

EVOLUTIONARY ANALYSIS

SCOTT FREEMAN

JON C. HERRON

THIRD EDITION

Contents

Preface	xi	1.5	Where Did HIV Come From?	24
			<i>Box 1.2 When did HIV move from chimpanzees to humans?</i>	28
			Summary 29 • Questions 30	
			Exploring the Literature 31 • Citations 31	
PART 1				
INTRODUCTION	1			
CHAPTER 1			CHAPTER 2	
A Case for Evolutionary Thinking: Understanding HIV	3		The Evidence for Evolution	35
1.1 The Natural History of the HIV/AIDS Epidemic	4	2.1	Evidence of Change through Time	36
1.2 Why Does AZT Work in the Short Run, But Fail in the Long Run?	10		<i>Box 2.1 A brief history of ideas on evolution</i>	37
<i>Box 1.1 Can understanding how resistance evolves help researchers design better treatments?</i>	14	2.2	Evidence of Common Ancestry	47
1.3 Why is HIV Fatal?	17		<i>Box 2.2 Homology and model organisms</i>	56
1.4 Why Are Some People Resistant to Infection by HIV?	22	2.3	The Age of Earth	57
			<i>Box 2.3 A closer look at radiometric dating</i>	61
		2.4	Is There Necessarily a Conflict between Evolutionary Biology and Religion?	62
			Summary 64 • Questions 65	
			Exploring the Literature 66 • Citations 67	
			CHAPTER 3	
			Darwinian Natural Selection	69
		3.1	Artificial Selection: Domestic Animals and Plants	70
		3.2	Evolution by Natural Selection	72
		3.3	The Evolution of Flower Color in an Experimental Snapdragon Population	74
		3.4	The Evolution of Beak Shape in Galápagos Finches	76
			<i>Box 3.1 Issues that complicate how heritabilities are estimated</i>	82
		3.5	The Nature of Natural Selection	87
		3.6	The Evolution of Darwinism	92
		3.7	The Debate over “Scientific Creationism” and Intelligent Design Theory	95
			Summary 104 • Questions 104	
			Exploring the Literature 105 • Citations 105	

PART 2

MECHANISMS OF EVOLUTIONARY CHANGE

107

CHAPTER 4

Mutation and Genetic Variation 109

- 4.1 Where New Alleles Come From 109
- 4.2 Where New Genes Come From 120
- 4.3 Chromosome Alterations 123
- 4.4 Measuring Genetic Variation in Natural Populations 127
 - Box 4.1* Gel electrophoresis 132
 - Summary 137 • Questions 137
 - Exploring the Literature 138 • Citations 139

CHAPTER 5

Mendelian Genetics in Populations I: Selection and Mutation as Mechanisms of Evolution 141

- 5.1 Mendelian Genetics in Populations: The Hardy–Weinberg Equilibrium Principle 142
 - Box 5.1* Combining probabilities 147
 - Box 5.2* The Hardy–Weinberg equilibrium principle with more than two alleles 152

- 5.2 Selection 154
 - Box 5.3* A general treatment of selection 159
 - Box 5.4* Hardy–Weinberg equilibrium among different mutant alleles that cause a recessive genetic disease 162
 - Box 5.5* Statistical analysis of allele and genotype frequencies using the χ^2 (chi-square) test 164
 - Box 5.6* Predicting the frequency of the CCR5- Δ 32 allele in future generations 166
- 5.3 Patterns of Selection: Testing Predictions of Population Genetic Theory 166
 - Box 5.7* An algebraic treatment of selection on recessive and dominant alleles 170
 - Box 5.8* Stable equilibria with heterozygote superiority and unstable equilibria with heterozygote inferiority 174
- 5.4 Mutation 182
 - Box 5.9* A mathematical treatment of mutation as an evolutionary force 184
 - Box 5.10* Allele frequencies under mutation–selection balance 187
 - Box 5.11* Estimating mutation rates for recessive alleles 188
 - Summary 190 • Questions 191
 - Exploring the Literature 192 • Citations 193

CHAPTER 6

Mendelian Genetics in Populations II: Migration, Genetic Drift, and Nonrandom Mating 195

