Preface	xvii
1 Introduction to Cell Proliferation and Cell Death	1
<i>David Hughes and Huseyin Mehmet</i>	
1.1 The structure and function of the mammalian cell and nucleus	1
1.2 Cell proliferation and cell death – essential and interconnected cellular processes	3
1.3 The laboratory study of dividing and dying cells	4
1.4 Studying cell proliferation	4
1.5 Studying cell death	7
1.6 New molecules – where cell proliferation and cell death meet?	9
1.7 References	10
2 Determination of Cell Number	13
<i>Ian Zachary</i>	
2.1 Introduction	13
2.2 Measurement of cell number	14
Protocol 2.1: Cell counting using a haemocytometer	16
Protocol 2.2: Cell counting using a Coulter counter	18
2.3 Indirect measurement of cell number	19
Protocol 2.3: The MTT assay	20
2.4 Direct measurement of mitogenic activity in cell culture	21
Protocol 2.4: Incorporation of [³ H]thymidine into acid-insoluble material	23
Protocol 2.5: Autoradiography of labelled nuclei	25
Protocol 2.6: BrdU incorporation and staining	27
Protocol 2.7: Bromodeoxyuridine anti-bromodeoxyuridine demonstration of biopsy samples	30
Protocol 2.8: Analysis of the cell cycle using flow cytometry	33
2.5 Measurement of cell proliferation <i>in vivo</i>	34
2.6 Tracking cell division <i>in vitro</i> and <i>in vivo</i> using CFSE dilution and flow cytometry	35
2.7 References	35
3 Nuclear Changes in Dividing Cells	37
<i>Christopher P. Maske and David J. Vaux</i>	
3.1 Introduction	37
3.2 Dissecting nuclear dynamics with fluorescent proteins	39
3.3 Fluorescent <i>in situ</i> hybridisation of nucleic acid	41
Protocol 3.1: FISH of interphase cells	43

3.4	Immunofluorescence microscopy and its applications	45
	Protocol 3.2a: Fixation of cells and tissues for immunofluorescence microscopy	46
	Protocol 3.2b: Antibody labelling of cells and tissues	47
	Protocol 3.2c: Mowiol mounting medium	48
3.5	Electron microscopy techniques	49
	Protocol 3.3: Resin embedding	51
	Protocol 3.4a: Cryo-immunoelectron microscopy sample preparation	54
	Protocol 3.4b: Immunolabelling of cryosections	56
	Protocol 3.4c: Double labelling with colloidal gold, using colloidal gold with a mouse monoclonal and rabbit polyclonal antibody	57
3.6	Manipulation of the cell cycle	59
	Protocol 3.5: Mitotic shake-off	60
	Protocol 3.6a: Mitotic block and synchronisation	62
	Protocol 3.6b: Double thymidine block	63
3.7	Biochemical analysis of nuclear processes	64
	Protocol 3.7: Nuclear isolation from cultured cells	65
	Protocol 3.8: Preparation of mitotic extracts	66
	Protocol 3.9: Preparation of a nuclear lysate for immunoprecipitation and ELISA	67
	Protocol 3.10: Electrophoretic analysis of molecular changes	70
	Protocol 3.11: In gel digestion of proteins for proteomic analysis	72
3.8	References	74

4 Cell Cycle Proteins **77**

Nicholas C. Lea and N. Shaun B. Thomas

4.1	Overview. How cell cycle proteins regulate the $G_0 \rightarrow G_1 \rightarrow S$ phase transitions	77
4.2	Methods for analysing the cell cycle	79
	Protocol 4.1: Flow cytometric method for counting live versus dead cells	80
	Protocol 4.2: Counting cell divisions using CFSE staining	82
	Protocol 4.3: Flow cytometric analysis of cell cycle by BrdU incorporation	83
	Protocol 4.4: Two colour cell cycle analysis and cell sorting	87
	Protocol 4.5: Preparation and analysis of chromatin and non-chromatin associated proteins	90
4.3	Specific methods for analysing cell cycle proteins. Protein modifications: phosphorylation	92
	Protocol 4.6: Analysis by western blotting	93
	Protocol 4.7: λ -protein phosphatase	96
	Protocol 4.8: Labelling with [32 P]orthophosphate	99
	Protocol 4.9: Phosphorylation of synthetic peptides	101
	Protocol 4.10: Alternative methods for determining phosphorylation sites	104
4.4	O-linked glycosylation	105
	Protocol 4.11: Use of lectins	106
	Protocol 4.12: Radioactive galactosylation <i>in vitro</i>	108
	Protocol 4.13: Determination of the type and site of glycosylation	109
4.5	Acetylation	110
	Protocol 4.14: Detecting acetylated proteins by western blotting	111
	Protocol 4.15: Acetylation <i>in vitro</i>	112
4.6	Functional analysis	113
	Protocol 4.16: TAT-protein transduction	115
4.7	References	117

