

Practical

# Fiber Optics

A close-up photograph of numerous fiber optic cables fanning out across the page. The fibers are illuminated at their ends with various colors of light, including red, orange, yellow, green, and blue, against a dark background.

**David Bailey  
Edwin Wright**

## Preface

xiii

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Historical background to fiber optics	2
1.2	Comparison of fiber optic and copper cabling systems	4
1.2.1	Bandwidth	4
1.2.2	Interference	5
1.2.3	Electrical isolation	5
1.2.4	Transmission distances	5
1.2.5	Size and weight	6
1.2.6	Use in hazardous gas areas	6
1.2.7	Security	6
1.2.8	Multi-dropping for LANs	7
1.2.9	Jointing and connectors	7
1.2.10	Terminal equipment	7
1.2.11	Test equipment and testing	7
<b>2</b>	<b>Definitions and fundamental principals</b>	<b>8</b>
	Data communications	8
2.1	Transmitters, receivers and communication channels	8
2.1.1	Interface standards	9
2.1.2	Coding	9
2.2	Types of communication channels	11
2.2.1	Analog communications channels	11
2.2.2	Digital communications channels	12
2.3	Communications channel properties	12
2.3.1	Signal measurement on a communications channel	12
2.3.2	Signal attenuation	14
2.3.3	Channel bandwidth	16
2.3.4	Noise	17
2.4	Data transmission modes	18
2.4.1	Direction of signal flow	18
2.4.2	Synchronization of digital data signals	19
2.4.3	Asynchronous transmission	19
2.4.4	Synchronous transmission	21
2.5	Light	22
2.5.1	Electromagnetic waves	22
2.5.2	Photons	22
2.6	The electromagnetic spectrum	23
2.6.1	Optical region of the spectrum	24
2.7	Revisiting copper cables	24
2.7.1	Cable types	24
2.7.2	Cable structure	24
2.8	Factors affecting copper cable performance	26
2.8.1	Attenuation	26

2.8.2	Crosstalk	26
2.9	Coaxial cable	27
2.9.1	Coaxial cable components	27
2.9.2	Coaxial cable connectors	28
2.9.3	Baseband versus broadband over coaxial cable	28
2.9.4	Advantages of a coaxial cable	29
2.9.5	Disadvantages of coaxial cable	29
2.10	Twisted pair cable	29
2.10.1	Components of twisted pair cable	30
2.10.2	Shielded twisted pair (STP) cable	31
2.10.3	Unshielded twisted pair (UTP) cable	31
2.10.4	Cable categories	31
2.10.5	Performance requirements	32
2.10.6	Advantages of twisted pair cable	35
2.10.7	Disadvantages of twisted pair cable	35
2.11	Sources of interference and noise on cables	35
2.11.1	Electrostatic coupling	36
2.11.2	Magnetic coupling	37
2.11.3	Impedance coupling	39
<b>3</b>	<b>Theory of fiber optic transmission</b>	<b>42</b>
	Introduction	42
3.1	Fundamental principles of operation	42
3.1.1	Introduction	42
3.1.2	Reflection, refraction and diffraction	43
3.1.3	Refractive index	44
3.1.4	Snell's law	46
3.1.5	Internal reflection	47
3.1.6	External reflection	48
3.1.7	Construction of an optical fiber	48
3.1.8	Fresnel reflection	49
3.2	The light transmission nature of glass	50
3.3	Numerical aperture	51
3.4	Modal propagation in fibers	54
3.4.1	Introduction	54
3.4.2	Modal dispersion	55
3.4.3	Number of modes	57
3.4.4	Leaky modes	58
3.4.5	Refractive index profile	58
3.4.6	Multimode step and graded index fibers	59
3.4.7	Singlemode fibers	64
3.4.8	A comparison of data rate, distance and fiber type	66
3.4.9	Cost66	
3.5	Bandwidth	67
3.6	Wave division multiplexing	68
3.7	Effects on optical signal transmission	68
3.7.1	Chromatic dispersion	69

