CAMBRIDGE MONOGRAPHS  
ON MATHEMATICAL PHYSICS

# Contents

<b>Preface</b>	<b>xix</b>
<b>List of tables</b>	<b>xxiii</b>
<b>Notation</b>	<b>xxvii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 What are exact solutions, and why study them?	1
1.2 The development of the subject	3
1.3 The contents and arrangement of this book	4
1.4 Using this book as a catalogue	7
<b>Part 1: General methods</b>	<b>9</b>
<b>2 Differential geometry without a metric</b>	<b>9</b>
2.1 Introduction	9
2.2 Differentiable manifolds	10
2.3 Tangent vectors	12
2.4 One-forms	13
2.5 Tensors	15
2.6 Exterior products and $p$ -forms	17
2.7 The exterior derivative	18
2.8 The Lie derivative	21
2.9 The covariant derivative	23
2.10 The curvature tensor	25
2.11 Fibre bundles	27

<b>3</b>	<b>Some topics in Riemannian geometry</b>	<b>30</b>
3.1	Introduction	30
3.2	The metric tensor and tetrads	30
3.3	Calculation of curvature from the metric	34
3.4	Bivectors	35
3.5	Decomposition of the curvature tensor	37
3.6	Spinors	40
3.7	Conformal transformations	43
3.8	Discontinuities and junction conditions	45
<b>4</b>	<b>The Petrov classification</b>	<b>48</b>
4.1	The eigenvalue problem	48
4.2	The Petrov types	49
4.3	Principal null directions and determination of the Petrov types	53
<b>5</b>	<b>Classification of the Ricci tensor and the energy-momentum tensor</b>	<b>57</b>
5.1	The algebraic types of the Ricci tensor	57
5.2	The energy-momentum tensor	60
5.3	The energy conditions	63
5.4	The Rainich conditions	64
5.5	Perfect fluids	65
<b>6</b>	<b>Vector fields</b>	<b>68</b>
6.1	Vector fields and their invariant classification	68
6.1.1	Timelike unit vector fields	70
6.1.2	Geodesic null vector fields	70
6.2	Vector fields and the curvature tensor	72
6.2.1	Timelike unit vector fields	72
6.2.2	Null vector fields	74
<b>7</b>	<b>The Newman Penrose and related formalisms</b>	<b>75</b>
7.1	The spin coefficients and their transformation laws	75
7.2	The Ricci equations	78
7.3	The Bianchi identities	81
7.4	The GHP calculus	84
7.5	Geodesic null congruences	86
7.6	The Goldberg Sachs theorem and its generalizations	87

<b>8</b>	<b>Continuous groups of transformations; isometry and homothety groups</b>	<b>91</b>
8.1	Lie groups and Lie algebras	91
8.2	Enumeration of distinct group structures	95
8.3	Transformation groups	97
8.4	Groups of motions	98
8.5	Spaces of constant curvature	101
8.6	Orbits of isometry groups	101
8.6.1	Simply-transitive groups	103
8.6.2	Multiply-transitive groups	106
8.7	Homothety groups	110
<b>9</b>	<b>Invariants and the characterization of geometries</b>	<b>112</b>
9.1	Scalar invariants and covariants	113
9.2	The Cartan equivalence method for space-times	116
9.3	Calculating the Cartan scalars	120
9.3.1	Determination of the Petrov and Segre types	120
9.3.2	The remaining steps	124
9.4	Extensions and applications of the Cartan method	125
9.5	Limits of families of space-times	126
<b>10</b>	<b>Generation techniques</b>	<b>129</b>
10.1	Introduction	129
10.2	Lie symmetries of Einstein's equations	129
10.2.1	Point transformations and their generators	129
10.2.2	How to find the Lie point symmetries of a given differential equation	131
10.2.3	How to use Lie point symmetries: similarity reduction	132
10.3	Symmetries more general than Lie symmetries	134
10.3.1	Contact and Lie Bäcklund symmetries	134
10.3.2	Generalized and potential symmetries	134
10.4	Prolongation	137
10.4.1	Integral manifolds of differential forms	137
10.4.2	Isovectors, similarity solutions and conservation laws	140
10.4.3	Prolongation structures	141
10.5	Solutions of the linearized equations	145
10.6	Bäcklund transformations	146
10.7	Riemann-Hilbert problems	148
10.8	Harmonic maps	148
10.9	Variational Bäcklund transformations	151
10.10	Hirota's method	152

