

# DESIGN AND ANALYSIS OF LEAN PRODUCTION SYSTEMS

Ronald G. Askin  
Jeffrey B. Goldberg

Preface vii

## 1. The Industrial Enterprise 1

---

- 1.1 Measures of Competitiveness 3
- 1.2 Functional Areas of the Firm 3
- 1.3 Product Design, Manufacture, and Delivery 3
  - 1.3.1 Integrated Product, Process, Tooling, and Test Design 5
  - 1.3.2 Manufacturing 10
  - 1.3.3 Distribution 10
  - 1.3.4 Maintenance and Support 10
  - 1.3.5 Disposal 11
- 1.4 Business Processes 11
- 1.5 Accounting Systems: Acquisition and Management of Model Data 13
- 1.6 Summary 17
- 1.7 References 17
- 1.8 Problems 18

## 2. Introduction to the Production System and the Role of Inventory 19

---

- 2.1 The Production System 19
  - 2.1.1 System Objectives 19
  - 2.1.2 System Components and Hierarchy 20
  - 2.1.3 Types of Production Systems 23
    - 2.1.3.1 Physical Organization Schemes 23
    - 2.1.3.2 Key Resources 24
    - 2.1.3.3 Product Flow Control 25
    - 2.1.3.4 Order Initiation 25
    - 2.1.3.5 Production Authorization 26
    - 2.1.3.6 Product Volume and Variety 27
    - 2.1.3.7 Product Structure—Fabrication and Assembly 27
    - 2.1.3.8 Time Horizon (Static vs. Dynamic Environments) 28
- 2.2 The Role of Inventory 28
  - 2.2.1 Inventory Definitions and Decisions 28
  - 2.2.2 Types of Inventory 29
  - 2.2.3 Justification of Inventory 31
  - 2.2.4 Inventory Costs and Tradeoffs 31
    - 2.2.4.1 Ordering and Setup Costs 32
    - 2.2.4.2 Inventory Carrying Costs 33
    - 2.2.4.3 Shortage Costs 33
    - 2.2.4.4 The Trade Offs: Inventory vs. Setup and Shortages 34
- 2.3 The Role of Information 35
- 2.4 Principles of Production Systems 37
  - 2.4.1 Learning Curves: Decreasing Marginal Costs 37
  - 2.4.2 The Product Demand Life Cycle 38

2.4.3	Production Setups Drive Operations for Low- and Medium-Volume Products	39
2.4.4	Inventory Is Needed to Support Production	40
2.4.5	Capacity Balancing	42
2.4.6	Customer-Defined Value	42
2.4.7	Large Inventories Imply Long Throughput Times	42
2.4.8	Throughput Time $\geq$ Cumulative Move and Processing Time for a Transfer Batch	43
2.5	Production System Models	43
2.5.1	Definition of a Model	43
2.5.2	Role of Models	44
2.6	A Systems Perspective	46
2.7	Summary	47
2.8	References	48
2.9	Problems	48
<b>3.</b>	<b>Market Characterization</b>	<b>50</b>
3.1	Forecasting Systems	50
3.1.1	Purpose and Use of Forecasts	51
3.1.1.1	Hierarchical Forecasting Systems	51
3.1.1.2	Model Building	52
3.1.1.3	Checking Model Adequacy	53
3.2	Time Series Extrapolation for Short-Term Forecasting	54
3.2.1	Simple Exponential Smoothing	54
3.2.2	Seasonal Forecasting Methods (Winter's)	56
3.2.2.1	Updating Equations	56
3.2.2.2	Forecasting Equation	58
3.2.2.3	Initialization	58
3.2.3	Tracking Signals and Monitoring of Forecasts	61
3.2.4	Adaptive Control	63
3.2.5	Time Series Decomposition	63
3.2.6	Box-Jenkins Time Series Models	67
3.3	Medium-Term Extrapolative and Causal Models	68
3.3.1	Linear Regression Methods	68
3.3.1.1	Parameter Estimation	69
3.3.1.2	Model Adequacy	72
3.3.1.3	Model Building	75
3.3.2	Econometric Models	78
3.4	Judgmental Forecasting	78
3.4.1	The Delphi Method	79
3.4.2	Market Surveys	79
3.5	Combining Forecasts	80
3.6	Summary	80
3.7	References	81
3.8	Problems	81
<b>4.</b>	<b>Manufacturing Strategy and the Supply Chain</b>	<b>84</b>
4.1	Manufacturing Strategy	84
4.1.1	Dimensions of Manufacturing Strategy	85
4.1.1.1	Core Competencies	85

