

second edition

Meteorology

Danielson • Levin • Abrams

Preface	x
Guided Tour	xv

Unit 1

Exploring the Atmosphere: What Lies Ahead?

Chapter 1

Introduction to Meteorological Inquiry

A First Look at Weather Systems

Overview and Chapter Goals	5
Chapter Goals	5
A Meteorological Puzzle	5
Searching for an Explanation	6

Weather Observations and Instruments	6
Observation Times	7
Observing Clouds and Visibility	8
Observing Present Weather and Precipitation	9
Observing Wind	10
Observing Temperature and Humidity	10
Observing Air Pressure	12

Weather Observations in Time and Space	15
The Context in Time	15
The Context in Space	15
A Hypothesis	16
A Mapping Aid: The Plotting Model	16
Weather Map Patterns on July 14, 1992	17
Evaluating the Weather System Hypothesis	19

Basic Models of High and Low Pressure Systems	20
A Preliminary Model	20
Evaluating the Model: How Well Does It Work?	22
Adding Fronts to the Model	22
Evaluating the Frontal Cyclone Model	24

Applying the Frontal Cyclone Model	28
Using the Model to Forecast Local Weather	28
Using the Model to Estimate Weather	
Conditions Elsewhere	28

Going Further: Reflection: Does the Model Explain the Weather?	28
---	-----------

Chapter 2

Is the Atmosphere's Composition Changing?

Overview and Chapter Goals	33
Chapter Goals	33
Properties of Matter	33
Large-Scale Properties	33
Atomic Structure of Matter	34
Molecules in Motion: Kinetic Theory and the Atomic Model	37

The Well-Mixed Atmosphere	37
Kinetic Theory and Temperature	37
Kinetic Theory and Kinetic Energy	37
Phases of Matter	39
Kinetic Theory and Air Pressure	39
Pressure, Temperature, and Density	41
The Gas Law	41

Air Composition and Air Quality **43**

Nitrogen, Oxygen, and Argon	43
Water Vapor and the Hydrologic Cycle	43
Carbon Dioxide	45
Air Pollutants	47

The Upper Atmosphere **48**

A Vertical Profile of the Atmosphere	48
The Troposphere	48
The Stratosphere	50
Ozone in the Stratosphere	50
The Mesosphere	53
The Thermosphere	53
The Ionosphere	54

Going Further: Composition Changes:

A Broader Perspective	57
Past Atmospheres on Earth	57
The Atmospheres of Other Planets	57
Reflection	57

Chapter 3

How Does the Atmosphere Maintain Such a Steady Temperature?

Overview and Chapter Goals	63
Chapter Goals	63
Sunlight: The Atmosphere's Ultimate Energy Source	63
Sunlight, Heat, and Energy: A Thought Experiment	63
The Distribution of Insolation across the Earth	64

Solar Fluxes in the Atmosphere and at the Earth's Surface	70
Insolation and the Atmosphere	70
Insolation at the Earth's Surface	71
Temperature Changes Due to Absorbed Sunlight	72

Radiation: A Model	74
Radiation as Waves and Particles	74
Emission and Absorption of Radiation	76
The Electromagnetic Spectrum	76
Continuous Spectra	78
Line Spectra	80

Infrared Radiation	82
Radiation Emitted by the Earth's Surface	82
Longwave Radiation Absorbed by the Atmosphere	82
Radiation Emitted by the Atmosphere	82
The Greenhouse Effect	83

Contents

The Radiation Budget	83
Conductive and Convective Fluxes	84
Sensible Heat Flux	84
Latent Heat Flux	85
Earth's Energy Budget and Radiative Forcing	88
Balancing the Budget	88
Radiative Forcing	89
Reflection	89

Unit 2

Humidity, Clouds, and Precipitation: How Does the Atmosphere Produce Rain?

Chapter 4

Humidity

Overview and Chapter Goals	95
Chapter Goals	95
Evaporation	95
Evaporation as a Molecular Process	95
Variations in Equilibrium Vapor Pressure	96
Humidity Variables and Measuring Instruments	98
Mixing Ratio	98
Relative Humidity	99
Dewpoint Temperature	100
Wet-Bulb Temperature	102
Humidity Variations and Their Effect on Human Comfort	104
Humidity Variations with Time of Day	104
Seasonal and Regional Variations in Humidity	104
Formation of Dew and Frost	107
Dew	107
Frost	109
How Does Water Vapor Nucleate in the Free Air?	109
Condensation	109
Going Further: Curvature and Solute Effects	112
Nucleation at Temperatures below 0°C	114

Chapter 5

How Do Clouds Form?

