

EXERCISE PHYSIOLOGY

THIRD EDITION

Human Bioenergetics and Its Applications

George A. Brooks

Thomas D. Fahey

Timothy P. White

Kenneth M. Baldwin

Preface xix

Chapter 1

Introduction: The Limits of Human Performance 1

The Scientific Basis of Exercise Physiology:
Some Definitions 2

Physiological Science in Sports Medicine, the
Allied Health Professions, Physical Education,
and Athletics 3

The Relevance of Physiology for the Allied
Health Professions, Physical Education, and
Athletics 4

The Body as a Machine 4

The Rate-Limiting Factor 5

Maximal Oxygen Consumption ($\dot{V}_{O_{2max}}$) and
Physical Fitness 5

Factors Affecting the Performance of the Biological
Machine 7

Stress and Response 7

The Overload Principle 8

Specificity 9

Reversibility 9

Individuality 9

Development of the Field of Exercise
Physiology 9

Pioneers and Leaders in Exercise Physiology 10

The Ever-Changing Fields of Exercise Physiology
and Exercise and Sports Science in the United
States and Elsewhere 13

Physical Activity and Health: A Report of the
Surgeon General of the United States 14

Summary 15

Selected Readings 15

Chapter 2

Bioenergetics 17

Terminology 18

Heat, Temperature, and the Biological
Apparatus 18

Laws of Thermodynamics 19

Exergonic and Endergonic Reactions 20

Enthalpy 21

Free Energy 22

The Equilibrium Constant and Free Energy 23

The Actual Free Energy Change 24

ATP: The Common Chemical Intermediate 24

Structure of ATP 25

ATP: The High-Energy Chemical
Intermediate 26

Summary 27

Selected Readings 27

Chapter 3

Energetics and Human Movement 28

Immediate Energy Sources 29

Nonoxidative (Glycolytic) Energy Sources 31

Oxidative Energy Sources 31

Aerobic and Anaerobic Metabolism 32

Power and Capacity of Muscle Energy
Systems 33

Energetics and Athletic Performance 33

Enzymatic Regulation of Metabolism 33

Summary 37

Selected Readings 38

Chapter 4**Basics of Metabolism 39**

- Energy Transductions in the Biosphere 39
- Metabolism and Heat Production in Animals 40
- Early Attempts at Calorimetry 41
- Indirect Calorimetry 47
- The Utility of Indirect Calorimetry During Exercise 47
- Summary 53
- Selected Readings 53

Chapter 5**Glycogenolysis and Glycolysis in Muscle: The Cellular Degradation of Sugar and Carbohydrate to Pyruvate and Lactate 55**

- The Dietary Sources of Glucose 56
- Direct vs. Indirect Pathways of Liver Glycogen Synthesis: The "Glucose Paradox" 58
- Blood Glucose Concentration During Rest and Exercise 60
- Glycolysis 61
 - Glycolysis in Muscle 61
 - Aerobic, Anaerobic, and "Nonrobic" Glycolysis in the Cytosol 61
 - Malate-Aspartate and Glycerol-Phosphate Cytoplasmic-Mitochondrial Shuttle Systems 68
 - The Intracellular Lactate Shuttle 69
 - ATP Yield by Glycolysis 70
 - The Efficiency of Glycolysis 71
 - The Control of Glycolysis 71
- Glycogenolysis 74
 - Control by Phosphate 74
 - Control by Calcium Ion 77
- The Cell-Cell Lactate Shuttle 78
- Monocarboxylate (Lactate/Pyruvate) Transport Proteins in Muscle Cell Membranes and Mitochondria 79

The Muscle Mitochondrial Lactate/Pyruvate Transporter is MCT1 81

Gluconeogenesis 81

Glycogen Synthesis 82

Effects of Training on Glycolysis 83

Quantitative and Relative Uses of Glucose, Glycogen, and Other Substrates During Exercise 83

Effects of Exercise and Endurance Training on Blood Lactate Concentration, Appearance, and Clearance Rates 85

Summary 88

Selected Readings 88

Chapter 6**Cellular Oxidation of Pyruvate and Lactate 93**

- Mitochondrial Structure 93
- The Mitochondrial Reticulum: Mitochondria Are Interconnected Tubes, Not Individual Spheres 96
- Mitochondrial Structure and Function 97
- The Krebs Cycle 98
- The Electron Transport Chain 102
 - Function of the ETC 103
 - Control of the ETC 104
 - The Number of ATP from a Glucose Molecule 104
- Effects of Training on Skeletal Muscle Mitochondria 105
- The Training Adaptation and Coordination of Mitochondrial and Nuclear Genes 109
- What is the Mitochondrial Oxygen Partial Pressure During Exercise? 110
- Summary 112
- Selected Readings 112