- 6.1 Migration 197
 - Box 6.1* An algebraic treatment of migration as an evolutionary force 199
 - Box 6.2* Selection and migration in Lake Erie water snakes 201
- 6.2 Genetic Drift 204
 - Box 6.3* The probability that a given allele will be the one that drifts to fixation 213
 - Box 6.4* Effective population size 217
 - Box 6.5* The rate of evolutionary substitution under genetic drift 222
- 6.3 Genetic Drift and Molecular Evolution 223
- 6.4 Nonrandom Mating 236
 - Box 6.6* Genotype frequencies under genetic drift 241

6.5	Conservation Genetics of the Illinois Greater Prairie Chicken	245	8.7	The Bell-Curve Fallacy and Other Misinterpretations of Heritability	321
	Summary 248 • Questions 248			Summary 325 • Questions 326	
	Exploring the Literature 250 • Citations 251			Exploring the Literature 327 • Citations 328	
CHAPTER 7			PART 3		
Evolution at Multiple Loci: Linkage and Sex			ADAPTATION		
		253			329
7.1	Evolution at Two Loci: Linkage Equilibrium and Linkage Disequilibrium	254	CHAPTER 9		
	<i>Box 7.1 The coefficient of linkage disequilibrium</i>	257	Studying Adaptation: Evolutionary Analysis of Form and Function		
	<i>Box 7.2 Hardy–Weinberg analysis for two loci</i>	258			331
	<i>Box 7.3 Sexual reproduction reduces linkage disequilibrium</i>	262	9.1	All Hypotheses Must Be Tested: The Giraffe's Neck Reconsidered	332
7.2	Practical Reasons for Measuring Linkage Disequilibrium	267	9.2	Experiments	335
	<i>Box 7.4 Estimating the age of the CCR5-Δ32 mutation</i>	269		<i>Box 9.1 A primer on statistical testing</i>	340
7.3	The Adaptive Significance of Sex	274	9.3	Observational Studies	340
	Summary 285 • Questions 286		9.4	The Comparative Method	345
	Exploring the Literature 287 • Citations 288			<i>Box 9.2 Calculating phylogenetically independent contrasts</i>	348
CHAPTER 8			9.5	Phenotypic Plasticity	350
Evolution at Multiple Loci: Quantitative Genetics			9.6	Trade-Offs and Constraints	351
		289	9.7	Selection Operates on Different Levels	358
8.1	The Nature of Quantitative Traits	289		<i>Box 9.3 Categories of transposable elements</i>	362
8.2	Identifying Loci That Contribute to Quantitative Traits	294	9.8	Strategies for Asking Interesting Questions	368
	<i>Box 8.1 QTL mapping</i>	300		Summary 368 • Questions 369	
8.3	Measuring Heritable Variation	303		Exploring the Literature 370 • Citations 371	
	<i>Box 8.2 Additive genetic variation versus dominance genetic variation</i>	306	CHAPTER 10		
8.4	Measuring Differences in Survival and Reproductive Success	308	Sexual Selection		
	<i>Box 8.3 The selection gradient and the selection differential</i>	310			373
	<i>Box 8.4 Selection on multiple traits and correlated characters</i>	311	10.1	Sexual Dimorphism and Sex	374
8.5	Predicting the Evolutionary Response to Selection	313	10.2	Male–Male Competition: Intrasexual Selection	381
8.6	Modes of Selection and the Maintenance of Genetic Variation	317			

	Box 10.1 <i>Alternative male mating strategies</i>	385		Box 12.1 <i>A trade-off between cancer risk and aging</i>	464
10.3	Female Choice	388		Box 12.2 <i>Is there an evolutionary explanation for menopause?</i>	475
	Box 10.2 <i>Extra-pair copulations and multiple mating</i>	392	12.3	How Many Offspring Should an Individual Produce in a Given Year?	474
	Box 10.3 <i>Runaway sexual selection in stalk-eyed flies?</i>	401	12.4	How Big Should Each Offspring Be?	481
10.4	Diversity in Sex Roles	404	12.5	Conflicts of Interest between Life Histories	487
10.5	Sexual Selection in Plants	406	12.6	Life Histories in a Broader Evolutionary Context	490
10.6	Sexual Dimorphism in Body Size in Humans	410		Summary 496 • Questions 496	
	Summary 412 • Questions 413			Exploring the Literature 497 • Citations 498	
	Exploring the Literature 415 • Citations 416				