Overview and Chapter Goals	121
Chapter Goals	121
Basic Cloud Genera	121
Low Clouds	121
Middle Clouds	121
High Clouds	123
Clouds of Vertical Development	123
Mechanisms of Cloud Formation: Overview	126
Upward Motion as a Cooling Mechanism	127
Adiabatic Changes in a Rising Air Parcel	127
Graphing Dry Adiabatic Processes	129
Moist Adiabatic Processes	132
Cloud Formation by Buoyant Lifting	133
Stability: Basic Concepts	134

Parcels versus the Environment	134
Cloud Formation Due to Static Instability	135
Cumulus Cloud Growth	139
Cloud Formation by Forced Lifting	141
Orographic Lifting	141
Lifting in Fronts and Low Pressure Centers	142
Going Further: Lifting Destabilizes an Air Layer	143
Cloud Formation Due to Cooling by the Earth's Surface	144
Radiation Fog	144
Advection Fog	145
Some Other Cloud Formation Mechanisms	146
Cloud Formation by Mixing	146
Cloud Formation by Water Vapor Uptake	149
Cloud Metamorphosis	149

Chapter 6

Precipitation

Overview and Chapter Goals	153
Chapter Goals	153
How Is Precipitation Generated?	153
Condensation and Deposition	153
Collision and Coalescence	154
The Bergeron Process	155
Using Radar to Observe Precipitation in Clouds	158
Precipitation Types	163
Snow	163
Rain	163
Snow Pellets	164
Ice Pellets	164
Freezing Rain	165
Hail	166
The Distribution of Precipitation	168
Precipitation Modification: The Theory	171
Warm Rain Modification	171
Bergeron Process Modification	172
Going Further: Precipitation Modification in Practice	175
Experimental Design	175
Cloud Seeding Programs: Some Examples	175
Inadvertent Precipitation Modification	176
Social and Legal Concerns	177
Perspective	179

Unit 3

Synoptic-Scale Meteorology: How Are Weather Forecasts Made?

Chapter 7

Structure of Large Mid-Latitude Weather Systems

Overview and Chapter Goals	185
Chapter Goals	185
How Pressure Differences Arise	185

Forces and Motions	187
Newton's First Law of Motion	187
Newton's Second Law of Motion	187
Newton's Third Law of Motion	188
Forces Acting on the Atmosphere	189
The Force of Gravity	189
Pressure-Gradient Force	190
Coriolis Force	191
Geostrophic Balance	193
Gradient Flow	197
Friction	198
Vertical Motions and the Movement of Pressure Centers	200
Convergence and Divergence	200
Motions of High and Low Pressure Centers	201
Pressure, Temperature, and Thickness Relationships	203
Layer Thickness, Temperature, and Wind	203
Thickness, Fronts, and Jet Streams	204
Vertical Structure of Pressure Systems	205
Going Further: Backing, Veering, and Temperature Advection	208

Chapter 8

Air Masses, Fronts, and Frontal Cyclones

Overview and Chapter Goals	213
Chapter Goals	213
Air Masses	213
Air mass Source Regions	213
Continental Polar Air Masses	214
Maritime Polar Air Masses	216
Continental Tropical Air Masses	217
Maritime Tropical Air Masses	217
Fronts	219
What Is a Front?	219
Cold Fronts	220
Warm Fronts	225
Stationary Fronts	226
Special Cases of Stationary Fronts	226
Occluded Fronts	227
Formation and Dissipation of Fronts	229
Fronts on Weather Charts	229
Frontal Cyclones	231
Historical Background	231
The Norwegian Cyclone Model	231
Recent Advancements: A Conveyor Belt Model	233
What Causes Cyclone Development?	233
Short Waves and Long Waves	233
The Roles of Divergence and Vorticity	234
Baroclinic and Barotropic Flow	238
A Three-Dimensional Cyclone Development Model	238
Retrospective: The Norwegian Cyclone Model	240