Chapter 7**Lipid Metabolism 115**

Lipid Defined 116

Esterification and Hydrolysis 119

Fats in the Diet 120

Chylomicrons and Lipoproteins 120

Free Fatty Acid Levels in Blood During Rest and Exercise 121

The Utilization of Lipids During Exercise 122

Mobilization from Adipose 122

Circulation and Uptake 125

Activation and Translocation 125

 β -Oxidation 129

Mitochondrial Oxidation 129

Intramuscular Triglycerides and Lipoproteins as Fuel Sources 129

Tissue Specificity in Lipid Utilization 131

Mitochondrial Adaptation to Enhance Fat Oxidation 132

Carbohydrate–Lipid Interactions: The Glucose–Fatty Acid Cycle 132

Substrate Utilization During Exercise: The “Crossover Concept” 133

The Substrate Shunt During Exercise 137

Ketones as Fuels 138

Summary 141

Selected Readings 141

Chapter 8**Metabolism of Proteins and Amino Acids 144**

Structure of Amino Acids and Proteins 145

Proteins in the Diet 146

The Amino Acid Pool 146

Nitrogen Balance 147

The Removal of Nitrogen from Amino Acids—The Role of Glutamate 148

The Excretion of Nitrogenous Wastes 150

Sites of Amino Acid and Protein Degradation 150

The Fate of Amino Acid Carbon Skeletons 150

Gluconeogenic Amino Acids 152

Pathways of Phosphoenolpyruvate Formation 153

Amino Acids in Anaplerotic and Cataplerotic Reactions 153

Branched-Chain Amino Acids 155

The Glucose–Alanine Cycle 155

Basic Studies 155

Results of Experiments on Exercising Animals 157

Muscle Proteolysis During Exercise 157

Effects of Endurance Training on Amino Acid Metabolism 157

Results of Human Experimentation 157

Glutamate and Glutamine as Ammonia Scavengers 159

Basic Studies 159

Stimulation of Anabolic Processes Immediately After Exercise 161

Summary 162

Selected Readings 162

Chapter 9**Neural-Endocrine Control of Metabolism: Blood Glucose Homeostasis During Exercise 165**

Glucose Homeostasis: Hepatic Glucose Production and Glucose Shunting During Exercise 166

Feed-Forward Control of Glycemia During Exercise 167

Characteristics of Hormones 168

Feedback and the Control of Hormonal Secretion 169

Mechanisms of Hormonal Action 169

- Cyclic AMP (cAMP)—The “Intracellular Hormone” 169
- Insulin and Glucagon—The Immediate Control of Blood Glucose Level 169
- Facilitated Glucose Transport—The “Translocation Hypothesis” as a Mechanism of Insulin Action 170
- Facilitated Glucose Transport—The Mechanism of Muscle Contractions 172
- Role of the Liver in Stabilizing Blood Glucose Level 172
- Insulin and Hepatic Fat Metabolism 173
- The Insulin Response to Exercise 173
- Training and Insulin Release in Exercise 174
- Training and Muscle GLUT-4 174
- Glucagon—The Insulin Antagonist 174
- The Autonomic Nervous System and the Adrenal Medulla 175
- Effects of Exercise Intensity and Training on Catecholamine Responses 176
- Mild to Moderate Intensity Exercise 176
- Hard to Maximal Intensity Exercise 176
- Catecholamines and Blood Glucose Homeostasis 178
- The Endocrine Control of Hepatic Glucose Production 180
- Insulin, Glucagon, Norepinephrine, and Epinephrine: Redundant Controls of Glycemia 183
- Amylin—the Missing Ingredient? 184
- Can Muscle Make Glucose? 185
- Growth Hormone Response to Continuous and Intermittent Exercise 185
- Cortisol and the Pituitary–Adrenal Axis 186
- Role of Cortisol in Prolonged Exercise and During Recovery from Exhausting Exercise 189
- The Permissive Action of Thyroid Hormone 189
- Posterior Pituitary and ADH Secretion 191
- Summary 191
- Selected Readings 192
-
- Chapter 10**
- Metabolic Response to Exercise: Lactate Metabolism During Exercise and Recovery, Excess Post-exercise O₂ Consumption (EPOC), O₂ Deficit, O₂ Debt, and the “Anaerobic Threshold” 197**
- Why Measure the Metabolic Response to Exercise? 197
- Validity of Indirect Calorimetry in Measuring Exercise Response 198
- Muscle as a Consumer of Lactate During Exercise 200
- The Excess Post-exercise Oxygen Consumption (EPOC), or the “O₂ Debt” 202
- Classical O₂ Debt Theory: The Early Twentieth Century 202
- The Metabolic Fate of Lactic Acid After Exercise 206
- Lactate as a Carbon Reservoir During Recovery 207
- Lactic Acid Does Not Cause the O₂ Debt 207
- Exercise-Related Disturbances to Mitochondrial Function 208
- Temperature 208
- Fatty Acids and Ions 209
- Calcium Ion 209
- Sympathetic Stimulation 209
- Use of the Term “O₂ Debt” 210
- Continued Utility of the O₂ Deficit Measure 210
- Lactic Acid Turnover During Exercise (Production, Effects of Training on Blood, Removal, and Clearance) 210
- Principles of Tracer Methodology 211