10.11	Generation methods including perfect fluids	152
10.11.1	Methods using the existence of Killing vectors	152
10.11.2	Conformal transformations	155
<b>Part II: Solutions with groups of motions</b>		157
<b>11</b>	<b>Classification of solutions with isometries or homotheties</b>	<b>157</b>
11.1	The possible space-times with isometries	157
11.2	Isotropy and the curvature tensor	159
11.3	The possible space-times with proper homothetic motions	162
11.4	<i>Summary of solutions with homotheties</i>	167
<b>12</b>	<b>Homogeneous space-times</b>	<b>171</b>
12.1	The possible metrics	171
12.2	Homogeneous vacuum and null Einstein Maxwell space-times	174
12.3	Homogeneous non-null electromagnetic fields	175
12.4	Homogeneous perfect fluid solutions	177
12.5	Other homogeneous solutions	180
12.6	Summary	181
<b>13</b>	<b>Hypersurface-homogeneous space-times</b>	<b>183</b>
13.1	The possible metrics	183
13.1.1	Metrics with a $G_6$ on $V_3$	183
13.1.2	Metrics with a $G_4$ on $V_3$	183
13.1.3	Metrics with a $G_3$ on $V_3$	187
13.2	Formulations of the field equations	188
13.3	Vacuum, A-term and Einstein Maxwell solutions	191
13.3.1	Solutions with multiply-transitive groups	194
13.3.2	Vacuum spaces with a $G_3$ on $V_3$	196
13.3.3	Einstein spaces with a $G_3$ on $V_3$	199
13.3.4	Einstein Maxwell solutions with a $G_3$ on $V_3$	201
13.4	Perfect fluid solutions homogeneous on $V_3$	204
13.5	Summary of all metrics with $G_r$ on $V_3$	207
<b>14</b>	<b>Spatially-homogeneous perfect fluid cosmologies</b>	<b>210</b>
14.1	Introduction	210
14.2	Robertson Walker cosmologies	211
14.3	Cosmologies with a $G_4$ on $S_3$	214
14.4	Cosmologies with a $G_3$ on $S_3$	218

<b>15 Groups <math>G_3</math> on non-null orbits <math>V_2</math>. Spherical and plane symmetry</b>	<b>226</b>
15.1 Metric, Killing vectors, and Ricci tensor	226
15.2 Some implications of the existence of an isotropy group $I_1$	228
15.3 Spherical and plane symmetry	229
15.4 Vacuum, Einstein Maxwell and pure radiation fields	230
15.4.1 Timelike orbits	230
15.4.2 Spacelike orbits	231
15.4.3 Generalized Birkhoff theorem	232
15.4.4 Spherically- and plane-symmetric fields	233
15.5 Dust solutions	235
15.6 Perfect fluid solutions with plane, spherical or pseudospherical symmetry	237
15.6.1 Some basic properties	237
15.6.2 Static solutions	238
15.6.3 Solutions without shear and expansion	238
15.6.4 Expanding solutions without shear	239
15.6.5 Solutions with nonvanishing shear	240
15.7 Plane-symmetric perfect fluid solutions	243
15.7.1 Static solutions	243
15.7.2 Non-static solutions	244
<b>16 Spherically-symmetric perfect fluid solutions</b>	<b>247</b>
16.1 Static solutions	247
16.1.1 Field equations and first integrals	247
16.1.2 Solutions	250
16.2 Non-static solutions	251
16.2.1 The basic equations	251
16.2.2 Expanding solutions without shear	253
16.2.3 Solutions with non-vanishing shear	260
<b>17 Groups <math>G_2</math> and <math>G_1</math> on non-null orbits</b>	<b>264</b>
17.1 Groups $G_2$ on non-null orbits	264
17.1.1 Subdivisions of the groups $G_2$	264
17.1.2 Groups $G_2I$ on non-null orbits	265
17.1.3 $G_2II$ on non-null orbits	267
17.2 Boost-rotation-symmetric space-times	268
17.3 Group $G_1$ on non-null orbits	271
<b>18 Stationary gravitational fields</b>	<b>275</b>
18.1 The projection formalism	275

