

# Materials Science of Polymers for Engineers

2nd Edition

Tim A. Osswald / Georg Menges

HANSER

# Table of Contents

|                                                              |           |
|--------------------------------------------------------------|-----------|
| <b>Part I Basic Principles .....</b>                         | <b>1</b>  |
| <b>1 Introduction to Polymers.....</b>                       | <b>3</b>  |
| 1.1 General Properties.....                                  | 3         |
| 1.2 Identification of Polymers.....                          | 10        |
| Problems .....                                               | 13        |
| References .....                                             | 13        |
| <b>2. Historical Background.....</b>                         | <b>15</b> |
| 2.1 From Natural to Synthetic Rubber.....                    | 15        |
| 2.2 Cellulose and the \$10,000 Idea.....                     | 21        |
| 2.3 Galalith - The Milk Stone.....                           | 24        |
| 2.4 Leo Baekeland and the Plastic Industry.....              | 25        |
| 2.5 Herman Mark and the American Polymer Education.....      | 27        |
| 2.6 Wallace Hume Carothers and Synthetic Polymers.....       | 31        |
| 2.7 Polyethylene - A Product of Brain and Brawn.....         | 34        |
| 2.8 The Super Fiber and the Woman who Invented it.....       | 37        |
| 2.9 One last Word - Plastics.....                            | 38        |
| References .....                                             | 41        |
| <b>3 Structure of Polymers .....</b>                         | <b>43</b> |
| 3.1 Macromolecular Structure of Polymers.....                | 43        |
| 3.2 Molecular Bonds and Inter-Molecular Attraction.....      | 45        |
| 3.3 Molecular Weight.....                                    | 45        |
| 3.4 Conformation and Configuration of Polymer Molecules..... | 51        |
| 3.5 Arrangement of Polymer Molecules.....                    | 55        |
| 3.5.1 Thermoplastic Polymers.....                            | 55        |
| 3.5.2 Amorphous Thermoplastics.....                          | 56        |
| 3.5.3 Semi-Crystalline Thermoplastics.....                   | 58        |
| 3.5.4 Thermosets and Cross-Linked Elastomers.....            | 67        |
| 3.6 Copolymers and Polymer Blends.....                       | 68        |
| 3.7 Polymer Additives.....                                   | 71        |
| 3.7.1 Flame Retardants.....                                  | 71        |
| 3.7.2 Stabilizers.....                                       | 73        |
| 3.7.3 Antistatic Agents.....                                 | 74        |
| 3.7.4 Fillers.....                                           | 74        |
| 3.7.5 Blowing Agents.....                                    | 75        |
| 3.8 Viscoelastic Behavior of Polymers.....                   | 76        |
| 3.8.1 Stress Relaxation Test.....                            | 76        |
| 3.8.2 Time-Temperature Superposition (WLF-Equationa).....    | 78        |
| 3.8.3 The Boltzmann Superposition Principle.....             | 80        |