Effect of Endurance Training on Lactate Metabolism During Exercise	213
The "Anaerobic Threshold": A Misnomer	215
Causes of the Lactate Inflection Point	216
Summary	218
Selected Readings	219

Chapter 11

The Why of Pulmonary Ventilation 224

Breathing, Ventilation, and Respiration 224

Rhythmicity in Ventilation 224

Pulmonary Minute Volume 225

Environmental Influences on Pulmonary Gas Volumes 225

Entry of O₂ into Blood 226

Blood Hemoglobin and Hematocrit 228

Pulmonary Diffusion 228

Solubility and Diffusion of Gases in Liquids 228

Diffusion of Gases Through Respiratory Membranes (Pulmonary Diffusing Capacity) 229

Oxygen Transport 229

Effects of CO₂ and H⁺ on O₂ Transport 230

The Red Blood Cells and Hemoglobin in CO₂ Transport 230

CO₂ Content of Blood Depends on the P_{CO₂} 233

Effects of O₂ on Hemoglobin and CO₂ Transport 234

The Buffering of Metabolic Acids by the Bicarbonate Buffer System 234

The Control of Blood pH by Ventilation (and Vice Versa) 236

The Buffering of Metabolic Acids 236

Breathing for Talking 236

Summary 237

Selected Readings 237

Chapter 12

The How of Ventilation 239

Pulmonary Anatomy 240

Mechanics of Ventilation 241

Dead Space and Alveolar Ventilation 242

Static Lung Volumes—Physical Dimensions of the Lungs 244

Physics of Ventilatory Gases 244

Partial Pressures 244

Water Vapor 246

Respiration, Circulation, and Ventilation 249

The Control of Alveolar Minute Ventilation 250

Control of Tidal Volume and Breathing Frequency 250

Control of Ventilation: An Integrated, Redundant Neural-Humoral Mechanism 253

The Respiratory (Ventilatory) Center 255

Central Inputs to the Inspiratory Center 256

Neural Input—Central Command from the Motor Cortex 256

Humoral Input—The Medullary Extracellular Fluid 257

Peripheral Inputs to the Respiratory System 257

Peripheral Chemoreceptors 257

Other Peripheral Chemoreceptors 258

Peripheral Neural Inputs to the Inspiratory Center 258

Peripheral Mechanoreceptors 258

Control of Exercise Hyperpnea 259

Summary 259

Selected Readings 260

Chapter 13

Ventilation as a Limiting Factor in Aerobic Performance at Sea Level 264

Ventilatory Perfusion Ratio (\dot{V}_E/\dot{Q}) During Rest and Exercise 264

X CONTENTS

The Ventilatory Equivalent of O ₂ During Exercise	265
$\dot{V}_{E\max}$ Versus MVV During Exercise	266
Partial Pressures of Alveolar ($P_{A_{O_2}}$) and Arterial Oxygen ($P_{a_{O_2}}$) During Exercise	266
Alveolar Surface Area for Exchange	266
Fatigue of Ventilatory Muscles and Other Limitations in Ventilation	266
Pulmonary Limitations in Highly Trained Athletes	267
Success at High Altitude	269
Summary	269
Selected Readings	270