CHAPTER 11

Kin Selection and Social Behavior 419

11.1	Kin Selection and the Evolution of Altruism	420
	Box 11.1 <i>Calculating coefficients of relatedness</i>	421
	Box 11.2 <i>Kin recognition</i>	426
11.2	Evolution of Eusociality	431
	Box 11.3 <i>The evolution of the sex ratio</i>	434
11.3	Parent–Offspring Conflict	439
11.4	Reciprocal Altruism	443
	Box 11.4 <i>Prisoner's dilemma: Analyzing cooperation and conflict using game theory</i>	445
	Summary 449 • Questions 450	
	Exploring the Literature 451 • Citations 452	

CHAPTER 12

Aging and Other Life History Characters 455

12.1	Basic Issues in Life History Analysis	457
12.2	Why Do Organisms Age and Die?	459

CHAPTER 13

Evolution and Human Health 501

13.1	Evolving Pathogens: Evasion of the Host's Immune Response	503
13.2	Evolving Pathogens: Antibiotic Resistance	509
13.3	Evolving Pathogens: Virulence	513
13.4	Tissues as Evolving Populations of Cells	517
	Box 13.1 <i>Genetic sleuthing solves a medical mystery</i>	518
13.5	The Adaptationist Program Applied to Humans	521
13.6	Adaptation and Medical Physiology: Fever	528
13.7	Adaptation and Human Behavior: Parenting	533
	Box 13.2 <i>Is cultural evolution Darwinian?</i>	534
	Summary 542 • Questions 542	
	Exploring the Literature 543 • Citations 544	

PART 4

THE HISTORY OF LIFE 547

CHAPTER 14

Reconstructing Evolutionary Trees 549

14.1	The Logic of Phylogeny Inference	550
14.2	The Phylogeny of Whales	555
	Box 14.1 <i>Alternatives to parsimony: Maximum likelihood and genetic distances</i>	562

14.3	Using Phylogenies to Answer Questions	567	
	Summary 578 • Questions 578		
	Exploring the Literature 581 • Citations 581		
CHAPTER 15			
Mechanisms of Speciation		583	
15.1	Species Concept	583	
	<i>Box 15.1 What about bacteria and archaea?</i>	585	
15.2	Mechanisms of Genetic Isolation	589	
15.3	Mechanisms of Divergence	596	
15.4	Secondary Contact	603	
15.5	The Genetics of Speciation	608	
	Summary 611 • Questions 612		
	Exploring the Literature 613 • Citations 613		
CHAPTER 16			
The Origins of Life and Precambrian Evolution		615	
16.1	What Was the First Living Thing?	616	
16.2	Where Did the First Living Thing Come From?	626	
	<i>Box 16.1 The Panspermia Hypothesis</i>	628	
16.3	What Was the Last Common Ancestor of All Extant Organisms and What Is the Shape of the Tree of Life?	636	
	<i>Box 16.2 Horizontal gene transfer in bacteria</i>	647	
16.4	How Did the Last Common Ancestor's Descendants Evolve into Today's Organisms?	651	
	Summary 656 • Questions 657		
	Exploring the Literature 658 • Citations 659		
CHAPTER 17			
The Cambrian Explosion and Beyond		663	
17.1	The Nature of the Fossil Record	664	
17.2	The Cambrian Explosion	667	
17.3	Macroevolutionary Patterns	677	
17.4	Mass Extinctions	684	
	Summary 697 • Questions 697		
	Exploring the Literature 698 • Citations 699		
CHAPTER 18			
Development and Evolution		701	
18.1	Homeotic Genes, Pattern Formation, and Diversification	702	
18.2	The Genetics of Homology: Limbs	709	
18.3	Flowers	716	
18.4	Lessons from Evo-Devo Research	721	
	Summary 723 • Questions 724		
	Exploring the Literature 724 • Citations 725		
CHAPTER 19			
Human Evolution		727	
19.1	Relationships among Humans and the Extant Apes	728	
	<i>Box 19.1 Genetic differences between humans, chimpanzees, and gorillas</i>	736	
19.2	The Recent Ancestry of Humans	735	
19.3	The Origin of the Species <i>Homo sapiens</i>	746	
	<i>Box 19.2 Genetic diversity among living humans</i>	749	
	<i>Box 19.3 Using linkage disequilibrium to date the divergence between African and non-African populations</i>	758	
19.4	The Evolution of Uniquely Human Traits	759	
	Summary 765 • Questions 766		
	Exploring the Literature 767 • Citations 767		
Glossary		771	
Illustration Credits		778	
Index		784