---

|            |                                                                           |            |
|------------|---------------------------------------------------------------------------|------------|
| 3.8.4      | Applying Linear Viscoelasticity to Describe the behavior of Polymers..... | 81         |
| Examples   | .....                                                                     | 88         |
| Problems   | .....                                                                     | 91         |
| References | .....                                                                     | 94         |
| <b>4</b>   | <b>Thermal Properties of Polymers.....</b>                                | <b>97</b>  |
| 4.1        | Material Properties.....                                                  | 100        |
| 4.1.1      | Thermal Conductivity.....                                                 | 100        |
| 4.1.2      | Specific Heat.....                                                        | 107        |
| 4.1.3      | Density.....                                                              | 109        |
| 4.1.4      | Thermal Diffusivity.....                                                  | 112        |
| 4.1.5      | Linear Coefficient of Thermal Expansion.....                              | 113        |
| 4.1.6      | Thermal Penetration.....                                                  | 115        |
| 4.1.7      | Glass Transition Temperature.....                                         | 115        |
| 4.1.8      | Melting Temperature.....                                                  | 116        |
| 4.2        | Measuring Thermal Data.....                                               | 116        |
| 4.2.1      | Differential Thermal Analysis (DTA).....                                  | 117        |
| 4.2.2      | Differential Scanning Calorimeter (DSC).....                              | 118        |
| 4.2.3      | Thermomechanical Analysis (TMA).....                                      | 120        |
| 4.2.4      | Thermogravimetry (TGA).....                                               | 121        |
| 4.2.5      | Density Measurements.....                                                 | 122        |
| Examples   | .....                                                                     | 123        |
| Problems   | .....                                                                     | 124        |
| References | .....                                                                     | 128        |
| <b>5</b>   | <b>Rheology of Polymer Melts.....</b>                                     | <b>129</b> |
| 5.1        | Introduction .....                                                        | 129        |
| 5.1.1      | Continuum Mechanics.....                                                  | 129        |
| 5.1.2      | The Generalized Newtonian Fluid.....                                      | 131        |
| 5.1.3      | Normal Stresses in Shear Flow.....                                        | 133        |
| 5.1.4      | Deborah Number.....                                                       | 134        |
| 5.2        | Viscous Flow Models.....                                                  | 137        |
| 5.2.1      | The Power Law Model.....                                                  | 137        |
| 5.2.2      | The Bird-Carreau-Yasuda Model.....                                        | 139        |
| 5.2.3      | The Bingham Fluid.....                                                    | 140        |
| 5.2.4      | Elongational Viscosity.....                                               | 140        |
| 5.2.5      | Rheology of Curing Thermosets.....                                        | 142        |
| 5.2.6      | Suspension Rheology.....                                                  | 146        |
| 5.3        | Simplified Flow Models Common in Polymer Processing.....                  | 147        |
| 5.3.1      | Simple Shear Flow.....                                                    | 148        |
| 5.3.2      | Pressure Flow Through a Slit.....                                         | 148        |
| 5.3.3      | Pressure Flow Through a Tube - Hagen-Poiseuille Flow .....                | 149        |

|                |                                                                                     |            |
|----------------|-------------------------------------------------------------------------------------|------------|
| 5.3.4          | Couette Flow.....                                                                   | 150        |
| 5.4            | Viscoelastic Flow Models.....                                                       | 151        |
| 5.4.1          | Differential Viscoelastic Models.....                                               | 151        |
| 5.4.2          | Integral Viscoelastic Models.....                                                   | 154        |
| 5.5            | Rheometry .....                                                                     | 159        |
| 5.5.1          | The Melt Flow Indexer.....                                                          | 159        |
| 5.5.2          | The Capillary Viscometer.....                                                       | 159        |
| 5.5.3          | Computing Viscosity Using the Bagley and<br>Weissenberg-Rabinowitsch Equations..... | 162        |
| 5.5.4          | Viscosity Approximation Using the Representative ....<br>Viscosity Method.....      | 163        |
| 5.5.5          | The Cone-Plate Rheometer.....                                                       | 164        |
| 5.5.6          | The Couette Rheometer.....                                                          | 166        |
| 5.5.7          | Extensional Rheometry.....                                                          | 167        |
| 5.6            | Surface Tension.....                                                                | 170        |
|                | Examples .....                                                                      | 174        |
|                | Problems .....                                                                      | 179        |
|                | References .....                                                                    | 180        |
| <b>Part II</b> | <b>Influence of Processing on Properties.....</b>                                   | <b>183</b> |
| <b>6</b>       | <b>Introduction to Processing.....</b>                                              | <b>185</b> |
| 6.1            | Extrusion .....                                                                     | 185        |
| 6.1.1          | The Plasticating Extruder.....                                                      | 188        |
| 6.1.1.1        | The Solids Conveying Zone.....                                                      | 191        |
| 6.1.1.2        | The Melting Zone.....                                                               | 195        |
| 6.1.1.3        | The Metering Zone.....                                                              | 197        |
| 6.1.2          | Extrusion Dies.....                                                                 | 199        |
| 6.1.2.1        | Sheeting Dies.....                                                                  | 199        |
| 6.1.2.2        | Tubular Dies.....                                                                   | 201        |
| 6.2            | Mixing Processes.....                                                               | 202        |
| 6.2.1          | Distributive Mixing.....                                                            | 204        |
| 6.2.1.1        | Effect of Orientation.....                                                          | 205        |
| 6.2.2          | Dispersive Mixing.....                                                              | 208        |
| 6.2.2.1        | Break-Up of Particulate Agglomerates.....                                           | 208        |
| 6.2.2.2        | Break-Up of Fluid Droplets.....                                                     | 211        |
