 125
- II. Introduction 126
- III. Methods 126
- IV. Results 127
- V. Discussion 128
- References 129

13 Acute Effects of Calcium Carbonate and Milk on the Calcium–Parathyroid Axis and Bone Resorption in Healthy Women

V. Zikán, P. Roubal, T. Haas, and J. J. Štěpán

- I. Abstract 131
- II. Introduction 132
- III. Materials and Methods 132
- IV. Results 135
- V. Discussion 137
- References 139

14 Milk Basic Protein (MBP) Promotes Bone Formation and Suppresses Bone Resorption

Yukihiko Takada, Yasuhiro Toba, Seiichiro Aoe, Masayoshi Kumegawa, and Akira Itabashi

- I. Abstract 141
- II. Introduction 142
- III. MBP 142
- IV. *In Vitro* Study 143
- V. *In Vivo* Study 147
- VI. Conclusion 151
- References 151

15 The Dairy Controversy: Facts, Questions, and Polemics

Robert P. Heaney

- I. Introduction 155
- II. The Evidence Supporting the Benefits of Dairy Calcium 157

- III. The Antidairy Positions 159
- IV. A Strategy of Media Manipulation 161
- V. A Call for Awareness 163
- References 163

PART IV Vitamin D

16 Vitamin D Insufficiency: Reappraisal of Its Definition Threshold and Bone Consequences

Pierre J. Meunier

- I. Introduction 167
- II. Influence of Vitamin D Supplements on Fracture Risk 168
- III. Relationship between Serum 25(OH)D and Serum PTH 169
- IV. Conclusion 171
- References 171

17 Would Prehistoric Human 25-Hydroxyvitamin D Concentrations Be Beneficial, and How Much Vitamin D Do We Need to Ensure Desirable Nutritional Targets?

Reinhold Vieth

- I. Introduction 173
- II. An Anthropologic Perspective 174
- III. Vitamin D Deficiency Led to Differences in Skin Color 176
- IV. Nutritional Implications of Vitamin D in Human Biology 179
- V. The Desirable Target for Serum 25(OH)D Concentration 181
- VI. How Much Vitamin D Should One Consume? 181
- VII. Vitamin D Intake per Day, Circulating 25(OH)D Concentrations, and Toxic Levels 183
- VIII. How Much Vitamin D to Ensure Desirable Target Concentrations of 25(OH)D? 187
- IX. Closing Comments 188
- References 189

18 The Evolution of Vitamin D-Related Bone Disease: The Importance of an Early Stage of Increased Bone Turnover without Impaired Mineralization

A. M. Parfitt

- I. Introduction 197
- II. Subjects and Methods 198
- III. Results 199
- IV. Discussion 202
- References 205

19 Vitamin D and Calcium Reduce Falls in Elderly Women via Improvement of Secondary Hyperparathyroidism, Body Sway, and Blood Pressure

H. W. Minne, M. Pfeifer, and B. Begerow

- I. Introduction 209
- II. Methods 210
- III. Results 211
- IV. Discussion 211
- References 214

PART V Proteins

20 Protein Intake and Bone Homeostasis

R. Rizzoli, P. Ammann, S. Bourrin, T. Chevalley, and J.-P. Bonjour

- I. Introduction 219
- II. Osteoporotic Fracture 220
- III. Bone Mass 220
- IV. Undernutrition, Protein Replenishment, and Osteoporosis 223
- V. Relation with IGF-I 227
- VI. Other Mechanisms Potentially Involved 229
- VII. Conclusion 230
- References 230

21 Dietary Protein and Effects upon Bone Health in Elderly Men and Women

Marian T. Hannan

- I. Introduction 237
- II. Effects of Extremes of Dietary Protein Intake on Elders 238
- III. Survey of Studies Suggesting Possible Flaws in Earlier Work 240
- IV. The Framingham Osteoporosis Study 241
- V. Other Results That Support the Framingham Results 245
- References 247

22 Serum Albumin Is an Independent Predictor of Functional Recovery after Hip Fracture: A Retrospective Study of 275 Inpatients

Marco Di Monaco, Roberto Di Monaco, Mario Manca,
and Alberto Cavanna

- I. Abstract 251
- II. Introduction 252
- III. Subjects and Methods 252
- IV. Results 253
- V. Discussion 256
- References 257

PART VI Trace Elements, Vitamin A, Vitamin K

23 Magnesium Deficiency: A Possible Risk Factor for Osteoporosis

Robert K. Rude

- I. Introduction 263
- II. Dietary Magnesium Intake and Osteoporosis 264
- III. Magnesium Status in Osteoporosis 266
- IV. Magnesium Therapy in Osteoporosis 266
- V. Magnesium Depletion and Osteoporosis: Experimental Animal Models 267
- VI. Possible Mechanisms for Osteoporosis in Magnesium Deficiency 268
- References 268

