

Adhesion and Adhesives Technology

An Introduction
2nd Edition

Alphonsus V. Pocius

HANSER

Contents

1	Introduction	1
1.1	Introduction and Chapter Objectives	1
1.2	Basic Definitions	1
1.3	Advantages and Disadvantages of Adhesive Bonding	2
1.4	Uses of Adhesive Bonding in Modern Industry	5
1.5	Economics of Adhesive Technology	11
1.6	Literature and Other Sources of Information	12
1.7	Summary	14
	References	14
2	The Mechanical Properties of Materials as They Relate to Adhesion	15
2.1	Introduction	15
2.2	Definition of Mechanical Stresses for Materials Testing	15
2.3	Stress-Strain Plots and the Definition of Materials Property Parameters	17
2.3.1	Tensile Forces	17
2.3.2	Shear Forces	20
2.3.3	Strain Energy Density	20
2.4	Introduction to Linear Elastic Fracture Mechanics	21
2.5	Introduction to Rheology of Liquids	24
2.6	Introduction to Linear Viscoelasticity	26
2.7	An Application of Materials Properties and Mechanics: The Bending of Beams	31
2.8	Summary	39
	Bibliography	39
	Problems and Review Questions	39
3	Mechanical Tests of Adhesive Bond Performance	43
3.1	Introduction	43
3.2	Failure Modes and the Definition of Practical Adhesion	43
3.3	Tensile Testing of Adhesive Bonds	44
3.4	Shear Loading of Adhesive Bonds	48
3.4.1	The Standard Lap Shear Specimen	48
3.4.2	Variations on the Lap Shear Specimen	53
3.4.3	Specimen for Determining the True Shear Properties of an Adhesive	55

3.4.4	The Goland-Reissner Analysis of the Lap Shear Specimen	56
3.5	Cleavage Loading of Adhesive Bonds	63
3.5.1	Cleavage or Fracture Specimens	63
3.5.1.1	Double Cantilever Beam Specimens	65
3.5.1.2	Linear Elastic Fracture Mechanics Applied to the Double Cantilever Beam Specimen	66
3.5.2	Blister Test	68
3.5.3	Compact Tension Test	68
3.5.4	Wedge Test	69
3.6	Peel Tests	70
3.6.1	Stress Analysis in a Peel Specimen	73
3.7	Summary	76
	Bibliography	76
	References	76
	Problems and Review Questions	77
4	The Basics of Intermolecular Forces and Surface Science	78
4.1	Introduction	78
4.2	Fundamental Forces	78
4.2.1	Electrostatic Forces	80
4.2.2	van der Waals Interactions	81
4.2.2.1	Dipole-Dipole Interactions	81
4.2.2.2	Dipole-Induced Dipole	83
4.2.2.3	Dispersion Forces	83
4.2.3	Interactions through Electron Pair Sharing	85
4.2.4	Repulsive Forces	86
4.3	Surface Forces and Surface Energy	86
4.4	Work of Cohesion and Adhesion	90
4.5	Methods of Measurement of Surface Energy and Related Parameters	92
4.5.1	Surface Tension	92
4.5.1.1	Drop Weight/Volume Method	93
4.5.1.2	du Nuoy Tensiometer	93
4.5.2	Surface Energy of Solids	94
4.5.2.1	Contact Angle Methods	94
4.5.2.2	Contact Mechanics and Direct Measurement of Solid Surface Energy	96
4.6	Surface Thermodynamics and Predictions of Surface and Interfacial Tensions	102
4.6.1	The Good-Girifalco Relationship	104
4.6.2	The Fowkes Hypothesis and Fractional Polarity	105
4.6.3	The Zisman Plot	107
4.6.4	Modern Application of Contact Angle Measurements	108
4.7	Modern Methods of Surface Analysis	109