Chapter 9

Weather Forecasting

Overview and Chapter Goals	245
-----------------------------------	------------

Chapter Goals	245
Forecasting Techniques	245
Persistence Forecasting	245
Forecasting Based on Local Conditions	246
Trend Forecasting	246
Cycles and Trend Forecasting	246
Interpolation	247
Steering	248
Weather Types	248
Numerical Weather Prediction	248
Climatology	248
Forecast Case Study: A Summer Night in Pittsburgh	249
First Step: Checking Present Conditions	249
Climatology	251
The Radar Image	251
Synoptic-Scale Maps	252
Computer Guidance	253
Moisture and Stability	255
Regional Weather Maps	258
The Forecast	261
Verifying the Forecast	261
Updating the Forecast	263
National Weather Service Forecasts and Services	263
The National Weather Service	263
NWS Forecast Products	264
NWS Research Activities	269
Commercial Weather Forecasting Services	271
Forecasts for Utility Companies	271
Forecasts for the Media	271
Forecasts for the Construction Industry	273
Forecasts for Government Agencies	273
Surface Transportation Forecasts	274
Forecasts for the Skiing Industry	274
International Forecasts	274
Reflection	274

Unit 4

Circulations Large and Small: Are There Limits to Atmospheric Predictability?

Chapter 10

Circulations on Many Scales and Their Interactions

Overview and Chapter Goals	281
Chapter Goals	281
Forms and Scales of Atmospheric Motion	281
Forms of Fluid Motion	281
Scales of Atmospheric Circulations	284
The Molecular Scale	284
Laminar Flow	284
The Transition to Turbulence	285
Turbulent Flow	286
Microscale Circulations	287

Forces on the Microscale	287
Surface Turbulence	287
The Dust Devil: A Microscale Circulation	287
Turbulence Aloft	290
Mesoscale Circulations	290
Forces and Origins	290
Land and Sea Breeze Circulations	291
Mountain and Valley Winds	293
The Effects of Mountain Ranges	294
Synoptic-Scale Circulations and Local Winds	294
Chinook Winds	295
Santa Ana Winds	295
Nor'easters	296
Lake Effect Snowstorms	296
Global-Scale Structures and the General Circulation	298
The Tropics	298
The Subtropics	301
Monsoon Circulations	302
Middle and High Latitudes	302
Observed General Circulation at the Earth's Surface	303
Observed 500-Millibar General Circulation	303
Ocean-Atmosphere Interactions	306
Global-Scale Ocean Currents	306
Upwelling	306
ENSO	308
Chaos and the Butterfly Effect	313

Chapter 11

Thunderstorms and Tornadoes

Overview and Chapter Goals	319
Chapter Goals	319
Thunderstorm Structure and Life Cycle	319
Life Cycle of a Thunderstorm	319
Thunderstorm Frequencies	322
Lightning and Thunder	325
Electrical Properties of Matter	325
Properties of Thunderstorm Electricity	326
How Does Charge Separation Occur in a Thunderstorm?	327
The Lightning Flash	329
Lightning Safety	330
Multicell and Severe Thunderstorms	332
Multicell Thunderstorms	333
Larger Associations of Thunderstorms	334
Supercell Thunderstorms	336
Tornadoes	340
Observing Tornadoes	340
How Do Tornadoes Form?	343
Waterspouts	346
Tornado Forecasting and Safety	346

Chapter 12

Hurricanes

Overview and Chapter Goals	355
Chapter Goals	355
Hurricanes and Tropical Weather	355
What Is a Hurricane?	355

When and Where Do Hurricanes Form?	355
Tropical Weather	356
Requirements for Tropical Cyclone Formation	356
A Tropical Storm Is Born	360
Tropical Storm Genesis (Days 1–3)	360
Tropical Cyclone Categories	361
Slight Strengthening (Days 4–5)	362
Tropical Cyclone Names	362
Andrew Tracks Northwestward (Days 6–8)	364
Paths of Tropical Cyclones	364
Predicting Andrew's Course	365
The Forecast	367
Andrew Becomes a Hurricane (Days 8–10)	368
Structure of Mature Hurricanes	368
The Hurricane's Eye	370
What Sustains the Hurricane?	370
Andrew Approaches Land: Warnings Are Issued	371
Hurricane Conditions: A Triple Threat	371
The Saffir-Simpson Scale	373
Hurricane Preparedness	373
Landfall and Dissipation (Days 10–14)	376
Observing the Hurricane Come Ashore	376
Andrew Weakens, Then Regenerates	378
A Second Landfall, Then Dissipation	379
Andrew's Legacy	379
Retrospective: Are Hurricanes and Tornadoes Predictable?	381

Chapter 13

Introduction to Climatology: How Stable Is Earth's Climate?