4.1.1.2	Customer Markets and Distribution	86
4.1.1.3	Vertical Integration	86
4.1.1.4	The Level of Flexibility	87
4.1.2	Supporting Decisions	88
4.1.2.1	Make vs. Buy Decision	88
4.1.2.2	Make-to-Stock vs. Make-to-Order	89
4.1.2.3	Selection of Technologies and Equipment	91
4.1.2.4	Justification of New Systems and Technologies	93
4.2	Supply Chain Management Concepts	96
4.2.1	Global Logistics	96
4.2.2	Logistics Information Systems	99
4.2.2.1	Variance Acceleration: The Bullwhip Effect	100
4.2.3	Product Design and Customization	109
4.2.4	Vendor Selection, Certification, and Contracting	109
4.2.5	Operational Decisions in Distribution Systems	110
4.2.6	Locating Inventory	111
4.2.6.1	Basic Trade-Off: Centralization vs. Responsiveness	112
4.2.6.2	Distributing Inventory Through the Supply Chain	113
4.2.6.3	Echelon vs. Installation Accounting	117
4.3	Multifacility Location-Allocation Models: Designing the Logistics Network	121
4.4	Synthesizing the Concepts	124
4.5	Summary	124
4.6	References	125
4.7	Problems	125
4.8	Case Study: Elba Electronics	128
<b>5.</b>	<b>Aggregate Planning</b>	<b>130</b>
5.1	Planning Trade-Offs: Inventory, Workforce Changes, Overtime, Shortages	132
5.2	Basic Network Models	133
5.3	Linear Programming Models	138
5.3.1	Dynamic, Single-Stage Models	139
5.3.2	Dynamic Multistage Models	146
5.3.2.1	Multistage Production Facilities	147
5.3.2.2	Multifacility Production-Distribution Networks	149
5.4	Schedule Generation with Lot-Sizing	155
5.5	Parametric Production Planning	158
5.6	Other Approaches	159
5.7	Disaggregation	160
5.7.1	Single-Cycle Run-Out Time Model	160
5.7.2	Multiple Cycle Disaggregation	162
5.7.3	Run-Out Time with Dynamic Demand	163
5.8	Summary	163
5.9	References	164
5.10	Problems	164
5.11	Case Study: 3F Manufacturing	168
<b>6.</b>	<b>Single-Stage Inventory Control</b>	<b>169</b>
6.1	Reorder Point Inventory Models for Static, Deterministic Demand	169
6.1.1	Economic Order Quantity (EOQ) Model	169