Chapter 14

The Heart 272

The Structure of the Heart	273
<i>The Myocardium</i>	274
Structure and the Cardiac Cycle	276
The Electrical Activity of the Heart and the Electrocardiogram	277
The Electrocardiogram (ECG or EKG)	278
Training and the ECG	279
Cardiac Performance at Rest and During Exercise	279
Factors Determining Cardiac Performance	279
Preload	281
Afterload	284
Contractility	286
Heart Rate	287
Summary	288
Selected Readings	288

Chapter 15

Circulation and Its Control 290

The Circulation	291
Vascular Smooth Muscle	292

Determinants of Blood Flow	293
Poiseuille's Equation	294
Principle of the Siphon	295
Limitations of Poiseuille's Equation and the Siphon <i>In Vivo</i>	295
Cardiovascular Regulation and Control	297
Neural Control of the Heart	297
Neural Control of the Cardiovascular System	297
Hormonal Control Mechanisms	300
Metabolic Regulation of Blood Flow	302
Autoregulation	304
Summary of Cardiovascular Control During Exercise	304
Regional Circulations	305
The Kidneys and Control of Blood and Fluid Volumes	308
Vascularization and Exercise Training	311
Summary	312
Selected Readings	312

Chapter 16

Cardiovascular Dynamics During Exercise 317

Cardiovascular Responses to Exercise	318
Oxygen Consumption	320
Heart Rate	322
Stroke Volume	322
Arteriovenous Oxygen Difference	323
Blood Pressure	323
Blood Flow and "Cardiovascular Triage"	324
The Limits of Cardiovascular Performance	326
Protection of the Heart and Muscles During Exercise	328
Dynamics of Oxygen Transport Capacity	329

Criteria for Identifying $\dot{V}_{O_{2max}}$	329
Performance Efficiency	330
$\dot{V}_{O_{2max}}$ as Predictor of Endurance Performance	331
Changes in Cardiovascular Parameters with Training	331
Oxygen Consumption	332
Heart Rate	332
Stroke Volume	334
Arteriovenous Oxygen Difference	334
Blood Pressure	334
Blood Flow	334
Summary	335
Selected Readings	335

Chapter 17

Skeletal Muscle Structure and Contractile Properties 339

Skeletal Muscle Functional Anatomy	340
Organizational Hierarchy	340
Myotendinous Junction	342
Cell Dimensions	343
Sarcomeres	344
Contractile and Regulatory Proteins	345
Sliding Filament Theory and the Crossbridge Cycle	350
Capillarity and the Microvascular Unit	352
Capillarity	352
Microvascular Unit	354
Exercise Blood Flow	355
Architectural Factors	356
Contractile Properties	359
Types of Contraction	359
Experimental Models of Muscle Contraction	359
Length-Tension Relationship	360
Isometric Contraction	360

Force-Velocity Relationship During Shortening and Lengthening Contractions 362

Summary	364
Selected Readings	365

Chapter 18

Neurons, Motor Unit Recruitment, and Integrative Control of Movement 367

Excitability	368
Resting Membrane Potential	368
Action Potential	369
Neuron Anatomy	372
Facilitation and Inhibition of Action Potentials	372
The Neuromuscular Junction	374
Excitation-Contraction Coupling	376
Muscle Membranes Involved in Excitation	376
Coupling of Excitation to Contraction	376
Motor Units, Fiber Types, and Recruitment	379
The Motor Unit	379
Muscle Fiber Types	379
The Size Principle of Motor Unit Recruitment	384
Electromyography	384
Integrative Control of Movement	385
Anatomical Considerations	385
Neural Control of Reflexes	389
Muscle Spindles and the Gamma Loop	390
Golgi Tendon Organs	391
Corticospinal Tract	392
Multineuronal, Extrapyramidal Pathways	392
Spinal Movements	395
Motor Control and Learning	395
Volitional and Learned Movements	395

