Preface xii

CHAPTER 1

Relativity 1

1.1 Special Relativity 2

All motion is relative; the speed of light in free space is the same for all observers

1.2 Time Dilation 5

A moving clock ticks more slowly than a clock at rest

1.3 Doppler Effect 10

Why the universe is believed to be expanding

1.4 Length Contraction 15

Faster means shorter

1.5 Twin Paradox 17

A longer life, but it will not seem longer

1.6 Electricity and Magnetism 19

Relativity is the bridge

1.7 Relativistic Momentum 22

Redefining an important quantity

1.8 Mass and Energy 26

Where $E_0 = mc^2$ comes from

1.9 Energy and Momentum 30

How they fit together in relativity

1.10 General Relativity 33

Gravity is a warping of spacetime

APPENDIX I: The Lorentz Transformation 37

APPENDIX II: Spacetime 46

CHAPTER 2

Particle Properties of Waves 52

- 2.1 Electromagnetic Waves 53
Coupled electric and magnetic oscillations that move with the speed of light and exhibit typical wave behavior
- 2.2 Blackbody Radiation 57
Only the quantum theory of light can explain its origin
- 2.3 Photoelectric Effect 62
The energies of electrons liberated by light depend on the frequency of the light
- 2.4 What Is Light? 67
Both wave and particle
- 2.5 X-Rays 68
They consist of high-energy photons
- 2.6 X-Ray Diffraction 72
How x-ray wavelengths can be determined
- 2.7 Compton Effect 75
Further confirmation of the photon model
- 2.8 Pair Production 79
Energy into matter
- 2.9 Photons and Gravity 85
Although they lack rest mass, photons behave as though they have gravitational mass

CHAPTER 3

Wave Properties of Particles 92

- 3.1 De Broglie Waves 93
A moving body behaves in certain ways as though it has a wave nature
- 3.2 Waves of What? 95
Waves of probability
- 3.3 Describing a Wave 96
A general formula for waves
- 3.4 Phase and Group Velocities 99
A group of waves need not have the same velocity as the waves themselves
- 3.5 Particle Diffraction 104
An experiment that confirms the existence of de Broglie waves

- 3.6 Particle in a Box 106
Why the energy of a trapped particle is quantized
- 3.7 Uncertainty Principle I 108
We cannot know the future because we cannot know the present
- 3.8 Uncertainty Principle II 113
A particle approach gives the same result
- 3.9 Applying the Uncertainty Principle 114
A useful tool, not just a negative statement

CHAPTER 4

Atomic Structure 119

- 4.1 The Nuclear Atom 120
An atom is largely empty space
- 4.2 Electron Orbits 124
The planetary model of the atom and why it fails
- 4.3 Atomic Spectra 127
Each element has a characteristic line spectrum
- 4.4 The Bohr Atom 130
Electron waves in the atom
- 4.5 Energy Levels and Spectra 133
A photon is emitted when an electron jumps from one energy level to a lower level
- 4.6 Correspondence Principle 138
The greater the quantum number, the closer quantum physics approaches classical physics
- 4.7 Nuclear Motion 140
The nuclear mass affects the wavelengths of spectral lines
- 4.8 Atomic Excitation 142
How atoms absorb and emit energy
- 4.9 The Laser 145
How to produce light waves all in step

APPENDIX: Rutherford Scattering 152

CHAPTER 5

Quantum Mechanics 160

- 5.1 Quantum Mechanics 161
Classical mechanics is an approximation of quantum mechanics

- 3.6 Particle in a Box 106
Why the energy of a trapped particle is quantized
- 3.7 Uncertainty Principle I 108
We cannot know the future because we cannot know the present
- 3.8 Uncertainty Principle II 113
A particle approach gives the same result
- 3.9 Applying the Uncertainty Principle 114
A useful tool, not just a negative statement

CHAPTER 4

Atomic Structure 119

- 4.1 The Nuclear Atom 120
An atom is largely empty space
- 4.2 Electron Orbits 124
The planetary model of the atom and why it fails
- 4.3 Atomic Spectra 127
Each element has a characteristic line spectrum
- 4.4 The Bohr Atom 130
Electron waves in the atom
- 4.5 Energy Levels and Spectra 133
A photon is emitted when an electron jumps from one energy level to a lower level
- 4.6 Correspondence Principle 138
The greater the quantum number, the closer quantum physics approaches classical physics
- 4.7 Nuclear Motion 140
The nuclear mass affects the wavelengths of spectral lines
- 4.8 Atomic Excitation 142
How atoms absorb and emit energy
- 4.9 The Laser 145
How to produce light waves all in step

