

Numerical and Analytical Methods for Scientists and Engineers Using *Mathematica**

CONTENTS

PREFACE xii				
	ORDINARY DIFFERENTIAL EQUATIONS IN THE PHYSICAL SCIENCES			
1.1 Introduction / 1				
		1.1.1	Definitions / 1	
	Exe	rcises f	or Sec. 1.1 / 5	
	1.2	Grapl	nical Solution of Initial-Value Problems / 5	
		1.2.1	Direction Fields; Existence and Uniqueness of Solutions / 5	
		1.2.2	Direction Fields for Second-Order ODEs: Phase-Space Portraits / 9	
	Exe	rcises f	for Sec. 1.2 / 14	
1.3 Analytic Solution of Initial-Value Problems via DSolv			tic Solution of Initial-Value Problems via DSolve / 17	
		1.3.1	DSolve / 17	
Exercises for Sec. 1.3 / 20				
1.4 Numerica		Nume	erical Solution of Initial-Value Problems / 23	
		1.4.1	NDSolve / 23	
•		1.4.2	Error in Chaotic Systems / 27	
		1.4.3	Euler's Method / 31	
		1.4.4	The Predictor-Corrector Method of Order 2 / 38	
	•	1.4.5	Euler's Method for Systems of ODEs / 41	
		1.4.6	The Numerical N-Body Problem: An Introduction to Molecular Dynamics / 43	
	Evereises for Sec. 1.4. / 50			

vi	CONTENTS					
	1.5	Bound	dary-Value Problems / 62			
		1.5.1	Introduction / 62			
		1.5.2	Numerical Solution of Boundary-Value Problems: The Shooting Method / 64			
	Exe	rcises f	or Sec. 1.5 / 67			
	1.6	Linea	r ODEs / 70			
		1.6.1	The Principle of Superposition / 70			
		1.6.2	The General Solution to the Homogeneous Equation / 71			
		1.6.3	Linear Differential Operators and Linear Algebra / 74			
		1.6.4	Inhomogeneous Linear ODEs / 78			
	Exe	rcises f	or Sec. 1.6 / 84			
	Ref	erences	s / 86			
2	FO	JRIER	SERIES AND TRANSFORMS	87		
	2.1	Fouri	er Representation of Periodic Functions / 87			
		2.1.1	Introduction / 87			
		2.1.2	Fourier Coefficients and Orthogonality Relations / 90			
		2.1.3	Triangle Wave / 92			
		2.1.4	Square Wave / 95			
		2.1.5	Uniform and Nonuniform Convergence / 97			
		2.1.6	Gibbs Phenomenon for the Square Wave / 99			
		2.1.7	Exponential Notation for Fourier Series / 102			
		2.1.8	Response of a Damped Oscillator to Periodic Forcing / 105			
		2.1.9	Fourier Analysis, Sound, and Hearing / 106			
	Exe	Exercises for Sec. 2.1 / 109				
	2.2	2 Fourier Representation of Functions Defined on a Finite				
		Interval / 111				
			Periodic Extension of a Function / 111			
			Even Periodic Extension / 113			
			Odd Periodic Extension / 116			
		2.2.4	Solution of Boundary-Value Problems Using Fourier Series / 118			
	Exe	Exercises for Sec. 2.2 / 121				
	2.3	3 Fourier Transforms / 122				
		2.3.1	Fourier Representation of Functions on the Real Line / 122			
			Fourier sine and cosine Transforms / 129			
		2.3.3	Some Properties of Fourier Transforms / 131			
		234	The Dirac & Function / 135			