5	Telomeres and the Control of Cell Division	123
	<i>Predrag Slijepcevic</i>	
5.1	Introduction	123
5.2	Mechanisms of telomere maintenance	124
5.3	Abnormalities in telomere maintenance that affect cell division progression	126
5.4	Telomere maintenance in mammalian DNA repair mutants	127
5.5	Telomere maintenance and apoptosis	129
5.6	Methods of telomere length measurements	129
	Protocol 5.1: Telomere length analysis by Southern blot	130
	Protocol 5.2: Telomere length analysis by Q-FISH	135
5.7	Methods for detection of telomerase activity	138
	Protocol 5.3: Telomerase detection	139
5.8	References	142
6	The Nucleolus and Cell Proliferation	147
	<i>David Hughes and Antonio Torres-Montaner</i>	
6.1	Introduction	148
6.2	The structure and function of the nucleolus	149
6.3	Techniques for studying nucleolar activity	153
	Protocol 6.1: Basic AgNOR room temperature procedure for cryostat and paraffin wax sections	157
	Protocol 6.2: One step 70°C procedure for general purpose, rapid AgNOR demonstration	159
	Protocol 6.3: AgNOR procedure for cytological preparations	160
	Protocol 6.4: Wet autoclave pretreatment in AgNOR demonstration	162
	Protocol 6.5: Microwave modification of the AgNOR procedure	163
	Protocol 6.6: Fixation – microwave modification of the AgNOR procedure	164
	Protocol 6.7: Gold chloride blue-black toning of AgNOR results	165
	Protocol 6.8: Potassium hexacyanoferrate (III) blue toning of AgNOR results	166
	Protocol 6.9: Chromogenic toning of AgNOR results	167
	Protocol 6.10: Combined DAPI and AgNOR demonstration of nuclear and nucleolar components	168
	Protocol 6.11: Combined Feulgen and AgNOR demonstration of nuclear and nucleolar components	169
	Protocol 6.12: Immunoperoxidase procedure for intranuclear immunocytochemistry	171
	Protocol 6.13: Saponin permeabilisation for intracellular immunocytochemistry	173
	Protocol 6.14: Nonidet permeabilisation for intracellular immunocytochemistry	174
	Protocol 6.15: Acetone permeabilisation for intracellular immunocytochemistry	175
	Protocol 6.16: Temperature permeabilisation for intracellular immunocytochemistry	176
6.4	References	178
7	Membrane Alterations in Dying Cells	185
	<i>Hugo van Genderen, Heidi Kenis, Ewald Dumont, Waander van Heerde, Leo Hofstra and Chris P. Reutelingsperger</i>	
7.1	Introduction	185
7.2	Apoptosis	186