Sensory Input During Movement 396

Motor Learning 396

Summary 398

Selected Readings 398

Chapter 19

Principles of Skeletal Muscle

Adaptations 401

Principle of Myoplasticity 402

Muscle Fiber Types in Elite Athletes 405

Adaptations in Muscle Structure to Endurance Training 406

Adaptations in Muscle Structure to Resistance Training 407

Contribution of Cellular Hypertrophy and Hyperplasia 408

Fiber-Type Specific Adaptations 408

Alterations in Specific Force with Hypertrophy 409

Adaptations in Muscle Structure to Decreased Physical Activity 411

Muscle Adaptation: Injury and Regeneration 411

Gender Differences in Skeletal Muscle 412

Age-Associated Changes in Skeletal Muscle 414

Age-Associated Muscle Atrophy 414

Age-Associated Change in Muscle Function 416

Structure-Function Responses to Resistance Training 417

Summary 419

Selected Readings 420

Chapter 20

Muscle Strength, Power, and Flexibility 424

Progressive Resistance Training 425

Classification of Strength Exercises 426

Isometric Exercise 426

Isotonic Exercise 427

Factors Involved in Muscle Adaptation to Progressive Resistance Exercise 429

Overload 431

Specificity 432

Reversibility 435

Individual Differences 435

Components of Muscle Strength: Neural-Motor, Contractile, Elastic 435

Neural-Motor Component of Strength 436

Contractile Component of Strength 440

Muscle Elastic Component of Strength 442

Coordinating Neural-Motor, Contractile, and Elastic Components of Strength 443

Muscle Soreness 443

Progressive Resistance Training Programs of Athletes 444

Physiological Basis for Periodization of Training 449

Training for Flexibility 449

Benefits of Flexibility and Stretching Exercises 449

Additional Potential Benefits 450

Factors Determining Flexibility 451

Developing Flexibility 452

Summary 454

Selected Readings 454

Chapter 21

Conditioning for Endurance Athletic Events 458

Training for Athletic Competition 459

Overload, Stimulus, and Response 459

Specificity, Skill Acquisition, and Developing Metabolic Machinery 460

Recovery from Sprint Activities 461

Over-Distance Training 461

Interval Training 462

Training Variation and Peaking 462

Sprint Training 463

Volume vs. Intensity of Training	463
Central vs. Peripheral Adaptations	464
The Taper for Competition	465
High Altitude Training	465
Three Components of a Training Session	468
Methods of Evaluating Training Intensity	468
Heart Rate	469
Blood Lactate	469
Heart Rate Field Test for the Maximal Blood Lactate Steady State	471
Planning a Training Schedule	472
Summary	472
Selected Readings	472

Chapter 22

Exercise in the Heat and Cold 476

Humans as Homeotherms	477
Normal Body Temperature	478
Heat Transfer	479
Body Temperature, Environment, and Exercise Intensity	479
Heat Production	480
Heat Loss	481
Temperature Regulation	484
Behavior	486
Exercise in the Cold	486
Movement in the Cold	486
Cardiopulmonary Responses to the Cold	487
Muscle Strength	489
Metabolic Changes	489
Acclimatization and Habituation to Cold	490
Cold Injury	491
Exercise in the Heat	491
Cardiovascular Effects	491
Sweating Response	492
Acclimatization to Heat	493
Loss of Acclimatization to Heat	494

Thermal Distress	494
Dehydration	495
Heat Cramps	496
Heat Exhaustion	496
Heat Syncope	496
Heat Stroke	497
Preventing Thermal Distress	498

Summary	498
Selected Readings	500

Chapter 23

Exercise, Atmospheric Pressure, Air Pollution, and Travel 504

Altitude	505
Human Responses to Altitude	507
Systemic Responses to Altitude	508
Muscle Oxidative Capacity at Altitude	514
Competitive Athletics at Altitude	517
Humans in High-Pressure Environments	519
Physiological Effects of Exposure to High Pressure	519
Hyperbaric Exercise	524
Exercise and Air Pollution	528
Biological Rhythms and Travel Across Time Zones	529
Summary	530
Selected Readings	531

Chapter 24

Cardiovascular Diseases and Exercise 537

Sudden Cardiac Death (SCD) and Exercise	538
Mechanisms of Sudden Death During Exercise	540
Preventing Sudden Death During Exercise	540
The Development of Atherosclerosis	540
Risk Factors in the Development of Coronary	

- Heart Disease 544
 - Dyslipidemia 545
 - Hypertension 548
 - Smoking 548
 - Family History, Gender, and Age 549
 - Obesity 549
 - Emotional Stress 550
 - Physical Activity 550
- Cardiac Rehabilitation 555
 - The Inpatient Program 556
 - The Outpatient Therapeutic Program 557
 - The Exercise Maintenance Program 557
 - Cardiac Rehabilitation and Reinfarction 557
 - Cardiac Drugs and Exercise 557
- Hypertension 567
 - Systolic Blood Pressure 567
 - Diastolic Blood Pressure 567
 - Mechanisms of Hypertension 567
 - Treatment of Hypertension 569
 - Exercise and Hypertension 570
- Chronic Heart Failure (CHF) 572
 - Exercise Training in CHF 572
- Heart Transplantation 573
 - Exercise and the HT Patient 573
- Summary 573
- Selected Readings 574