18.2	The Ricci tensor on $\Sigma_3$	277
18.3	Conformal transformation of $\Sigma_3$ and the field equations	278
18.4	Vacuum and Einstein–Maxwell equations for stationary fields	279
18.5	Geodesic eigenrays	281
18.6	Static fields	283
18.6.1	Definitions	283
18.6.2	Vacuum solutions	284
18.6.3	Electrostatic and magnetostatic Einstein–Maxwell fields	284
18.6.4	Perfect fluid solutions	286
18.7	The conformastationary solutions	287
18.7.1	Conformastationary vacuum solutions	287
18.7.2	Conformastationary Einstein–Maxwell fields	288
18.8	Multipole moments	289
<b>19</b>	<b>Stationary axisymmetric fields: basic concepts and field equations</b>	<b>292</b>
19.1	The Killing vectors	292
19.2	Orthogonal surfaces	293
19.3	The metric and the projection formalism	296
19.4	The field equations for stationary axisymmetric Einstein–Maxwell fields	298
19.5	Various forms of the field equations for stationary axisymmetric vacuum fields	299
19.6	Field equations for rotating fluids	302
<b>20</b>	<b>Stationary axisymmetric vacuum solutions</b>	<b>304</b>
20.1	Introduction	304
20.2	Static axisymmetric vacuum solutions (Weyl's class)	304
20.3	The class of solutions $U = U(\omega)$ (Papapetrou's class)	309
20.4	The class of solutions $S = S(A)$	310
20.5	The Kerr solution and the Tomimatsu–Sato class	311
20.6	Other solutions	313
20.7	Solutions with factor structure	316
<b>21</b>	<b>Non-empty stationary axisymmetric solutions</b>	<b>319</b>
21.1	Einstein–Maxwell fields	319
21.1.1	Electrostatic and magnetostatic solutions	319
21.1.2	Type D solutions: A general metric and its limits	322
21.1.3	The Kerr–Newman solution	325

21.1.4	Complexification and the Newman-Janis ‘complex trick’	328
21.1.5	Other solutions	329
21.2	Perfect fluid solutions	330
21.2.1	Line element and general properties	330
21.2.2	The general dust solution	331
21.2.3	Rigidly rotating perfect fluid solutions	333
21.2.4	Perfect fluid solutions with differential rotation	337
<b>22</b>	<b>Groups <math>G_2I</math> on spacelike orbits: cylindrical symmetry</b>	<b>341</b>
22.1	General remarks	341
22.2	Stationary cylindrically-symmetric fields	342
22.3	Vacuum fields	350
22.4	Einstein-Maxwell and pure radiation fields	351
<b>23</b>	<b>Inhomogeneous perfect fluid solutions with symmetry</b>	<b>358</b>
23.1	Solutions with a maximal $H_3$ on $S_3$	359
23.2	Solutions with a maximal $H_3$ on $T_3$	361
23.3	Solutions with a $G_2$ on $S_2$	362
23.3.1	Diagonal metrics	363
23.3.2	Non-diagonal solutions with orthogonal transitivity	372
23.3.3	Solutions without orthogonal transitivity	373
23.4	Solutions with a $G_1$ or a $H_2$	374
<b>24</b>	<b>Groups on null orbits. Plane waves</b>	<b>375</b>
24.1	Introduction	375
24.2	Groups $G_3$ on $N_3$	376
24.3	Groups $G_2$ on $N_2$	377
24.4	Null Killing vectors ( $G_1$ on $N_1$ )	379
24.4.1	Non-twisting null Killing vector	380
24.4.2	Twisting null Killing vector	382
24.5	The plane-fronted gravitational waves with parallel rays ( $pp$ -waves)	383
<b>25</b>	<b>Collision of plane waves</b>	<b>387</b>
25.1	General features of the collision problem	387
25.2	The vacuum field equations	389
25.3	Vacuum solutions with collinear polarization	392
25.4	Vacuum solutions with non-collinear polarization	394
25.5	Einstein-Maxwell fields	397