7.3	Phospholipid asymmetry of the plasma membrane	187
7.4	Structure and function of Annexin A5	189
	Protocol 7.1: Flow cytometric analysis of phosphatidylserine exposure and plasma membrane permeability of Jurkat cells, which are triggered to execute apoptosis by anti-Fas antibody	191
	Protocol 7.2: Confocal scanning laser microscopic analysis of phosphatidylserine exposure and plasma membrane permeability of apoptotic Jurkat cells	192
	Protocol 7.3: Light microscopic analysis of apoptotic cells in mouse embryonic tissue using Annexin A5-biotin	194
	Protocol 7.4: Light microscopic analysis of apoptotic cells in the ischaemia/reperfusion injured heart of the adult mouse using Annexin A5-biotin	196
	Protocol 7.5: Non-invasive analysis of cell death in patients using technetium-labelled Annexin A5 and SPECT	198
7.5	Detection of plasma membrane permeability	199
7.6	References	199
8	Morphological Changes in Dying Cells	201
	<i>Katharina D'Herde, Sylvie Mussche and Karin Roberg</i>	
8.1	Introduction	201
8.2	Determination of apoptosis by light microscopy	204
	Protocol 8.1: Methyl green nuclear staining	205
	Protocol 8.2: Haematoxylin and eosin staining (H&E)	206
	Protocol 8.3: Feulgen staining	207
8.3	Determination of apoptosis by fluorescence microscopy	208
	Protocol 8.4: DAPI staining	209
	Protocol 8.5: AO staining	211
	Protocol 8.6: TUNEL labelling	212
	Protocol 8.7: Mitochondrial staining by CM-H ₂ TMRos	214
8.4	Determination of apoptosis by electron microscopy	216
	Protocol 8.8: Preparation of cells growing in Petri dishes for transmission electron microscopy	217
8.5	Location of cytochrome c during apoptosis	219
	Protocol 8.9: Immunofluorescence detection of cytochrome c in cultured cells	221
	Protocol 8.10: Pre-embedding immunogold labelling of intracellular antigens (cytochrome c) using ultra-small gold probes	223
	Protocol 8.11: Silver enhancement of gold labelling	224
	Protocol 8.12: Localisation of cytochrome c in respiring mitochondria at the LM and EM level	226
8.6	Detection and localisation of lysosomal protease activity during apoptosis	227
8.7	References	228
9	Caspase Detection and Analysis	233
	<i>Emma M. Creagh, Colin Adrain and Seamus J. Martin</i>	
9.1	Introduction	233
9.2	Direct detection of caspase activation status by SDS-PAGE/immunoblot analysis	235
	Protocol 9.1: Direct detection of caspase activation status by SDS-PAGE/immunoblot analysis	236

9.3	Indirect detection of caspase activity by immunoblotting for caspase substrate proteins	238
	Protocol 9.2: Indirect detection of caspase activity by immunoblotting for caspase substrate proteins	239
9.4	Detection of active caspases or cleaved caspase substrates in individual cells by immunostaining	240
	Protocol 9.3: Detection of active caspases or cleaved caspase substrates in individual cells by immunostaining	241
9.5	Use of cell-free extracts as a source of cytochrome c-inducible active caspases and caspase substrates	243
	Protocol 9.4: Use of cell-free extracts as a source of cytochrome c-inducible active caspases and caspase substrates	244
9.6	Use of radiolabelled caspases or caspase substrates as a readout of caspase activity	246
	Protocol 9.5: Use of radiolabelled caspases or caspase substrates to detect caspase activity	247
9.7	Measurement of caspase activity using fluorogenic/colorimetric substrate peptides	249
	Protocol 9.6: Measurement of caspase activity using fluorogenic/colorimetric substrate peptides	250
9.8	References	252

10 Mitochondrial Outer-Membrane Permeabilization in Apoptosis **255**

Nigel J. Waterhouse, Jean-Ehrland Ricci, Helen M. Beere, Joseph A. Trapani and Douglas R. Green

10.1	Introduction	256
10.2	Pro-apoptotic proteins in the mitochondria are released into the cytoplasm during apoptosis	256
	Protocol 10.1: Isolation of cytosolic extracts	259
	Protocol 10.2: Isolation of soluble membrane extracts	260
	Protocol 10.3: Isolation of mouse liver mitochondria	261
	Protocol 10.4: Isolation of mitochondria from cultured cells	262
	Protocol 10.5: Induction of permeability transition (PT) in isolated mitochondria	263
	Protocol 10.6: Induction of mitochondrial outer membrane permeabilisation	264
10.3	Detecting the translocation of proteins to and from mitochondria in cells	265
	Protocol 10.7: Cellular fractionation to detect cytochrome c release	266
	Protocol 10.8: Detection of apoptosis inducing factor	269
	Protocol 10.9: Detecting adenylate kinase	270
	Protocol 10.10: Measurement of protein translocation by immunocytochemistry	271
	Protocol 10.11: Quantitative analysis of cytochrome c-GFP redistribution in cells by flow cytometry	272
10.4	The impact of mitochondrial outer membrane permeabilisation on mitochondrial function	273
	Protocol 10.12: Measurement of $\Delta\Psi_m$ in live cells	276
	Protocol 10.13: Measurement of $\Delta\Psi_m$ in cells that are to be fixed	277
	Protocol 10.14: ATP measurements in cells	278
	Protocol 10.15: Measurement of oxygen consumption by isolated mitochondria	280