Chapter 25
Obesity, Body Composition, and
Exercise 578

- Obesity and Health 579
 - Obesity, Insulin Resistance, and the Metabolic Syndrome 582
 - Obesity and Hypertension 582
 - Obesity and Hyperlipidemia 583
 - Obesity and Musculoskeletal Injury 583

- Energy Balance: The Role of Exercise and Diet 584
 - Control of Food Intake 584
- Energy Expenditure 585
 - Resting Metabolic Rate 585
 - Thermogenesis 586
 - Physical Activity 588
- Hypercellularity of Adipose 588
- The Treatment of Obesity 590
 - Diet: Caloric Restriction 590
 - Dehydration 591
 - Medical Procedures 591
 - Behavior Modification 592
 - Exercise 593
- Body Composition 594
 - Ideal Body Composition 594
 - Measuring Body Composition 594
 - Application of Body Composition Measurements 603
- Summary 603
- Selected Readings 604

Chapter 26
Exercise, Disease, and Disability 607

- Chronic Diseases 608
 - Cancer 608
 - Diabetes 610
- Aging-Related Disorders 614
 - Arthritis 614
 - Osteoporosis 615
- Pulmonary Disorders 617
 - Chronic Obstructive Lung Disease 617
 - Asthma 619
- Exercise, Immunity, and Infection 621
 - Basic Structure of the Immune System 621
 - Exercise Training and Immunity 622
 - Viral Infections 623

Mental and Physical Disability	625
Exercise and Mental Health	625
Exercise for People Confined to Wheelchairs	625
Deconditioning and Bed Rest	627
Summary	632
Selected Readings	633

Chapter 27

Exercise Testing and Prescription	639
Medical Screening Prior to Beginning an Exercise Program	640
Medical Examination	640
Contraindications to Exercise Training and Testing	641
Functional Capacity	641
METs	646
$\dot{V}_{O_{2max}}$ Expressed per Kilogram Body Mass (ml · kg ⁻¹ · min ⁻¹)	647
Measuring Maximal Oxygen Consumption	649
Ventilation	649
Gas Temperature and Barometric Pressure	649
Composition of Expired Air	650
Tests of Functional Capacity	652
Maximal Versus Submaximal Tests	652
Exercise Test Measurements	652
Physical Preparation for Exercise Tolerance Testing	655
The Treadmill	657
The Bicycle Ergometer	659
The Arm Ergometer	663
Bench Steps	663
Exercise-Specific Tests	665
Field Tests of Maximal Oxygen Consumption	665
Submaximal Tests	667

Tests of High-Intensity Exercise Capacity	668
Exercise Prescription for Health and Fitness	670
Exercise and Health	671
Exercise Prescription for the Cardiac Patient	676
Summary	677
Selected Readings	678

Chapter 28

Nutrition and Athletic Performance	683
Nutritional Practice in Athletics	683
Muscle Glycogen and Dietary Carbohydrate	684
The High-Carbohydrate Diet as the Norm	686
Problems with Carbohydrate Loading	686
Liver Glycogen and Blood Glucose	687
Amino Acid Participation in Exercise	687
Lean Tissue Maintenance and Accretion (Bulking Up)	689
Fat Utilization During Exercise	690
The Precompetition Meal	691
Water in the Diet	693
Fluid, Energy, and Electrolyte Ingestion During and After Exercise	694
The Normal Balanced Diet	695
Meal Planning	695
The Athlete's Diet and Trace Elements	696
Cutting Weight and Special Needs of the Female Athlete	699
Summary	700
Selected Readings	700

Chapter 29

Ergogenic Aids	703
Banned Substances	703
Anabolic-Androgenic Steroids	707
How Anabolic Steroids Work	709
Anabolic Steroids and Performance	710