3.7.2	Absorption losses	71
3.7.3	Scatter losses	72
3.7.4	Bending losses	72
3.7.5	Radiation losses	73
3.7.6	Fresnel connection loss	74
3.7.7	Fiber size and NA mismatch	74
3.8	Other losses	75
3.9	Other types of fibers	75
3.9.1	Plastic fibers	75
3.9.2	Ultraviolet fibers	76
3.9.3	Mid infrared fibers	76
3.9.4	Polarized fibers	76
3.10	Fabrication of fibers	77
3.10.1	Inside chemical vapor deposition	77
3.10.2	Outside chemical vapor deposition	78
3.10.3	Vapor axial deposition	78
3.10.4	Double crucible drawing	79
<b>4</b>	<b>Fiber optic cable construction</b>	<b>81</b>
	Introduction	81
4.1	Basic cable construction objectives	81
4.1.1	Mechanical protection	81
4.1.2	Easier handling	81
4.1.3	Environmental protection	82
4.1.4	All-dielectric cables (galvanic isolation)	82
4.2	Fiber tensile ratings	82
4.3	Cable structural elements	83
4.4	Central member	84
4.5	Strength members	84
4.5.1	Metallic strength members	84
4.5.2	Non-metallic strength members	84
4.6	Fiber housing	85
4.6.1	Loose buffer construction	85
4.6.2	Loose tube construction	85
4.6.3	Slotted core construction	86
4.6.4	Tight buffered fibers	87
4.6.5	Ribbon cable construction	87
4.7	Moisture barrier	88
4.8	Cable sheaths	88
4.9	Cable armoring	89
4.10	Classes of fiber optic cables	89
4.10.1	Aerial cable	89
4.10.2	Underground cable	91
4.10.3	Subaqueous cables	92
4.10.4	Indoor cables	93

<b>5</b>	<b>Connecting fibers</b>	<b>97</b>
	Introduction	97
5.1	Optical connection issues	97
	5.1.1 Lateral misalignment of fiber cores	98
	5.1.2 Differences in core diameters	99
	5.1.3 Angular fiber misalignment	99
	5.1.4 Numerical aperture differences	101
	5.1.5 Reflection at the end of fibers	102
	5.1.6 End separation of fibers	102
	5.1.7 End finish and cleanliness of fibers	104
	5.1.8 Connection loss summary	104
5.2	Fiber end preparation	104
	5.2.1 Preparation of glass fibers	104
	5.2.2 Scribe and break method	104
	5.2.3 Cleaving tool	104
	5.2.4 Lap and polish method	105
	5.2.5 Preparation for plastic fibers	105
5.3	Splicing fibers	105
	5.3.1 Fusion splicing	105
	5.3.2 Fusion splicing process	107
	5.3.3 Mechanical splicing	107
5.4	Connectors	111
	5.4.1 Connector properties	111
	5.4.2 General connector construction	112
	5.4.3 Common connector types	114
	5.4.4 Connector handling	116
	5.4.5 Pig-tail	116
5.5	Optical couplers	117
<b>6</b>	<b>Optical drivers and detectors</b>	<b>120</b>
	Introduction	120
6.1	Optical sources	120
6.2	Light emitting diodes (LED)	120
	6.2.1 Construction	120
	6.2.2 Basic LED operating principles	121
	6.2.3 LED geometry	123
	6.2.4 Operating characteristics	123
	6.2.5 Practical LED devices	124
6.3	Laser diodes	125
	6.3.1 Basic principles of laser operation	125
	6.3.2 Operating characteristics	126
	6.3.3 Practical laser devices	127
	6.3.4 Advances In laser technology	128
6.4	Optical transmitter modules	128
6.5	Laser safety considerations	129
6.6	Optical detectors	129

