

HANDBOOK OF OPTICAL COMPONENTS AND ENGINEERING

EDITED BY
KAI CHANG

CONTENTS

Preface

xv

Contributors

xvii

1. Optical Wave Propagation

1

Andrew K. Chan

- 1.1 Introduction and Organization of the Chapter 1
- 1.2 Electromagnetic Wave Propagation 2
- 1.3 Geometrical Optics 15
- 1.4 Propagation of Gaussian Beam 29
- 1.5 Diffraction 40
- References 51

2. Infrared Techniques

53

Asu R. Jha and Peter N. Kupferman

- 2.1 Introduction 53
- 2.2 Definition of the Infrared 54
- 2.3 History of Infrared Detectors 54
- 2.4 Device Physics 58
- 2.5 Mercury Cadmium Telluride 70
- 2.6 Indium Antimonide 86
- 2.7 Schottky-Barrier Detectors 91
- 2.8 Sprite Detectors 96
- 2.9 Pyroelectric Detectors 103
- 2.10 Extrinsic Silicon 107
- 2.11 Systems Analysis 109
- References 113

3. Optical Lenses 115*John R. Rogers*

- 3.1 Introduction 115
- 3.2 First-Order Optics 118
- 3.3 Aberrations 134
- 3.4 Real Ray-Trace Techniques 151
- 3.5 Diffraction Effects 155
- 3.6 Modular Optical Design 160
 - References 162
 - Bibliography 162

4. Optical Resonators 163*Kenichi Iga*

- 4.1 Introduction 163
- 4.2 Waveguide-Type Fabry–Perot Resonators 164
- 4.3 Gaussian Beams and Propagation Matrices 171
- 4.4 Fabry–Perot Open Resonators with Concave Mirrors 176
- 4.5 Distributed Feedback/Reflector Resonators 188
- 4.6 Resonator for Vertical Cavity Surface Emitting Laser 195
- 4.7 Summary 196
 - References 196

5. Spatial Filters and Fourier Optics 199*Francis T. S. Yu*

- 5.1 Introduction 199
- 5.2 Fresnel–Kirchhoff Theory and System Transforms 199
- 5.3 Analysis of Coherent and Incoherent Optical Systems 205
- 5.4 Coherent Optical Processing 210
- 5.5 Complex Spatial Filter Synthesis 212
- 5.6 Partially Coherent Optical Processing 215
- 5.7 White Light Optical Processing 218
- 5.8 Spatial Encoding and Image Sampling 220
- 5.9 Real-Time Optical Processing 222
- 5.10 Adaptive Processing 228
- 5.11 Large-Capacity Information Processing 229
- 5.12 Optical Neural Networks 232
- 5.13 Fundamental Approaches 234
- 5.14 Concluding Remark 236
 - References 236

6. Semiconductor Lasers 239

Jane J. Yang and Bing W. Liang

- 6.1 Introduction 239
- 6.2 Applications 240
- 6.3 Basic Operation 241
- 6.4 Concepts of High-Power Operation 271
- 6.5 Surface-Emitting Semiconductor Lasers 290
- 6.6 Semiconductor Tunable Laser Diodes 292
- 6.7 High-Speed Semiconductor Lasers 308
- 6.8 Vertical-Cavity Surface-Emitting Lasers (VCSELs) 323
- 6.9 Other Quantum Devices: Quantum Cascade, Quantum Wire,
and Quantum DOT Lasers 347
- 6.10 Conclusion 350
- References 352

7. Solid-State Lasers 369

John M. McMahon

- 7.1 Introduction 369
- 7.2 Excitation of Solid-State Lasers 375
- 7.3 Laser Oscillators 386
- 7.4 Laser Amplifiers 399
- 7.5 Optical Modulators 412
- 7.6 System Strategies for Oscillator–Amplifier Laser
Systems 419
- 7.7 Average Power Effects 424
- 7.8 Miscellaneous Topics 428
- References 437

8. Liquid Lasers 443

B. Wilhelmi, E. Döpel, and F. Weidner

- 8.1 Introduction 443
- 8.2 Parameters of the Active Media: Comparison with Other
Lasers 446
- 8.3 Excitation of the Active Medium, Frequency Selection, and
Tuning 460
- 8.4 Operational Principles, Design, and Parameters of Liquid
Lasers 471
- 8.5 Selected Applications 496
- Bibliography 501
- References 502