2.3.5 Fast Fourier Transforms / 144

Exercises for Sec. 2.3 / 164

Function for the Oscillator / 158

Response of a Damped Oscillator to General Forcing. Green's

4.7	OI CCI.	18 Functions / 109			
	2.4.1	Introduction / 169			
	2.4.2	Constructing the Green's Function from Homogeneous Solutions / 171			
	2.4.3	Discretized Green's Function I: Initial-Value Problems by Matrix Inversion / 174			
	2.4.4	Green's Function for Boundary-Value Problems / 178			
	2.4.5	Discretized Green's Functions II: Boundary-Value Problems by Matrix Inversion / 181			
Exe	rcises f	or Sec. 2.4 / 187			
Ref	erences	/ 190			
INT	RODU	CTION TO LINEAR PARTIAL DIFFERENTIAL EQUATIONS	191		
3.1	-	ation of Variables and Fourier Series Methods in Solutions of Vave and Heat Equations / 191			
	3.1.1	Derivation of the Wave Equation / 191			
	3.1.2	Solution of the Wave Equation Using Separation of Variables / 195			
	3.1.3	Derivation of the Heat Equation / 206			
	3.1.4	Solution of the Heat Equation Using Separation of Variables / 210			
Exe	rcises f	or Sec. 3.1 / 224			
3.2	Laplace's Equation in Some Separable Geometries / 231				
	3.2.1	Existence and Uniqueness of the Solution / 232			
	3.2.2	Rectangular Geometry / 233			
	3.2.3	2D Cylindrical Geometry / 238			
	3.2.4	Spherical Geometry / 240			
	3.2.5	3D Cylindrical Geometry / 247			
Exe	rcises f	or Sec. 3.2 / 256			
Ref	erences	3 / 260			
EIG	ENMO	DE ANALYSIS	261		
4.1	Gene	ralized Fourier Series / 261			
	4.1.1	Inner Products and Orthogonal Functions / 261			
	4.1.2	Series of Orthogonal Functions / 266			
	4.1.3	Eigenmodes of Hermitian Operators / 268			
	4.1.4	Eigenmodes of Non-Hermitian Operators / 272			
Exe	rcises f	for Sec. 4.1 / 273			
4.2	Beyond Separation of Variables: The General Solution of the 1D Wave and Heat Equations / 277				
	4.2.1	Standard Form for the PDE / 278			

	4.2.2	Generalized Fourier Series Expansion for the Solution / 280	
Exe	rcises f	or Sec. 4.2 / 294	
4.3		on's Equation in Two and Three Dimensions / 300	
	4.3.1	·	
	4.3.2	Green's Function / 301	
		Expansion of g and ϕ in Eigenmodes of the Laplacian Operator $/$ 302	
	4.3.4	Eigenmodes of ∇^2 in Separable Geometries / 304	
Exe		or Sec. 4.3 / 324	
4.4		Wave and Heat Equations in Two and Three nsions / 333	
	4.4.1	Oscillations of a Circular Drumhead / 334	
	4.4.2	Large-Scale Ocean Modes / 341	
	4.4.3	The Rate of Cooling of the Earth / 344	
Exe		or Sec. 4.4 / 346	
Refe	erences	4 / 354	
PAF	RTIAL [DIFFERENTIAL EQUATIONS IN INFINITE DOMAINS 3	355
5.1	Fourier Transform Methods / 356		
	5.1.1	The Wave Equation in One Dimension / 356	
	5.1.2	Dispersion; Phase and Group Velocities / 359	
	5.1.3	Waves in Two and Three Dimensions / 366	
Exe	rcises fo	or Sec. 5.1 / 386	
5.2	The W	VKB Method / 396	
	5.2.1	WKB Analysis without Dispersion / 396	
	5.2.2	WKB with Dispersion: Geometrical Optics / 415	
Exer	cises fo	or Sec. 5.2 / 424	
5.3	Wave 2	Action (Electronic Version Only)	
	<i>5.3.1</i>	The Eikonal Equation	
	5.3.2	Conservation of Wave Action	
Exer	cises for	r Sec. 5.3	
Refe	rences	/ 432	
	MERICA MATION	AL SOLUTION OF LINEAR PARTIAL DIFFERENTIAL 4	35
6.1	The G	alerkin Method / 435	
		Introduction / 435	
		Boundary-Value Problems / 435	
		Time-Dependent Problems / 451	
Exer		or Sec. 6.1 / 461	