4.7.1	Modern Methods for the Analysis of the Chemistry of Surfaces	112
4.7.2	Topological Methods of Surface Analysis.	112
4.8	Summary	114
	Bibliography.	114
	References	114
	Problems and Review Questions	116
5	Basic Physico/Chemical Properties of Polymers	118
5.1	Introduction	118
5.2	Basic Terminology	118
5.2.1	Monomers versus Polymers	118
5.2.2	Basic Types of Polymeric Materials.	119
5.2.3	Molecular Weight	120
5.3	Thermal Transitions of Polymers	122
5.3.1	Measurement of T_g	123
5.4	Dynamic Mechanical Measurements and Viscoelasticity	124
5.4.1	Methods of Measurement of Dynamic Mechanical Properties	124
5.4.2	Examples of Dynamic Mechanical Data for Polymers	126
5.5	Time-Temperature Superposition.	129
5.6	Summary	131
	Bibliography.	131
	References	131
6	The Relationship of Surface Science and Adhesion Science	132
6.1	Introduction.	132
6.2	Rationalizations of Adhesion Phenomena	132
6.3	Electrostatic Theory of Adhesion	133
6.4	Diffusion Theory of Adhesion	135
6.4.1	Diffusive Adhesive Bonding and Block Copolymers at Interfaces	138
6.5	Mechanical Interlocking and Adhesion.	141
6.5.1	Kinetics of Pore Penetration.	144
6.6	Wettability and Adhesion.	145
6.7	Acid-Base Interactions at Interfaces.	144
6.8	Covalent Bonding at Interfaces	151
6.8.1	Coupling Agents	153
6.9	The Relationship of Fundamental Forces of Adhesion and Practical Adhesion	155
6.10	The Weak Boundary Layer	159
6.11	Summary	160
	Bibliography.	161
	References	161
	Problems and Review Questions	162

7	The Surface Preparation of Adherends for Adhesive Bonding	164
7.1	Introduction	164
7.2	Plastic Surface Preparation	166
7.2.1	Corona Discharge Treatment	166
7.2.1.1	Corona Discharge Treatment of Polyethylene	168
7.2.1.2	Corona Discharge Treatment of Polypropylene	171
7.2.1.3	Corona Discharge Treatment of Poly(ethylene terephthalate)	171
7.2.1.4	Corona Discharge Treatment of Other Materials	173
7.2.2	Flame Treatment	174
7.2.3	Plasma Treatment	176
7.2.3.1	Plasma Treatment of PE	177
7.2.3.2	Plasma Treatment of Other Substrates	180
7.2.4	Other Physical Treatment Methods of Polymer Surfaces	180
7.2.4.1	Treatments Using Ultraviolet Radiation	180
7.2.4.2	Other Vacuum Methods of Surface Preparation	181
7.2.5	Wet Chemical Methods of Treatment of Polymer Surfaces	181
7.2.5.1	Single Surface Chemical Functionalization and Chromic Acid Treatment of PE	182
7.2.5.2	Wet Chemical Surface Treatment of Poly(tetrafluoroethylene)	183
7.2.6	Priming of Polymer Surfaces	184
7.2.6.1	Priming of Polyolefins for Cyanoacrylates	184
7.2.6.2	Chlorinated Polyolefins	184
7.3	Metal Surface Preparation	185
7.3.1	Surface Preparation of Aluminum for Adhesive Bonding	186
7.3.1.1	The Forest Products Laboratory (FPL) Etch	186
7.4	Anodization Treatments for Adhesive Bonding of Aluminum	190
7.4.1	Mechanism of Anodization	191
7.4.2	Anodization Media	191
7.4.3	Phosphoric Acid Anodization in the Aerospace Industry	193
7.5	General Techniques for the Surface Preparation of Metals	194
7.5.1	Conversion Coatings	194
7.5.2	Abrasion	195
7.5.3	Electrochemical Methods for Treating Metals other than Aluminum	196
7.6	Summary	197
	Bibliography	197
	References	197
	Problems and Review Questions	199
8	The Chemistry and Physical Properties of Structural Adhesives	201
8.1	Introduction to Chapters 8–10	201