6.1.2	Economic Manufactured Quantity Model	172
6.1.3	The Case of Fixed Setup Cost	176
6.1.4	Price Breaks	177
6.1.5	Multiproduct Coordination Models	179
6.1.5.1	Organizational Constraints	179
6.1.5.2	Rotation Cycle Policies	181
6.1.6	Lead-Time Minimization	184
6.2	Reorder Point Inventory Models for Stochastic Demand	186
6.2.1	Service Levels	186
6.2.2	Continuous Review Systems	187
6.2.3	Periodic Review Systems	194
6.2.3.1	Order-Up-to R Policies	194
6.2.3.2	Single-Period Model	196
6.2.4	Discrete and Slow Demand	200
6.2.5	Multiproduct Systems	201
6.3	Dynamic Models	201
6.3.1	Infinite Capacity, Dynamic Lot-Sizing Models	202
6.3.1.1	Continuous Review: A Simple Runout Time Model	202
6.3.1.2	Periodic Review: The Wagner-Whitin Algorithm	203
6.3.1.3	Rolling Schedules and the Silver-Meal Heuristic	208
6.3.2	Limited Capacity Models	209
6.4	Model Implementation	213
6.4.1	ABC Analysis	213
6.4.2	Exchange Curves	214
6.4.3	Extensions	215
6.5	Summary	215
6.6	References	216
6.7	Problems	216
<b>7.</b>	<b>Decentralized Pull Systems</b>	<b>221</b>
7.1	Techniques for Production Authorization	221
7.1.1	Information Requirements for Production Operations	222
7.2	Kanban Systems	225
7.2.1	The Kanban Authorization Concept	226
7.2.2	Single-Kanban System	226
7.2.3	Dual-Kanban Systems	227
7.2.4	Hybrid Single-Kanban Systems	229
7.2.5	Rules for Scheduling Kanban Production	229
7.2.6	Integration Through the Supply Chain	232
7.2.7	Specifying Parameter Values	233
7.2.7.1	Selection of Container Size	233
7.2.7.2	Selecting the Number of Kanbans	235
7.2.7.3	Selection of Production Quantity	239
7.2.8	Environmental Requirements for Kanban Systems	240
7.2.9	Average Inventory Level	243
7.2.10	Dynamic Management of WIP Levels	247
7.2.11	Defining the System Control Points	248
7.3	CONWIP: A Constant Work-in-Process Pull Alternative	250
7.3.1	Prioritizing Order Releases	252
7.3.2	Performance Evaluation of CONWIP Systems	254
7.3.3	CONWIP Variations and Extensions	260
7.4	Summary	261

7.5	References	262
7.6	Problems	263
7.7	Case Study: Safe-T Lock Company	266

## **8. Multistage Production Systems: Materials Requirements Planning for Dependent Demand 269**

8.1	Materials Requirements Planning Basics	270
8.1.1	Data and Support System Requirements	270
8.1.2	Bill of Materials and Requirements Matrix	272
8.2	Requirements Explosion and Order Release Planning	275
8.2.1	Scrap Losses	281
8.2.2	Safety Stock and Safety Lead Time	281
8.3	Capacity Planning	282
8.3.1	Rough-Cut Capacity Planning	283
8.3.2	Capacity Requirements Planning	285
8.3.3	Load Reports	287
8.3.4	Incorporating Stochastic Behavior	288
8.4	Lot-Sizing Decisions	288
8.5	Managing Change	291
8.5.1	Net Change vs. Regenerative Updates	291
8.5.2	Order Issuance	292
8.5.3	Order Pegging	295
8.5.4	Firm-Planned Orders	296
8.6	Limitations and Reality of MRP	299
8.6.1	Environmental Assumptions	299
8.6.2	Structural Limitations	300
8.7	Extensions and Integration Into the Firm	302
8.7.1	Manufacturing Resources Planning (MRP II)	302
8.7.2	Enterprise Resources Planning (ERP)	303
8.7.3	Hybrid Systems	303
8.7.4	MRP Performance Level	306
8.8	Summary	306
8.9	References	307
8.10	Problems	307

## **9. Multistage Models 310**

9.1	Multistage Product Structures	310
9.2	Types Of Inventory	312
9.3	Inventory Costs	314
9.4	Linear Models For Low Setup Time (Non-Bottleneck) Facility	315
9.5	Continuous Time Models for Stationary Data	318
9.5.1	Assembly Structures—Lot Aggregation	318
9.5.2	Assembly Structures—Lot Splitting	320
9.5.3	Reorder Cycle Policies—Power-of—Two Heuristics for Assembly Structures	322
9.5.4	General Structures	324
9.6	Discrete Time Models for Non-Stationary Data	327
9.6.1	Serial Structures	328
9.6.2	Assembly Structures	330
9.6.3.1	Optimal Solution to ASE	332
9.6.3.2	Heuristic Solution to ASE—Level by Level Lot Sizing with Cost Adjustments	333

9.6.3.3	Heuristic Solution to AKG-e—Parallel Heuristic	336
9.6.2.3.1	Schedule Construction for the $t + 1$ Period Problem	337
9.6.2.3.2	Schedule Selection for the $t + 1$ Period Problem	339
9.6.3	General Product Structures	342
9.6.3.1	Afentakis and Gavish Model	342
9.6.3.2	Integer Programming Approaches	344
9.7	Application	347
9.8	Summary	348
9.9	References	348
9.10	Problems	349