25.6	Stiff perfect fluids and pure radiation	403
25.6.1	Stiff perfect fluids	403
25.6.2	Pure radiation (null dust)	405
<b>Part III: Algebraically special solutions</b>		407
<b>26</b>	<b>The various classes of algebraically special solutions. Some algebraically general solutions</b>	<b>407</b>
26.1	Solutions of Petrov type <i>II</i> , <i>D</i> , <i>III</i> or <i>N</i>	407
26.2	Petrov type <i>D</i> solutions	412
26.3	Conformally flat solutions	413
26.4	Algebraically general vacuum solutions with geodesic and non-twisting rays	413
<b>27</b>	<b>The line element for metrics with <math>\kappa = \sigma = 0 = R_{11} = R_{14} = R_{44}</math>, <math>\Theta + i\omega \neq 0</math></b>	<b>416</b>
27.1	The line element in the case with twisting rays ( $\omega \neq 0$ )	416
27.1.1	The choice of the null tetrad	416
27.1.2	The coordinate frame	418
27.1.3	Admissible tetrad and coordinate transformations	420
27.2	The line element in the case with non-twisting rays ( $\omega = 0$ )	420
<b>28</b>	<b>Robinson–Trautman solutions</b>	<b>422</b>
28.1	Robinson–Trautman vacuum solutions	422
28.1.1	The field equations and their solutions	422
28.1.2	Special cases and explicit solutions	424
28.2	Robinson–Trautman Einstein–Maxwell fields	427
28.2.1	Line element and field equations	427
28.2.2	Solutions of type <i>III</i> , <i>N</i> and <i>O</i>	429
28.2.3	Solutions of type <i>D</i>	429
28.2.4	Type <i>II</i> solutions	431
28.3	Robinson–Trautman pure radiation fields	435
28.4	Robinson–Trautman solutions with a cosmological constant $\Lambda$	436
<b>29</b>	<b>Twisting vacuum solutions</b>	<b>437</b>
29.1	Twisting vacuum solutions – the field equations	437
29.1.1	The structure of the field equations	437
29.1.2	The integration of the main equations	438
29.1.3	The remaining field equations	440
29.1.4	Coordinate freedom and transformation properties	441