8.2	Introduction to Structural Adhesives	201
8.2.1	Physical Forms of Uncured Structural Adhesives	202
8.3	Chemistry of Base Resins Used in Structural Adhesives	204
8.3.1	Phenolics	204
8.3.2	Proteins	206
8.3.3	Epoxy Resins	207
8.3.3.1	Time-Temperature-Transformation Diagrams and the Cure of Epoxy Resins	211
8.3.4	Urethane Resins	213
8.3.5	Acrylics	215
8.3.6	High Temperature Performance Structural Adhesives	217
8.4	Formulation of Structural Adhesives for Optimum Performance	220
8.4.1	Formulation of Phenolic Resins	221
8.4.2	Epoxy Resins	223
8.4.3	Acrylics	230
8.4.4	High Temperature Performance Structural Adhesives	232
8.5	Summary	234
	Bibliography	234
	References	234
	Problems and Review Questions	236
9	The Chemistry and Physical Properties of Elastomer-Based Adhesives	238
9.1	Introduction	238
9.2	Pressure-Sensitive Adhesives	238
9.2.1	Chemistry of the Base Resins Used in PSAs	239
9.2.2	Chemistry of Tackifiers	242
9.2.2.1	Natural Product Based Tackifiers	242
9.2.2.2	Petroleum-Based Tackifiers	243
9.2.2.3	Other Tackifiers	245
9.2.3	Testing of Pressure-Sensitive Adhesives	246
9.2.3.1	Measurements of Tack	246
9.2.3.2	Measurement of Peel	248
9.2.3.3	Measurement of Shear	249
9.2.4	Balance of Properties	250
9.2.5	PSA Performance Viewed as a Time Scale in Viscoelastic Response	251
9.2.6	PSA Viscoelasticity and Tack	251
9.2.7	PSA Peel and Viscoelasticity	255
9.2.8	Shear and Creep Behavior of PSAs	257
9.2.9	Summary	259
9.3	Rubber-Based, Contact Bond and Other Elastomeric Adhesives	259
9.3.1	Formulation of RBAs	260
9.3.2	Base Polymers	260

9.3.3	Tackifiers	262
9.3.4	Pigments and Fillers	262
9.3.5	Crosslinking/Vulcanization of RBAs	263
9.3.6	Solvents	264
9.3.7	Elastomeric Adhesives, Sealants, and Realease Coatings Based upon Silicone Chemistry	265
9.4	Summary	266
	Bibliography	268
	References	268
	Problems and Review Questions	268
10	Thermoplastic, Pseudothermoplastic, and Other Adhesives	270
10.1	Introduction	270
10.2	Hot Melt Adhesives	270
10.2.1	Introduction	270
10.2.2	Polymer Physical Properties and Hot Melt Adhesives	271
10.2.3	Formulation of Hot Melt Adhesives	273
10.2.4	Synthetically Designed Hot Melt Adhesives	277
10.2.5	Curing Hot Melts	280
10.3	Polyvinyl Acetate-Based Adhesives	282
10.4	Polyvinyl Acetal Adhesives	282
10.5	Thermoplastic or Pseudo-Thermoplastic Adhesives Based upon Natural Products	283
10.5.1	Starches	283
10.5.2	Cellulosics	284
10.6	Summary	285
	Bibliography	285
	References	285
11	The Basis for Adhesive Bond Design	286
11.1	Introduction	286
11.2	Chemistry and Mechanical Properties of Adhesives	286
11.3	Application Criteria	289
11.4	Interfaces and Surface Preparations	292
11.5	Miscellaneous Concerns	293
11.6	Basic Criteria for the Design of an Adhesive Bond	294
11.6.1	Hart-Smith Design Criteria for Double Lap Joints	296
11.7	Summary	299
	References	299
	Problems and Review Questions	300
	Answer Key	301
	Index	313
