CONTENTS

PREFACE xiii

1 INTRODUCTION 1

1.1 Significance of the Research 1

1.2 Scope of the Research 3

1.2.1 End-System's QoS Support 3

1.2.2 QoS Provision via Network Support 4

1.2.3 QoS Interaction Between End-Systems and QoS-Enabled Networks 6

1.3 Contribution of the Research 7

1.4 Outline of this Book 9

2 QUALITY OF SERVICE (QOS) PROVISION: AN OVERVIEW 13

2.1 Introduction 13

2.2 QoS Performance Parameters 14

2.3 IP-Based QoS-Providing Mechanisms 15

2.3.1 RSVP/Integrated Services (IntServ) 15

2.3.2 Multi-Layer Label Switching 17

2.3.3 QoS Routing 18

2.3.4 DiffServ Network Support for QoS Provision 19

2.4 Architectural Model for Differentiated Services 21

2.4.1 Packet Classification 22

2.4.2 Traffic Conditioning 24

2.4.3 Queue Management 25

2.4.4 Scheduling 25
2.4.5 Admission Control 26
2.5 Service Differentiation for Proper QoS Provision 28
2.5.1 Absolute Service Differentiation 28
2.5.2 Relative Service Differentiation 30
2.5.3 Quantitative Service Differentiation 31
2.6 Approaches to Increasing Service Assurance and Quality 31
2.6.1 Inter-Domain Resource Allocation 31
2.6.2 Stateless Core Architecture with Intelligent Boundary Node 32
2.6.3 Intra-Domain Behavior Control 33
2.6.4 Inter-Operation Among Integrated and Differentiated Services 34
2.6.5 Multicasting in DiffServ Networks 35
2.6.6 QoS Interaction Between CM Applications and DiffServ Networks 36

3 GENERAL QOS MAPPING FRAMEWORK 41
3.1 Introduction 41
3.2 Overall Proposed QoS Mapping Framework in a DiffServ Network 43
3.2.1 Overall QoS Mapping Framework 43
3.2.2 Deployment Issues 45
3.3 Video Packet Categorization Based on the Relative Priority Index (RPI) 48
3.3.1 Desired Characteristics for Prioritization 48
3.3.2 Macroblock-Level Corruption Model 50
3.3.3 Simplified RLI Association and Categorization 56
3.4 QoS Mapping Problem Formulation and Solution 61
3.4.1 QoS Mapping Problem Formulation 62
3.4.2 Ideal Case for Per-Flow QoS Mapping 63
3.5 Experimental Results 68
3.5.1 Experimental Setting Through the Two-State Markov Model for the Ideal Case 68

3.5.2 Performance of Optimal QoS Mapping in the Ideal Case 68
3.6 Conclusions 69

4 PACKET-FORWARDING MECHANISM WITH STATIC QOS MAPPING 73
4.1 Introduction 73
4.2 Stable and Persistent Service Differentiation Based on Active Queue Management (ACM) and Weighted Fair Queueing (WFQ) 74
4.3 QoS Mapping Scenarios 77
4.3.1 Single-Queue (SQ) Scenario with RLI Prioritization 77
4.3.2 Multiple-Queue (MQ) Scenario with RLI Prioritization 78
4.3.3 MQ Scenario with Both RLI and RDI 81
4.4 Experimental Results 81
4.4.1 SQ System with RLI 83
4.4.2 MQ System with RLI 84
4.4.3 MQ System with Both RLI and RDI 92
4.5 Conclusions 94

5 DYNAMIC QOS MAPPING CONTROL FOR CM STREAMING 95
5.1 Introduction 95
5.2 Proposed QoS Mapping Control Architecture 96
5.3 Dynamic QoS Mapping Mechanism for Aggregated Flows 98
5.3.1 Dynamic Feedforward QoS Mapping Control 99
5.3.2 Dynamic Feedback QoS Mapping Control 102
5.4 An Analysis of the Aggregated Traffic Marker 103
5.4.1 Isolated trTCM Case 105
5.4.2 Proposed Interconnected trTCM Case 105
5.5 Performance Evaluations 107
5.5.1 Simple Comparison Between Isolated and Interconnected trTCMs 107
5.5.2 Dynamic QoS Mapping Control 108
5.6 Conclusions 115

6 SOURCE PRIORITY PACKETIZATION AND RATE ADAPTATION FOR MPEG-4 VIDEO 117
6.1 Introduction 117
6.2 Overview of the Proposed System 120
6.3 Detailed Components of Proposed Systems 122
6.3.1 Rate Adaptation with Scalable Coding 122
6.3.2 Prioritized Packetization 125
6.3.3 Differentiated Forwarding 126
6.4 Experimental Results 128
6.4.1 Scenario 1: Differentiated Forwarding of BL Packets 128
6.4.2 Scenario 2: Differentiated Forwarding of EL Packets 129
6.4.3 Impact of Packet Priority Distribution on UEP Gain 132
6.5 Conclusions 133

7 VIDEO STREAMING USING FEC OVER QOS-CONTROLLED NETWORKS 135
7.1 Introduction 135
7.2 Background 136
7.2.1 Scalable or Layered and Error-Resilient Video Coding with Loss Control (Source Side) 136
7.2.2 QoS-Controlled Network (Network Side) 139
7.3 JSN Approach 139
7.3.1 Using a Reservation-Based Network 141
7.3.2 Using a Service Differentiation Network 142
7.4 Analysis of Proposed JSN 144
7.4.1 Method of Changing DS Levels 144
7.4.2 Method of Splitting Application Source Data 145
7.4.3 Analysis of Data Splitting with Total Cost Constraint 146
7.5 Performance Evaluations 148
7.5.1 Performance Metrics for End-to-End Video Quality Peak 148
7.5.2 JSN Adaptations in IntServ/RSVP 149
7.5.3 JSN Adaptations in DiffServ 150
7.6 Conclusions 155

8 ENHANCED SERVICE DIFFERENTIATION FOR LAYERED VIDEO MULTICAST **159**

8.1 Introduction 159

8.2 Receiver-Driven Layered Multicast (RLM) and DiffServ Networks 161

8.3 Enhanced AQM for Join Experiment 164

8.3.1 Confined Averaged Queue Length 165

8.3.2 Virtual Queue Limit 165

8.3.3 Weighted RIO 166

8.4 Hierarchical Priority Marking on Layered Video 168

8.4.1 Sender-Driven Marking 168

8.4.2 Receiver-Driven Marking 168

8.5 Experimental Results 170

8.5.1 Join Experiment 171

8.5.2 Packet Loss and Service Differentiability 175

8.6 Conclusions 177

9 CONCLUSIONS **179**

BIBLIOGRAPHY **181**

INDEX **197**