<b>29.2</b>	<b>Some general classes of solutions</b>	<b>442</b>
29.2.1	Characterization of the known classes of solutions	442
29.2.2	The case $\partial_\zeta I = \partial_\zeta(G^2 + \partial_\zeta \overline{G}) \neq 0$	445
29.2.3	The case $\partial_\zeta I = \partial_\zeta(\overline{G}^2 - \partial_\zeta \overline{G}) \neq 0$ , $I_{,\zeta} = 0$	446
29.2.4	The case $I = 0$	447
29.2.5	The case $I = 0 = L_{,\zeta}$	449
29.2.6	Solutions independent of $\zeta$ and $\overline{\zeta}$	450
<b>29.3</b>	<b>Solutions of type <math>N</math> (<math>\Psi_2 = 0 = \Psi_3</math>)</b>	<b>451</b>
<b>29.4</b>	<b>Solutions of type <math>III</math> (<math>\Psi_2 = 0</math>, <math>\Psi_3 \neq 0</math>)</b>	<b>452</b>
<b>29.5</b>	<b>Solutions of type <math>D</math> (<math>\beta\Psi_2\Psi_1 = 2\Psi_3^2</math>, <math>\Psi_2 \neq 0</math>)</b>	<b>452</b>
<b>29.6</b>	<b>Solutions of type <math>II</math></b>	<b>454</b>
<b>30</b>	<b>Twisting Einstein Maxwell and pure radiation fields</b>	<b>455</b>
30.1	The structure of the Einstein Maxwell field equations	455
30.2	Determination of the radial dependence of the metric and the Maxwell field	456
30.3	The remaining field equations	458
30.4	Charged vacuum metrics	459
30.5	A class of radiative Einstein Maxwell fields ( $\Phi_2^0 \neq 0$ )	460
30.6	Remarks concerning solutions of the different Petrov types	461
30.7	Pure radiation fields	463
30.7.1	The field equations	463
30.7.2	Generating pure radiation fields from vacuum by changing $P$	464
30.7.3	Generating pure radiation fields from vacuum by changing $m$	466
30.7.4	Some special classes of pure radiation fields	467
<b>31</b>	<b>Non-diverging solutions (Kundt's class)</b>	<b>470</b>
31.1	Introduction	470
31.2	The line element for metrics with $\Theta + i\omega = 0$	470
31.3	The Ricci tensor components	472
31.4	The structure of the vacuum and Einstein Maxwell equation	473
31.5	Vacuum solutions	476
31.5.1	Solutions of types $III$ and $N$	476
31.5.2	Solutions of types $D$ and $II$	478
31.6	Einstein Maxwell null fields and pure radiation fields	480
31.7	Einstein-Maxwell non-null fields	481
31.8	Solutions including a cosmological constant $\Lambda$	483

<b>32</b>	<b>Kerr–Schild metrics</b>	<b>485</b>
32.1	General properties of Kerr–Schild metrics	485
32.1.1	The origin of the Kerr–Schild–Trautman ansatz	485
32.1.2	The Ricci tensor, Riemann tensor and Petrov type	485
32.1.3	Field equations and the energy-momentum tensor	487
32.1.4	A geometrical interpretation of the Kerr–Schild ansatz	487
32.1.5	The Newman–Penrose formalism for shearfree and geodesic Kerr–Schild metrics	489
32.2	Kerr–Schild vacuum fields	492
32.2.1	The case $\rho = -(\Theta + i\omega) \neq 0$	492
32.2.2	The case $\rho = -(\Theta + i\omega) = 0$	493
32.3	Kerr–Schild Einstein–Maxwell fields	493
32.3.1	The case $\rho = -(\Theta - i\omega) \neq 0$	493
32.3.2	The case $\rho = -(\Theta - i\omega) = 0$	495
32.4	Kerr–Schild pure radiation fields	497
32.4.1	The case $\rho \neq 0, \sigma = 0$	497
32.4.2	The case $\sigma \neq 0$	499
32.4.3	The case $\rho \neq 0, \sigma \neq 0$	499
32.5	Generalizations of the Kerr–Schild ansatz	499
32.5.1	General properties and results	499
32.5.2	Non-flat vacuum to vacuum	501
32.5.3	Vacuum to electrovac	502
32.5.4	Perfect fluid to perfect fluid	503
<b>33</b>	<b>Algebraically special perfect fluid solutions</b>	<b>506</b>
33.1	Generalized Robinson–Trautman solutions	506
33.2	Solutions with a geodesic, shearfree, non-expanding multiple null eigenvector	510
33.3	Type <i>D</i> solutions	512
33.3.1	Solutions with $\kappa = \nu = 0$	513
33.3.2	Solutions with $\kappa \neq 0, \nu \neq 0$	513
33.4	Type <i>III</i> and type <i>N</i> solutions	513
<b>Part IV: Special methods</b>		<b>518</b>
<b>34</b>	<b>Application of generation techniques to general relativity</b>	<b>518</b>
34.1	Methods using harmonic maps (potential space symmetries)	518
34.1.1	Electrovacuum fields with one Killing vector	518
34.1.2	The group $SU(2,1)$	521