	Protocol 10.16: Measurement of oxygen consumption in permeabilised cells	283
	Protocol 10.17: Measurement of reactive oxygen species in intact cells	284
10.5	Physical changes in mitochondria	285
	Protocol 10.18: Measurement of complex III accessibility	286
	Protocol 10.19: Measurement of complex IV accessibility	287
	Protocol 10.20: Measurement of mitochondrial swelling	288
	Protocol 10.21: Detection of PT in isolated mitochondria using calcein-AM fluorescence	289
	Protocol 10.22: Detection of PT in cells using calcein-AM fluorescence	290
	Protocol 10.23: Determination of mitochondrial mass	291
10.6	References	292
11	Nuclear Changes in Dying Cells	295
	<i>Eric H. Baehrecke and Huseyin Mehmet</i>	
11.1	Introduction	295
11.2	Distinguishing between apoptosis and necrosis	296
11.3	Morphological changes in nuclear structure	296
	Protocol 11.1: Haematoxylin and eosin staining of cell monolayers	298
	Protocol 11.2: Histological staining of tissue sections with haematoxylin and eosin	299
	Protocol 11.3: PI staining of nuclei in cell monolayers	301
	Protocol 11.4: Hoechst 33342 / PI staining of cells in culture	302
	Protocol 11.5: AO staining to assay apoptosis in <i>Drosophila</i> embryos	303
11.4	Proteolysis of nuclear proteins	304
	Protocol 11.6: Western blotting analysis of PARP cleavage	305
11.5	DNA fragmentation in apoptosis	307
	Protocol 11.7: Localisation of EndoG or AIF in cell nuclei	308
	Protocol 11.8: Detection of nucleosome ladders by agarose gel electrophoresis	310
	Protocol 11.9: Detection of high molecular weight DNA fragments by gel electrophoresis	312
	Protocol 11.10: Detection of low molecular weight DNA laddering in cultured cells	314
	Protocol 11.11: TUNEL analysis of fragmented DNA in whole mount <i>Drosophila</i> embryos	315
	Protocol 11.12: <i>In situ</i> end-labelling of fragmented DNA in cell monolayers	317
	Protocol 11.13: <i>In situ</i> end-labelling of tissue sections	319
	Protocol 11.14: Comet assay for detection of apoptotic and necrotic nuclei	321
11.6	Concluding remarks	325
11.7	References	325
12	Flow Cytometric Studies of Cell Death	329
	<i>Marco Ranalli, Andrew Oberst, Marco Corazzari and Vincenzo De Laurenzi</i>	
12.1	Introduction	329
12.2	Morphological assessment of apoptosis	332
12.3	Methods based on membrane permeability changes occurring during apoptosis	333
	Protocol 12.1: FDA/PI staining	335
	Protocol 12.2: Hoechst 33258/PI staining	337
12.4	Annexin V staining to detect changes in membrane lipid distribution	338
	Protocol 12.3: Annexin V binding	339

12.5	Methods based on DNA fragmentation	340
	Protocol 12.4: PI detection of DNA fragmentation	341
	Protocol 12.5: TUNEL assay	345
12.6	Analysis of changes in mitochondrial potential	347
	Protocol 12.6: Evaluation of mitochondrial potential	348
12.7	Other applications of flow cytometry to apoptosis	350
	Protocol 12.7: Calpain activity assay	352
	Protocol 12.8: Cytofluorimetric assessment of free radical formation	353
	Protocol 12.9: Evaluation of cell calcium content	355
12.8	References	357