6.2	Grid I	Methods / 464			
	6.2.1	Time-Dependent Problems / 464			
	6.2.2	Boundary-Value Problems / 486			
Exer	cises fo	or Sec. 6.2 / 504			
6.3	Nume	rical Eigenmode Methods (Electronic Version Only)			
	6.3.1	Introduction			
	6.3.2	Grid-Method Eigenmodes			
	6.3.3	Galerkin-Method Eigenmodes			
	6.3.4	WKB Eigenmodes			
Exer	cises fo	r Sec. 6.3			
Refe	erences	/ 510			
NOI	VLINE	AR PARTIAL DIFFERENTIAL EQUATIONS	511		
7.1	The N	Method of Characteristics for First-Order PDEs / 511			
	7.1.1	Characteristics / 511			
	7.1.2	Linear Cases / 513			
	7.1.3	Nonlinear Waves / 529			
Exe	rcises f	or Sec. 7.1 / 534			
7.2	The K	ne KdV Equation / 536			
	7.2.1	Shallow-Water Waves with Dispersion / 536			
	7.2.2	Steady Solutions: Cnoidal Waves and Solitons / 537			
	7.2.3	Time-Dependent Solutions: The Galerkin Method / 546			
	7.2.4	Shock Waves: Burgers' Equation / 554			
Exe	rcises f	or Sec. 7.2 / 560			
<i>7.3</i>	The Particle-in-Cell Method (Electronic Version Only)				
	7.3.1	Galactic Dynamics			
	7.3.2	Strategy of the PIC Method			
	7.3.3	Leapfrog Method			
	7.3.4	Force			
	7.3.5	Examples			
Exer	cises fo	r Sec. 7.3			
Refe	erences	/ 566			
INT	RODU	CTION TO RANDOM PROCESSES	567		
8.1	Rande	om Walks / 567			
	8.1.1	Introduction / 567			
	8.1.2	The Statistics of Random Walks / 568			
Exe	rcises f	or Sec. 8.1 / 586			
8.2	Thern	nal Equilibrium / 592			
	8.2.1	Random Walks with Arbitrary Steps / 592			

		8.2.2	Simulations / 598		
		8.2.3	Thermal Equilibrium / 605		
	Exercises for Sec. 8.2 / 609				
	8. <i>3</i>	The I Versio	Rosenbluth-Teller-Metropolis Monte Carlo Method (Electronic on Only)		
		8.3.1	Theory		
		8.3.2	Simulations		
	Exe	rcises fo	or Sec. 8.3		
	Ref	erence	s / 615		
9	AN INTRODUCTION TO MATHEMATICA (ELECTRONIC VERSION ONLY)				
-	9.1	Starti	ng Mathematica		
	9.2	Math	ematica Calculations		
		9.2.1	Arithmetic		
		9.2.2	Exact vs. Approximate Results		
		9.2.3	Some Intrinsic Functions		
		9.2.4	Special Numbers		
		9.2.5	Complex Arithmetic		
		9.2.6	The Function N and Arbitrary-Precision Numbers		
	Exer		or Sec. 9.2		
	9.3	The N	Nathematica Front End and Kernel		
	9.4	Using	Previous Results		
		9.4.1	The % Symbol		
		9.4.2	Variables		
		9.4.3	Pallets and Keyboard Equivalents		
	9.5	Lists,	Vectors, and Matrices		
		9.5.1	Defining Lists, Vectors, and Matrices		
		9.5.2	Vectors and Matrix Operations		
		9.5.3	Creating Lists, Vectors, and Matrices with the Table Command		
		9.5.4	Operations on Lists		
	Exercises for Sec. 9.5				
	9.6	Plottir	ng Results		
			The Plot Command		
		9.6.2	The Show Command		
			Plotting Several Curves on the Same Graph		
		9.6.4	The ListPlot Function		
		9.6.5	Parametric Plots		
			3D Plots		
		9.6.7	Animations		

	9.6.8 2	Add-On Packages	
Exerc	ises for	Sec. 9.6	
9.7	Help for Mathematica Users		
9.8	8 Computer Algebra		
	9.8.1	Manipulating Expressions	
	9.8.2	Replacement	
	9.8.3	Defining Functions	
	9.8.4	Applying Functions	
	9.8.5	Delayed Evaluation of Functions	
	9.8.6	Putting Conditions on Function Definitions	
Exerc	ises for	Sec. 9.8	
9.9	Calcul	us	
	9.9.1	Derivatives	
	9.9.2	Power Series	
	9.9.3	Integration	
Exerc	ises for	Sec. 9.9	
9.10	Analyt	ic Solution of Algebraic Equations	
	9.10.1	Solve and NSolve	
Exerc	ises for	Sec. 9.10	
9.11	Nume	rical Analysis	
	9.11.1	Numerical Solution of Algebraic Equations	
	9.11.2	Numerical Integration	
	9.11.3	Interpolation	
	9.11.4	Fitting	
Exerc	cises for	Sec. 9.11	
9.12	Summ	ary of Basic Mathematica Commands	
	9.12.1	Elementary Functions	
	9.12.2	Using Previous Results; Substitution and Defining Variables	
	9.12.3	Lists, Tables, Vectors and Matrices	
	9.12.4	Graphics	
	9.12.5	Symbolic Mathematics