34.1.3	Complex invariance transformations	525
34.1.4	Stationary axisymmetric vacuum fields	526
34.2	Prolongation structure for the Ercust equation	529
34.3	The linearized equations, the Kinnersley Chitre B group and the Hoenselaers Kinnersley Xanthopoulos transformations	532
34.3.1	The field equations	532
34.3.2	Infinitesimal transformations and transformations preserving Minkowski space	534
34.3.3	The Hoenselaers Kinnersley Xanthopoulos transformation	535
34.4	Bäcklund transformations	538
34.5	The Belinski-Zakharov technique	543
34.6	The Riemann-Hilbert problem	547
34.6.1	Some general remarks	547
34.6.2	The Neugebauer Meinel rotating disc solution	548
34.7	Other approaches	549
34.8	Einstein-Maxwell fields	550
34.9	The case of two space-like Killing vectors	550
<b>35</b>	<b>Special vector and tensor fields</b>	<b>553</b>
35.1	Space-times that admit constant vector and tensor fields	553
35.1.1	Constant vector fields	553
35.1.2	Constant tensor fields	554
35.2	Complex recurrent, conformally recurrent, recurrent and symmetric spaces	556
35.2.1	The definitions	556
35.2.2	Space-times of Petrov type D	557
35.2.3	Space-times of type N	557
35.2.4	Space-times of type O	558
35.3	Killing tensors of order two and Killing-Yano tensors	559
35.3.1	The basic definitions	559
35.3.2	First integrals, separability and Killing or Killing-Yano tensors	560
35.3.3	Theorems on Killing and Killing-Yano tensors in four-dimensional space-times	561
35.4	Collineations and conformal motions	564
35.4.1	The basic definitions	564
35.4.2	Proper curvature collineations	565
35.4.3	General theorems on conformal motions	565
35.4.4	Non-conformally flat solutions admitting proper conformal motions	567

<b>36</b>	<b>Solutions with special subspaces</b>	<b>571</b>
36.1	The basic formulae	571
36.2	Solutions with flat three-dimensional slices	573
36.2.1	Vacuum solutions	573
36.2.2	Perfect fluid and dust solutions	573
36.3	Perfect fluid solutions with conformally flat slices	577
36.4	Solutions with other intrinsic symmetries	579
<b>37</b>	<b>Local isometric embedding of four-dimensional Riemannian manifolds</b>	<b>580</b>
37.1	The why of embedding	580
37.2	The basic formulae governing embedding	581
37.3	Some theorems on local isometric embedding	583
37.3.1	General theorems	583
37.3.2	Vector and tensor fields and embedding class	584
37.3.3	Groups of motions and embedding class	586
37.4	Exact solutions of embedding class one	587
37.4.1	The Gauss and Codazzi equations and the possible types of $\Omega_{ab}$	587
37.4.2	Conformally flat perfect fluid solutions of embedding class one	588
37.4.3	Type D perfect fluid solutions of embedding class one	591
37.4.4	Pure radiation field solutions of embedding class one	594
37.5	Exact solutions of embedding class two	596
37.5.1	The Gauss–Codazzi–Ricci equations	596
37.5.2	Vacuum solutions of embedding class two	598
37.5.3	Conformally flat solutions	599
37.6	Exact solutions of embedding class $p > 2$	603
<b>Part V: Tables</b>		<b>605</b>
<b>38</b>	<b>The interconnections between the main classification schemes</b>	<b>605</b>
38.1	Introduction	605
38.2	The connection between Petrov types and groups of motions	606
38.3	Tables	609