Overview and Chapter Goals	385
Chapter Goals	385
Defining and Measuring a Region's Climate	385
Standard Measures of Climate	385
Proxy Data	387
What Is a "Stable Climate"?	387
What Factors Determine a Region's Climate?	388
Constant Factors	389
Variable Factors	389
Climate Classification	394
Genetic Systems	394
Empirical Systems	395
The Köppen System: An Empirical Classification	396
A Snapshot of Earth's Changing Climates	397
Global-Scale Features	397
Moist Tropical (A) Climates	398
Going Further: Details of Köppen's A Climates	399
Dry (B) Climates	401
Going Further: Details of Köppen's B Climates	403
Moist Mild-Winter (C) Climates	403
Going Further: Details of Köppen's Cs Climate	407
Moist Cold-Winter (D) Climates	408
Polar (E) Climates	408
Highland (H) Climates	411
How Stable Is Earth's Climate?	414

Earth's Past Climates	414
Climatic Perturbations and Responses	416
Astronomical Perturbations	416
Geological Perturbations	417
Ocean-Atmosphere Interactions	417
Anthropogenic Changes	418
Effects of Chaos	419
Recapitulation	419

Special Topics

Chapter 14	
<i>Is the Atmosphere Warming?</i>	
Overview and Chapter Goals	423
Chapter Goals	423
Radiative Forcing: Key to Global Warming	423
Changes in Radiative Forcing	425
An Enhanced Greenhouse Effect	425
Variations in the Solar Constant	426
Changes in Atmospheric Particle Concentrations	427
Feedbacks to Radiative Forcing	429
The Nature of Feedback	429
Feedback through Changes in Longwave Radiation	430
Other Feedbacks to Radiative Forcing	431
Computer Models of Global Warming	432
Computer Models	432
What the Models Say about Global Warming	433
How Trustworthy Are the Models?	434
The Temperature Record: What Does It Say?	435
Global Mean Temperatures	435
Sources of Error in the Temperature Data	436
Other Temperature Data	437
Proxy Data of Global Warming	437
Is the Greenhouse Effect to Blame?	440
Global Warming and the Future	443
How Much Warming, If Any, Can We Expect?	443
Impacts of Global Warming	444
How Can We Respond to the Threat?	445
Urban Heat Islands: Climates of the Future?	447

Chapter 15	
<i>Light and Color in the Atmosphere</i>	
Overview and Chapter Goals	453
Chapter Goals	453
Light and Shadows	453
Locating Objects in the Sky	453
Brief Review of Light	454
Light and Shadow in the Atmosphere	454
Where Is That Object, Really? Atmospheric Refraction Effects	457
Refraction	458
The Effect of Refraction on Objects' Positions and Shapes	458
Mirages	460
The Color of Sky and Clouds	463
Why Is the Sky Blue?	463

Going Further: Rayleigh Scattering Calculations	463
The Brightness and Color of Clouds	466
Halos, Coronas, and Rainbows	468
Halos and Related Phenomena	468
Coronas and Similar Features	471
Going Further: Irisation	473
Rainbows and the Glory	474
Going Further: Supernumerary Bows	477

Chapter 16

Air Pollution

Overview and Chapter Goals	483
Chapter Goals	483
An Inventory of Air Pollutants	483
Sulfur Compounds	483
Nitrogen Compounds	484
Ozone	485
Other Atmospheric Constituents	487
Air Pollution Sources	489
The Indoor Atmosphere: Health Issues	490
Oxygen Deficits	490
Radon	491
Smoking	491
Household Products	491
Factors Affecting the Dispersion of Air Pollution	492
Atmospheric Stability	492
Winds	493
Topography	493
Monitoring and Managing Our Air Quality	496
Air Quality Legislation and Standards	496
Air Pollution Abatement	497
Acid Deposition	499
Sources and Deposition Areas	499
How Acidic Is the Rain?	500
Consequences of Acid Deposition	500
Acid Deposition Abatement Measures	500

Appendices

A	Some Notable Dates in the History of Meteorology	506
B	Scientific Notation	508
C	SI Units of Measurement	509
D	Other Units, Conversion Factors, and Constants	510
E	List of Elements	512
F	Latitude and Longitude	513
G	Time Zones	515
H	Weather Plotting Symbols	517
I	Windchill and Heat Index Tables	520
J	Humidity Table	522
K	Saturation Mixing Ratio Diagram	523
L	Thermodynamic Diagram	525
M	Climatological Data	526
N	Atomic Structure: A Review of Some Basics	531

Glossary	535