Side Effects of Anabolic Steroids	711
Use of Anabolic Steroids by Athletes	714
Growth Hormone	716
IGF-1	717
Dehydroepiandrosterone (DHEA) and Androstenedione	718
Insulin	718
Clenbuterol	718
Creatine Monohydrate	719
Phosphatidylserine (PS)	719
β -hydroxy-beta-methylbutyrate (HMB)	719
Amphetamines	720
Amphetamines and Athletic Performance	720
Side Effects of Amphetamines	720
Cocaine	721
Caffeine	722
Caffeine and Performance	722
Other Stimulants	723
Nutritional Supplements	723
Carbohydrate Feeding	723
Vitamins	724
B Vitamins	724
Vitamin C	724
Vitamin E and Wheat Germ Oil	725
Aspartates	726
L-Carnitine	726
Succinates	727
Chromium	727
"Adaptogens"—Herbal Stimulants	727
Other Nutritional Ergogenic Aids	727
Sodium Bicarbonate	727
Blood Doping and Erythropoietin	728
Oxygen	728
Summary	729
Selected Readings	729

Chapter 30
**Gender Differences in Physical
Performance** 734

Physiological Sex Differences	734
Sex Chromosomes	734
Growth and Maturation	736
Body Composition	737
Oxygen Transport and Endurance	738
Physical Performance	741
Muscle Metabolism and Substrate Utilization	741
Strength	742
Exercise and the Menstrual Cycle	742
Menarche	742
Amenorrhea and Oligomenorrhea	744
Dysmenorrhea and Premenstrual Syndrome (PMS)	748
Pregnancy	748
Energy Cost of Pregnancy	748
Effects of Physical Fitness on Childbirth	750
Effect of Pregnancy on Fitness	750
The Effect of Exercise on the Fetus	752
Exercise Prescription in Pregnancy	753
Summary	755
Selected Readings	756

Chapter 31
Growth and Development 760

Nature of the Growth Process	761
Growth Curves	761
Neuroendocrine Control of Growth	761
Exercise and Growth	763
Growth in Infancy and Childhood	763
Growth at Puberty and Adolescence	764
Assessing Maturation in Adolescents	765
Skeletal Changes During Growth	768
Bone Growth	768
Epiphyseal Injury	769

Body Composition and Obesity	769	Free Energy of ATP and Other ATP-Related Fatigue Effects	803
Muscle	772	Glycogen	804
Cardiorespiratory and Metabolic Function	772	Blood Glucose	804
Cardiac Performance	772	Metabolite Accumulation	804
Pulmonary Function	773	Lactic Acid Accumulation (Lactic Acidosis)	804
Temperature Regulation	776	Phosphate and Diprotenated Phosphates	805
Training	776	Calcium Ion	805
“Anaerobic” Work Capacity	777	Mitochondrial Coupling Efficiency	806
Genetics and Physical Performance	777	Ryanodine Receptor Fatigue	806
Summary	778	O ₂ Depletion and Muscle Mitochondrial Density	807
Selected Readings	780	Disturbances to Homeostasis	807
		Central and Neuromuscular Fatigue	807
		Psychological Fatigue	811
		The Heart as a Site of Fatigue	811
		$\dot{V}_{O_{2max}}$ and Endurance	811
		Muscle Mass	812
		Muscle Mitochondria	812
		Arterial O ₂ Transport	813
		Muscle Oxygenation at $\dot{V}_{O_{2max}}$	813
		Arterial O ₂ Transport, $\dot{V}_{O_{2max}}$, and Exercise Endurance	813
		Catastrophe Theory	814
		The Future of Fatigue	814
		NMR (MRS and MRI)	814
		PET	816
		NIRS	816
		Summary	817
		Selected Readings	818
		Appendix I List of Symbols and Abbreviations	823
		Appendix II Units and Measures	827
		Index	831
<hr/>			
Chapter 32			
Aging and Exercise	783		
The Nature of the Aging Process	785		
The Aging Process and the Effects of Exercise	787		
Cardiovascular Capacity	787		
Pulmonary Function	790		
Skeletal System	791		
Joints	792		
Skeletal Muscle	792		
Strength	792		
Muscle Fiber Types and Motor Units	793		
Muscle Biochemistry	793		
Exercise and Cardiovascular Disease Risk Factors	793		
Body Composition and Stature	793		
Neural Function	795		
Exercise Prescription for the Elderly	795		
Summary	796		
Selected Readings	796		
<hr/>			
Chapter 33			
Fatigue During Muscular Exercise	800		
Identifying Fatigue	801		
Metabolite Depletion	802		
The Phosphagens (ATP and CP)	802
