

REINFORCED CONCRETE MECHANICS AND DESIGN

FOURTH EDITION

JAMES G. MACGREGOR • JAMES K. WIGHT

Contents

	PREFACE	xiii
	ABOUT THE AUTHORS	xix
CHAPTER 1	INTRODUCTION	1
	1-1 Reinforced Concrete Structures	1
	1-2 Mechanics of Reinforced Concrete	1
	1-3 Reinforced Concrete Members	3
	1-4 Factors Affecting Choice of Concrete for a Structure	4
	1-5 Historical Development of Concrete and Reinforced Concrete as Structural Materials	8
	1-6 Building Codes and the ACI Code	10
CHAPTER 2	THE DESIGN PROCESS	12
	2-1 Objectives of Design	12
	2-2 The Design Process	12
	2-3 Limit States and the Design of Reinforced Concrete	13
	2-4 Structural Safety	17
	2-5 Probabilistic Calculation of Safety Factors	19
	2-6 Design Procedures Specified in the ACI Building Code	20
	2-7 Revisions to Load Factors and Load Combinations in the 2002 ACI Code	23
	2-8 Loadings and Actions	31
	2-9 Design for Economy	41

- 2-10 Handbooks and Design Aids 43
- 2-11 Customary Dimensions and Construction Tolerances 43
- 2-12 Accuracy of Calculations 43
- 2-13 "Shall be Permitted" 44
- 2-14 Inspection 44

CHAPTER 3

MATERIALS

45

- 3-1 Concrete 45
- 3-2 Behavior of Concrete Failing in Compression 45
- 3-3 Compressive Strength of Concrete 48
- 3-4 Strength Under Tensile and Multiaxial Loads 60
- 3-5 Stress-Strain Curves for Concrete 68
- 3-6 Time-Dependent Volume Changes 74
- 3-7 High-Strength Concrete 87
- 3-8 Lightweight Concrete 89
- 3-9 Durability of Concrete 90
- 3-10 Behavior of Concrete Exposed to High and Low Temperatures 91
- 3-11 Shotcrete 92
- 3-12 High Alumina Cement 92
- 3-13 Reinforcement 92
- 3-14 Fiber Reinforced Polymer (FRP) Reinforcement 98

CHAPTER 4

FLEXURE: BASIC CONCEPTS, RECTANGULAR BEAMS

100

- 4-1 Introduction 100
- 4-2 Flexure Theory 103
- 4-3 Analysis of Reinforced Concrete Beams 115
- 4-4 Design of Rectangular Beams 137

CHAPTER 5

FLEXURE: T BEAMS, BEAMS WITH COMPRESSION REINFORCEMENT, AND SPECIAL CASES

163

- 5-1 Introduction 163
- 5-2 T Beams 163
- 5-3 Beams with Compression Reinforcement 182
- 5-4 Unsymmetrical Beam Sections or Beams Bent about Two Axes 198
- 5-5 Analysis of Moment Capacity Based on Strain Compatibility 201
- 5-6 Design of Members with FRP Reinforcement-Design According to ACI 440 Report 204