24 Vitamin K and the Skeleton

Sarah L. Booth

- I. Overview 273
- II. Structure of Vitamin K 274
- III. Vitamin K-Dependent Proteins in Bone 275
- IV. Dietary Intakes 278
- V. Evidence 278
- VI. Conclusions 281
- References 281

25 Do Retinoids Cause Osteoporosis?

Leonard M. Milstone and Sancy A. Leachman

- I. What Data Raise Concerns about Retinoid-Induced Osteoporosis? 285
- II. Why Would a Dermatologist Become Interested in Retinoid-Induced Osteoporosis? 286
- III. Why Has the Possibility of Retinoid-Induced Osteoporosis Been Largely Ignored? 286
- IV. Measurements of Bone Densities in Patients Receiving Systemic Retinoids 287
- V. Study of Dietary Retinol, Bone Density, and Risk for Hip Fracture 289
- VI. What Remains to Be Done? 290
- References 291

26 A Lack of Association between Excessive Dietary Intake of Vitamin A and Bone Mineral Density in Seventy-Year-Old Icelandic Women

Gunnar Sigurdsson, Leifur Franzson, Holmfridur Thorgeirsdottir, and Laufey Steingrimsdottir

- I. Introduction 295
- II. Study Population 296
- III. Methods 296
- IV. Assessment of Dietary Intake 296
- V. Statistical Analysis 296
- VI. Results 297
- VII. Discussion 300
- References 302

27 Pregnancy and Lactation Have No Long-Term Effect on Bone Mineral Density in a Healthy Population: A Twin Study

J. Alexander, L. Paton, C. Margerison, M. Frame, B. Kaymakci,
and J. D. Wark

- I. Abstract 303
- II. Introduction 304
- III. Materials and Methods 305
- IV. Results 306
- V. Discussion 309
- References 311

PART VII Estrogens, Phytoestrogens, Body Weight

28 Phytoestrogens and Bone Health

Connie M. Weaver, Lisa A. Spence, and Elaine R. Lipscomb

- I. Abstract 315
- II. Introduction 315
- III. Estrogen Replacement Therapy 316
- IV. Phytoestrogens 317
- V. Effect of Phytoestrogen on Bone 319
- VI. Future Research Needs 322
- References 322

29 Flavonols and Isoflavones Prevent Bone Loss in the Ovariectomized Rat: A Model for Postmenopausal Osteoporosis

Marie-Nöelle Horcajada-Molteni and Véronique Coxam

- I. Abstract 325
- II. Introduction 326
- III. Materials and Methods 327
- IV. Results 330
- V. Discussion 335
- References 337

30 Weight Loss and the Skeleton

Sue A. Shapses

- I. Introduction 341
- II. Bone Mass and Fracture Risk 342
- III. Bone Turnover 344
- IV. Endocrine Regulation of Bone during Weight Loss 344
- V. Dietary Regulation of Bone during Weight Loss 346
- VI. Physical Activity during Weight Loss 347
- VII. Rodent Studies 348
- VIII. Conclusion 349
- References 350

PART VIII Food Composition and Acid-Base Metabolism

31 Expression of Osteoporosis as Determined by Diet-Disordered Electrolyte and Acid-Base Metabolism

R. Curtis Morris Jr., Lynda A. Frassetto, Olga Schmidlin, Alex Forman,
and Anthony Sebastian

- I. Abstract 357
- II. Dietary Electrolytes as Determining of Calciuria and the External Balance of Calcium 358
- III. Metabolic Acidosis as Determining of Hypercalciuric Nephrolithiasis, Hypocitraturia, and Metabolic Bone Disease 362
- IV. The Hypothesis: Diet-Induced, Low-Grade Metabolic Acidosis, Especially That Amplified by Impaired Renal Acidification, Determines the Expression of Osteoporosis 365
- V. Epidemiological Observations Predictable from the Hypothesis 370
- VI. Prospect 372
- References 372

32 Impact of Food Clusters on Bone

Susan A. New

- I. Introduction 379
- II. Impact of Fruit and Vegetables on Bone Health 381

- III. Impact of Other Food Groups on Bone 391
- IV. Concluding Remarks 392
- References 392

33 Food Groups Affecting Perimenopausal and Early Postmenopausal Bone Loss in Scottish Women

H. M. Macdonald, S. A. New, M. H. Golden, D. A. Grubb, and D. M. Reid

- I. Introduction 399
- II. Aberdeen Perimenopausal Osteoporosis Screening Study (APOSS) 400
- III. Food Groups 402
- IV. Conclusions 405
- References 407

Index 409