6.7	Pin photodiodes	129
	6.7.1 Operating principles	129
	6.7.2 Operating characteristics	130
	6.7.3 PIN photodiode packaging	132
6.8	Avalanche photodiodes	132
	6.8.1 Operating principles	132
	6.8.2 Avalanche photodiode structure	132
	6.8.3 Operating characteristics	133
	6.8.4 Avalanche photodiode applications	134
6.9	Optical receiver modules	134
	6.9.1 Basic elements of a radical receiver	134
	6.9.2 Amplifiers	134
	6.9.3 Receiver packaging	136
6.10	Optical amplifiers	136
	6.10.1 Doped fibers	136
	6.10.2 Semiconductor laser amplifiers	137
<b>7</b>	<b>Installing fiber optic cables</b>	<b>138</b>
	Introduction	138
7.1	Initial preparation for a cable installation	138
	7.1.1 Site survey	138
	7.1.2 Designing the cabling system	139
7.2	General installation rules and procedures	142
	7.2.1 Cable bend radius	142
	7.2.2 Cable tension	144
	7.2.3 Cable reels	146
	7.2.4 Installation in cable trays	147
	7.2.5 Installation in conduits	149
	7.2.6 Leaving extra cable	152
	7.2.7 Lubricants	153
	7.2.8 Environmental conditions	154
7.3	Indoor cable installations	154
7.4	Outdoor cable installations	156
7.5	Other installation methods	158
	7.5.1 Aerial installations	158
	7.5.2 Blown fibers	159
7.6	Splicing trays/organizers and termination cabinets	160
	7.6.1 Splicing trays	160
	7.6.2 Splicing enclosures	161
	7.6.3 Termination in patch panels and distribution frames	164
<b>8</b>	<b>Fiber optic system design</b>	<b>166</b>
	Introduction	166
8.1	Initial design considerations	167
	8.1.1 Data transmission technology	167
	8.1.2 Transmission parameters	167
	8.1.3 Future data transmission capacity growth	167

8.1.4	Reliability	168
8.1.5	Selecting an operating wavelength	169
8.1.6	Cable type selection and installation route	170
8.1.7	Repeaters and amplifiers	171
8.1.8	Transmitter and receiver equipment selection	171
8.2	Design loss calculations	172
8.2.1	Definition of parameters	172
8.2.2	Methodology for loss budget calculations	175
8.2.3	Example calculation	177
8.3	Design bandwidth calculations	178
8.3.1	Time response	178
8.3.2	Overall system time response	180
8.3.3	Optical fiber time response	180
8.3.4	Transmitter and receiver time response	182
8.3.5	Example of bandwidth calculation	182
<b>9</b>	<b>Testing of fiber optic systems</b>	<b>184</b>
	Introduction	184
9.1	Fundamental concepts of optical measurement	184
9.1.1	Optical power	184
9.1.2	Power measurement	186
9.1.3	Optical and electrical bandwidth	187
9.2	Standard fiber optic tests	187
9.2.1	Component testing	187
9.2.2	Continuity testing	188
9.2.3	Insertion loss testing	189
9.2.4	Optical time domain reflectometers	190
9.2.5	The cold clamp	193
9.2.6	Bit error rate testing	193
9.2.7	Time domain measurements (eye diagrams)	195
9.3	Other fiber optic tests	197
9.3.1	Wavelength measurement	197
9.3.2	Dispersion measurement	198
9.3.3	Bandwidth measurement	198
9.3.4	Phase measurement	199
9.3.5	Polarization measurement	200
9.3.6	Miscellaneous measurements	200
<b>10</b>	<b>Technologies that use optical fibers</b>	<b>201</b>
	Introduction	201
10.1	Communications systems	202
10.1.1	Analog systems	202
10.1.2	TV modulators	202
10.1.3	Cable TV	202
10.1.4	Digital systems	203
10.1.5	Undersea cables	203
10.1.6	HDTV	203
10.2	Local area network applications	204

10.2.1	FOIRL	204
10.2.2	10BaseF	204
10.3	MAN and WAN applications	208
10.3.1	SONET and SDH	208
10.3.2	B-ISDN	210
10.3.3	Asynchronous transfer mode (ATM)	210
10.3.4	Frame relay	211
10.3.5	Fiber channel	212
10.4	Sensors	214
10.4.1	Environmental sensors	216
10.4.2	Fiber optic gyroscopes	216
10.5	Bundled fiber applications	217
<b>Appendix A</b>	Glossary	218
<b>Appendix B</b>	Practical sheets	246