## **10. Lean Manufacturing and the Just-in-Time Philosophy 352**

---

10.1	Lean, Just-in-Time Production Systems	352
10.2	Improving the Production Environment	353
10.2.1	Eliminating Waste	353
10.2.2	Employee Cross-Training and Job Rotation	355
10.2.3	Employee Empowerment and Involvement	357
10.2.4	JIT Purchasing	358
10.2.5	Impact of Reducing Variability	358
10.2.6	Techniques for Mistake-Proofing Processes	364
10.2.7	Economics of Setup Time Reduction	366
10.2.8	Technology of Setup Time Reduction	369
10.3	Quality Engineering	373
10.3.1	Statistical Process Control	373
10.3.1.1	Determining Process Capability	374
10.3.1.2	Control Charts for Monitoring Statistical Control	376
10.3.1.2.1	X-bar and S Charts for Variables Data	377
10.3.1.2.2	Proportion Defective Charts for Attribute Data	382
10.3.2	Process Adjustments During Setup	383
10.3.3	Design of Experiments for Process Optimization	385
10.3.4	Process Improvement vs. Product Grading	386
10.3.5	Total Productive Maintenance	386
10.4	Improving Product Flow	390
10.4.1	Process Flow Charts	391
10.4.2	Forming Manufacturing Cells	392
10.4.3	Capacity Balancing	395
10.5	The Transition to Lean	400
10.5.1	Was Taylor Lean?	400
10.5.2	From Mass to Lean	400
10.5.3	Push vs. Pull Control	401
10.6	Summary	402
10.7	References	402
10.8	Problems	402
10.9	Case Study: Dream Desk Company	406

## **11. Shop Scheduling 408**

---

11.1	Scheduling System Requirements, Goals and Measures of Performance	409
11.2	Order Release Strategies	414

11.2.1	Dispatching Approaches	415
11.2.2	Mathematical Programming Approaches	417
11.3	Bottleneck Scheduling	418
11.3.1	The Theory of Constraints (TOC)	419
11.3.2	Identification of Bottlenecks	420
11.3.3	Forward and Backward Scheduling	421
11.4	Single-Machine Scheduling	422
11.4.1	Flow-Time Related Criteria	423
11.4.2	Lateness and Tardiness Related Criteria	427
11.5	Flow-Shop Scheduling	437
11.5.1	Scheduling Two Machines—Johnson's Rule	438
11.5.2	M-Machine Flow Shops	441
11.6	Job Shop Scheduling	444
11.6.1	Real-Time Dispatching Rules for Multiple Machines	444
11.6.2	Mathematical Programming Approaches	446
11.6.3	Intelligent Scheduling Systems	462
11.7	Summary	464
11.8	References	464
11.9	Problems	465
<b>12.</b>	<b>Shop Floor Control: Systems and Extensions</b>	<b>470</b>
12.1	Control System Architecture	471
12.1.1	Hierarchical Control Systems	471
12.1.2	Heterarchical Control Systems	472
12.2	Manufacturing Execution Systems	473
12.3	Design and Control of Flow Shop Systems	475
12.3.1	Assembly Line Balancing	476
12.3.1.1	Ranked Positional Weight	477
12.3.1.2	Random Processing Times and Buffers	482
12.3.1.3	Mixed-Model Releases	484
12.3.1.4	Determining Workstation Spacing	485
12.3.2	Lot-Streaming	489
12.3.3	Flexible Flow Lines	494
12.4	Re-Entrant Flow Lines	500
12.5	Tool Management Systems	502
12.6	Flexible Manufacturing Systems	503
12.6.1	Formation of Part Batches	505
12.6.2	Tool Loading	507
12.6.3	Resource Allocation	509
12.7	Summary	510
12.8	References	510
12.9	Problems	511
Appendices		515
IA	Standard Normal Distribution Function	515
IB	Unit Normal Linear Loss ( $L(u)$ )	516
II	Linear Programming	517
Index		523