APPENDIX: Rutherford Scattering 152

CHAPTER 5

Quantum Mechanics 160

- 5.1 Quantum Mechanics 161
Classical mechanics is an approximation of quantum mechanics

5.2	The Wave Equation	163
	<i>It can have a variety of solutions, including complex ones</i>	
5.3	Schrödinger's Equation: Time-Dependent Form	166
	<i>A basic physical principle that cannot be derived from anything else</i>	
5.4	Linearity and Superposition	169
	<i>Wave functions add, not probabilities</i>	
5.5	Expectation Values	170
	<i>How to extract information from a wave function</i>	
5.6	Operators	172
	<i>Another way to find expectation values</i>	
5.7	Schrödinger's Equation: Steady-State Form	174
	<i>Eigenvalues and eigenfunctions</i>	
5.8	Particle in a Box	177
	<i>How boundary conditions and normalization determine wave functions</i>	
5.9	Finite Potential Well	183
	<i>The wave function penetrates the walls, which lowers the energy levels</i>	
5.10	Tunnel Effect	184
	<i>A particle without the energy to pass over a potential barrier may still tunnel through it</i>	
5.11	Harmonic Oscillator	187
	<i>Its energy levels are evenly spaced</i>	
APPENDIX: The Tunnel Effect		193

CHAPTER 6

Quantum Theory of the Hydrogen Atom		200
6.1	Schrödinger's Equation for the Hydrogen Atom	201
	<i>Symmetry suggests spherical polar coordinates</i>	
6.2	Separation of Variables	203
	<i>A differential equation for each variable</i>	
6.3	Quantum Numbers	205
	<i>Three dimensions, three quantum numbers</i>	
6.4	Principal Quantum Number	207
	<i>Quantization of energy</i>	
6.5	Orbital Quantum Number	208
	<i>Quantization of angular-momentum magnitude</i>	
6.6	Magnetic Quantum Number	210
	<i>Quantization of angular-momentum direction</i>	

- 6.7 Electron Probability Density 212
No definite orbits
- 6.8 Radiative Transitions 218
What happens when an electron goes from one state to another
- 6.9 Selection Rules 220
Some transitions are more likely to occur than others
- 6.10 Zeeman Effect 223
How atoms interact with a magnetic field

CHAPTER 7

Many-Electron Atoms 228

- 7.1 Electron Spin 229
Round and round it goes forever
- 7.2 Exclusion Principle 231
A different set of quantum numbers for each electron in an atom
- 7.3 Symmetric and Antisymmetric Wave Functions 233
Fermions and bosons
- 7.4 Periodic Table 235
Organizing the elements
- 7.5 Atomic Structures 238
Shells and subshells of electrons
- 7.6 Explaining the Periodic Table 240
How an atom's electron structure determines its chemical behavior
- 7.7 Spin-Orbit Coupling 247
Angular momenta linked magnetically
- 7.8 Total Angular Momentum 249
Both magnitude and direction are quantized
- 7.9 X-Ray Spectra 254
They arise from transitions to inner shells

APPENDIX: Atomic Spectra 259

CHAPTER 8

Molecules 266

- 8.1 The Molecular Bond 267
Electric forces hold atoms together to form molecules

- 8.2 Electron Sharing 269
The mechanism of the covalent bond
- 8.3 The H_2^+ Molecular Ion 270
Bonding requires a symmetric wave function
- 8.4 The Hydrogen Molecule 274
The spins of the electrons must be antiparallel
- 8.5 Complex Molecules 276
Their geometry depends on the wave functions of the outer electrons of their atoms
- 8.6 Rotational Energy Levels 282
Molecular rotational spectra are in the microwave region
- 8.7 Vibrational Energy Levels 285
A molecule may have many different modes of vibration
- 8.8 Electronic Spectra of Molecules 291
How fluorescence and phosphorescence occur