9. Gas Lasers	511
<i>T. Lehecka, N. C. Luhmann, Jr., W. A. Peebles, J. Goldhar, and S. P. Obenschain</i>	
9.1 Introduction	511
9.2 Far-Infrared Lasers	541
9.3 Excimer Lasers	624
References	647
10. Optical Fiber Transmission Technology	659
<i>Chinlon Lin</i>	
10.1 Introduction	659
10.2 Optical Fibers for Transmission	660
10.3 Optical Fiber Transmission Technology	679
10.4 Transmission Limitations	686
10.5 Future Directions in Optical Transmission Technology	691
10.6 Future Applications: Fiber to the Home and Intelligent Buildings	692
References	694
11. Optical Channel Waveguides and Waveguide Couplers	697
<i>Talal K. Findakly</i>	
11.1 Optical Planar Waveguides	697
11.2 Optical Channel Waveguides	702
11.3 Optical Directional Couplers	707
References	716
12. Planar Optical Waveguides and Applications	719
<i>Shi-Kay Yao</i>	
12.1 Planar Optical Waveguides	720
12.2 Passive Waveguide Optical Components	753
12.3 Waveguide Measurement Techniques and Applications	809
References	830
13. Optical Attenuators, Isolators, Circulators, and Polarizers	837
<i>Feng Qing Zhou and J. J. Pan</i>	
13.1 Introduction	837
13.2 Optical Polarizers	838
13.3 Polarization Rotators and Phase Retarders	846

13.4 Optical Attenuators	850
13.5 Optical Isolators	863
13.6 Optical Circulators	874
References	884

14. Optical Filters for Telecommunication Applications **887**

C. K. Madsen

14.1 Introduction	887
14.2 Optical Filter Theory	890
14.3 Finite Impulse Response Optical Filters	898
14.4 Infinite Impulse Response Optical Filters	913
14.5 Thin Film Filters	917
14.6 Bragg Gratings	921
14.7 Conclusion	925
References	925

15. Wavelength Division Multiplexers and Demultiplexers **935**

José Capmany and Salvador Sales

15.1 Introduction	935
15.2 General Issues on WDM MUX/DEMUX and OADM Devices	936
15.3 Thin-Film MUX/DEMUX Devices	954
15.4 Free-Space MUX/DEMUX Devices	961
15.5 Optical Fiber-Based MUX/DEMUX Devices	970
15.6 Integrated Optics-Based MUX/DEMUX Devices	979
15.7 Epilogue	998
References	998

16. Wide-Bandwidth Optical Intensity Modulators **1009**

G. L. Li and P. K. L. Yu

16.1 Introduction	1009
16.2 Physical Effects and Modulator Materials	1010
16.3 Modulation Efficiency and Modulator Waveguide Design	1027
16.4 Lumped-Element Modulators	1041
16.5 Traveling-Wave Modulators	1050
16.6 A Comparison of the Available Modulators	1069
References	1072

17. Optical Modulation: Acousto-Optical Devices **1079**

Chen S. Tsai

- 17.1 Introduction 1079
- 17.2 Bulk-Wave Acousto-Optical Bragg Diffraction and Applications 1080
- 17.3 Guided-Wave Acousto-Optical Bragg Diffraction in Planar Waveguides 1084
- 17.4 Key Performance Parameters of Planar Guided-Wave Acousto-Optical Bragg Modulator and Deflector 1099
- 17.5 Construction of Wide-Band Guided-Wave Acousto-Optical Bragg Modulators and Deflectors 1102
- 17.6 Applications of Guided-Wave Acousto-Optical Bragg Cells and Modules 1111
- References 1121

18. Optical Modulation: Magneto-Optical Devices **1131**

Alan E. Craig

- 18.1 Introduction 1131
- 18.2 Units 1132
- 18.3 Material Physics of Magnetism 1135
- 18.4 Spin Waves 1149
- 18.5 Material Physics of Optics 1160
- 18.6 Magneto-Optics 1164
- 18.7 Real Materials 1169
- 18.8 Modern Magneto-Optical Devices 1187
- References 1207
- Suggestions for Further Reading 1211

19. Optical Detectors **1215**

P. K. L. Yu and H. D. Law

- 19.1 Introduction 1215
- 19.2 Terminology in Optical Detection and Material Considerations 1216
- 19.3 Photodiodes 1220
- 19.4 Photoconductive Devices 1239
- 19.5 Nonlinearity in Photodetectors 1243
- References 1249

20. Acousto-Optic Modulators and Switches **1255***Shi-Kay Yao*

20.1 Introduction 1255

20.2 Basic Properties of Acousto-Optic Modulators 1257

20.3 Design Procedures of Acousto-Optic Modulators 1277

20.4 Fabrication of Acousto-Optic Modulators 1287

20.5 Summary 1296

References 1298

21. Optical Amplifiers **1301***Chin B. Su*

21.1 Erbium-Doped Fiber Amplifier 1301

21.2 Raman Fiber Amplifier 1312

21.3 Semiconductor Optical Amplifier 1316

References 1320

Index **1321**
