Table of Contents

1	Introduction	1
1.1	ABRASIVE PROCESSES	1
1.1.1	Grinding	2
1.1.2	Honing	3
1.1.3	Lapping	3
1.1.4	Polishing	3
1.2	ABRASIVES	4
1.3	TRIBOLOGICAL PRINCIPLES	5
1.3.1	Two-body Abrasion	6
1.3.2	Three-body Abrasion.....	6
1.4	A TYPICAL GRINDING PROCESS	7
1.5	A TRIBOLOGICAL SYSTEM.....	10
	REFERENCES	11
2	Tribosystems of Abrasive Machining Processes	13
2.1	INTRODUCTION.....	13
2.2	STRUCTURE OF TRIBOMECHANICAL PROCESSING	17
2.2.1	The Interconnecting Elements in the Tribosystem Structure	17

2.2.2	The Optimum Properties of the Tribosystem	17
2.2.3	Interrelationships Between System Elements	19
2.2.4	The Total Structural System	23
2.3	THE THREE TRIBOSYSTEMS IN ABRASIVE MACHINING	25
2.3.1	Bonded Abrasive Processes	25
2.3.2	Loose Abrasive Processes	28
2.3.3	Dressing Processes	29
2.3.4	Basic Parameters of the Tribosystem Structure	30
2.4	MODELING TRIBOSYSTEMS OF ABRASIVE PROCESSES	30
2.4.1	The Influence of the Workmaterials in Modeling	33
2.4.2	The Influence of the Shape and Size of the Contact Surface	35
2.4.3	The Influence and Measurement of Cutting Forces	35
2.5	CONCLUSIONS	38
	REFERENCES	38

3 Kinematic Models of Abrasive Contacts.....41

3.1	INTRODUCTION	41
3.1.1	Machine Control Variables	43
3.1.2	Workpiece Material Removal	43
3.1.3	Volume Tool Wear	45
3.1.4	Grinding Ratio	45
3.2	BASIC ANALYSIS OF SURFACE GRINDING	46
3.2.1	Micromilling Analogy	46
3.2.2	Geometric Contact Length	48
3.2.3	Kinematic Contact Length	50
3.2.4	Grain Penetration Depth or Uncut Chip Thickness	51
3.2.5	Uncut Chip Aspect Ratio	54
3.3	CYLINDRICAL GRINDING CONTACTS	54
3.3.1	External Cylindrical Plunge Grinding	55
3.3.2	Removal Rate in Cylindrical Plunge Grinding	55

3.3.3	Effect of G-ratio on Removal Rate	56
3.3.4	Effect of G-ratio on Depth of Cut	57
3.3.5	Geometric Contact Length in Cylindrical Grinding	57
3.3.6	Uncut Chip Thickness in Cylindrical Grinding	59
3.3.7	Basic Parameters for Internal Cylindrical Grinding	60
3.3.8	Uncut Chip Aspect Ratio in Cylindrical Grinding	62
3.3.9	Angle Grinding of Cylindrical Parts	62
3.3.10	Comparisons of Surface, Internal, and External Grinding	64
3.3.11	Centerless Grinding	64
3.4	IMPLICATIONS OF THE STOCHASTIC NATURE OF GRINDING	67
3.4.1	Mean Uncut Chip Thickness	67
3.4.2	Cutting Edge Density	68
3.4.3	Mean Uncut Chip Cross-sectional Area	70
3.4.4	Equivalent Chip Thickness	71
3.4.5	Grain Spacing	72
3.4.6	Effect of Grain Shape	73
3.4.7	Effect of Increasing Grain Density	76
3.4.8	Effects on Grain Wear	78
3.4.9	Irregular Grain Spacing	79
3.4.10	Irregular Grain Depth	81
3.4.11	Factors Affecting Workpiece Roughness	82
3.5	EFFECT OF DRESSING	85
3.6	SUMMARY OF PRINCIPAL KINEMATIC PARAMETERS	87
	REFERENCES	89

4 Contact Mechanics **91**

4.1	CONTACT AREA	91
4.2	CONTACT LENGTH	93
4.2.1	Due To Deflection	93
4.2.2	Due To Depth of Cut	94
4.2.3	Combined Deflection and Depth of Cut	95

4.3	SMOOTH BODY ANALYSIS	99
4.4	ROUGH SURFACE ANALYSIS	103
4.5	EXPERIMENTAL MEASUREMENTS OF ROUGHNESS FACTOR (R_p)	106
4.5.1	Comparison With Measurements by Verkerk	107
4.5.2	Effect of Depth of Cut	108
4.5.3	Effect of Workspeed	110
4.5.4	Evaluation of Roughness Factor, R_p , and Contact Length, l_c	111
4.6	ELASTIC STRESSES DUE TO ABRASION	114
4.7	SUMMARY OF CONTACT STRESS IMPLICATIONS	117