CHAPTER 9

Statistical Mechanics 296

- 9.1 Statistical Distributions 297
Three different kinds
- 9.2 Maxwell-Boltzmann Statistics 298
Classical particles such as gas molecules obey them
- 9.3 Molecular Energies in an Ideal Gas 300
They vary about an average of $\frac{3}{2}kT$
- 9.4 Quantum Statistics 305
Bosons and fermions have different distribution functions
- 9.5 Rayleigh-Jeans Formula 311
The classical approach to blackbody radiation
- 9.6 Planck Radiation Law 313
How a photon gas behaves
- 9.7 Einstein's Approach 318
Introducing stimulated emission
- 9.8 Specific Heats of Solids 320
Classical physics fails again
- 9.9 Free Electrons in a Metal 323
No more than one electron per quantum state

9.10 Electron-Energy Distribution 325

Why the electrons in a metal do not contribute to its specific heat except at very high and very low temperatures

9.11 Dying Stars 327

What happens when a star runs out of fuel

CHAPTER 10

The Solid State 335

10.1 Crystalline and Amorphous Solids 336

Long-range and short-range order

10.2 Ionic Crystals 338

The attraction of opposites can produce a stable union

10.3 Covalent Crystals 342

Shared electrons lead to the strongest bonds

10.4 Van der Waals Bond 345

Weak but everywhere

10.5 Metallic Bond 348

A gas of free electrons is responsible for the characteristic properties of a metal

10.6 Band Theory of Solids 354

The energy band structure of a solid determines whether it is a conductor, an insulator, or a semiconductor

10.7 Semiconductor Devices 361

The properties of the p-n junction are responsible for the microelectronics industry

10.8 Energy Bands: Alternative Analysis 369

How the periodicity of a crystal lattice leads to allowed and forbidden bands

10.9 Superconductivity 376

No resistance at all, but only at very low temperatures (so far)

10.10 Bound Electron Pairs 381

The key to superconductivity

CHAPTER 11

Nuclear Structure 387

11.1 Nuclear Composition 388

Atomic nuclei of the same element have the same numbers of protons but can have different numbers of neutrons

- 11.2 Some Nuclear Properties 392
Small in size, a nucleus may have angular momentum and a magnetic moment
- 11.3 Stable Nuclei 396
Why some combinations of neutrons and protons are more stable than others
- 11.4 Binding Energy 399
The missing energy that keeps a nucleus together
- 11.5 Liquid-Drop Model 403
A simple explanation for the binding-energy curve
- 11.6 Shell Model 408
Magic numbers in the nucleus
- 11.7 Meson Theory of Nuclear Forces 412
Particle exchange can produce either attraction or repulsion

CHAPTER 12

Nuclear Transformations 418

- 12.1 Radioactive Decay 419
Five kinds
- 12.2 Half-Life 424
Less and less, but always some left
- 12.3 Radioactive Series 430
Four decay sequences that each end in a stable daughter
- 12.4 Alpha Decay 432
Impossible in classical physics, it nevertheless occurs
- 12.5 Beta Decay 436
Why the neutrino should exist and how it was discovered
- 12.6 Gamma Decay 440
Like an excited atom, an excited nucleus can emit a photon
- 12.7 Cross Section 441
A measure of the likelihood of a particular interaction
- 12.8 Nuclear Reactions 446
In many cases, a compound nucleus is formed first
- 12.9 Nuclear Fission 450
Divide and conquer
- 12.10 Nuclear Reactors 454
 $E_0 = mc^2 + \text{\$}\text{\$}\text{\$}$

12.11	Nuclear Fusion in Stars	460
	<i>How the sun and stars get their energy</i>	
12.12	Fusion Reactors	463
	<i>The energy source of the future?</i>	
APPENDIX: Theory of Alpha Decay		468

CHAPTER 13

Elementary Particles 474

13.1	Interactions and Particles	475
	<i>Which affects which</i>	
13.2	Leptons	477
	<i>Three pairs of truly elementary particles</i>	
13.3	Hadrons	481
	<i>Particles subject to the strong interaction</i>	
13.4	Elementary Particle Quantum Numbers	485
	<i>Finding order in apparent chaos</i>	
13.5	Quarks	489
	<i>The ultimate constituents of hadrons</i>	
13.6	Field Bosons	494
	<i>Carriers of the interactions</i>	
13.7	The Standard Model and Beyond	496
	<i>Putting it all together</i>	
13.8	History of the Universe	498
	<i>It began with a bang</i>	
13.9	The Future	501
	<i>"In my beginning is my end." (T. S. Eliot, Four Quartets)</i>	

APPENDIX

Atomic Masses 507

Answers to Odd-Numbered Exercises	516
For Further Study	525
Credits	529
Index	531