CHAPTER 6

SHEAR IN BEAMS

209

- 6-1 Introduction 209
- 6-2 Basic Theory 211

CHAPTER 10	CONTINUOUS BEAMS AND ONE-WAY SLABS	424
10-1	Introduction	424
10-2	Continuity in Reinforced Concrete Structures	424
10-3	Moments and Shears in Continuous Beams	427
10-4	One-Way Slabs	436
10-5	Continuous Beams	452
10-6	Design of Girders	470
10-7	Joist Floors	471
10-8	Moment Redistribution	473
CHAPTER 11	COLUMNS: COMBINED AXIAL LOAD AND BENDING	475
11-1	Introduction	475
11-2	Tied and Spiral Columns	477
11-3	Interaction Diagrams	482
11-4	Interaction Diagrams for Concrete Columns	484
11-5	Design of Short Columns	503
11-6	Contributions of Steel and Concrete to Column Strength	520
11-7	Biaxially Loaded Columns	522
CHAPTER 12	SLENDER COLUMNS	534
12-1	Introduction	534
12-2	Behavior and Analysis of Pin-Ended Columns	539
12-3	Behavior of Restrained Columns in Nonsway Frames	555
12-4	Design of Columns in Nonsway Frames	559
12-5	Behavior of Restrained Columns in Sway Frames	573
12-6	Calculation of Moments in Sway Frames by Using Second-Order Analyses	575
12-7	Design of Columns in Sway Frames	580
12-8	General Analysis of Slenderness Effects	602
12-9	Frame Stability	603
CHAPTER 13	TWO-WAY SLABS: BEHAVIOR, ANALYSIS, AND DIRECT DESIGN METHOD	608
13-1	Introduction	608
13-2	History of Two-Way Slabs	610
13-3	Behavior of a Slab Loaded to Failure in Flexure	610
13-4	Statical Equilibrium of Two-Way Slabs	613
13-5	Distribution of Moments in Slabs	616
13-6	Direct Design Method: Introduction	623
13-7	Shear Strength of Two-Way Slabs	645

13-8	Combined Shear and Moment Transfer in Two-Way Slabs	664
13-9	Details and Reinforcement Requirements	686
13-10	Design of Slabs Without Beams	692
13-11	Construction Loads on Slabs	714
13-12	Slab Deflections	714
13-13	Design of Slabs with Beams in Two Directions	717
CHAPTER 14	EQUIVALENT FRAME METHOD	733
14-1	Introduction	733
14-2	Equivalent Frame Analysis of Slab Systems for Vertical Loads	734
14-3	Use of Computers in the Equivalent Frame Method	756
14-4	Equivalent Frame Analysis of Laterally Loaded Unbraced Frames	757
CHAPTER 15	TWO-WAY SLABS: ELASTIC, YIELD LINE, AND STRIP METHOD ANALYSES	759
15-1	Elastic Analysis of Slabs	759
15-2	Design of Reinforcement for Moments from a Finite Element Analysis	761
15-3	Yield Line Analysis of Slabs	763
15-4	Strip Method	776
CHAPTER 16	FOOTINGS	786
16-1	Introduction	786
16-2	Soil Pressure Under Footings	786
16-3	Structural Action of Strip and Spread Footings	795
16-4	Strip or Wall Footings	801
16-5	Spread Footings	805
16-6	Combined Footings	812
16-7	Mat Foundations	821
16-8	Pile Caps	821
CHAPTER 17	SHEAR FRICTION, HORIZONTAL SHEAR TRANSFER, AND COMPOSITE CONCRETE BEAMS	824
17-1	Introduction	824
17-2	Shear Friction	824
17-3	Composite Concrete Beams	835
CHAPTER 18	DISCONTINUITY REGIONS AND STRUT-AND-TIE MODELS	844
18-1	Introduction	844
18-2	Design Equation and Method of Solution	847

18-3	Struts	847
18-4	Ties	854
18-5	Nodes and Nodal Zones	854
18-6	Common Strut-and-Tie Models	866
18-7	Layout of Strut-and-Tie Models	869
18-8	Deep Beams	873
18-9	Continuous Deep Beams	886
18-10	Brackets and Corbels	898
18-11	Dapped Ends	910
18-11	Beam-Column Joints	915
18-12	Bearing Strength	928
18-13	T-Beam Flanges	930

CHAPTER 19**WALLS AND SHEAR WALLS****934**

19-1	Introduction	934
19-2	Tests of Walls with In-Plane Loads	937
19-3	Critical Loads for Axially Loaded Walls	941
19-4	Bearing Walls	946
19-5	Retaining Walls	950
19-6	Tilt-Up Walls	950
19-7	Shear Walls	950
19-8	Lateral Load Resisting Systems for Buildings	951
19-9	Shear Wall-Frame Interaction	953
19-10	Coupled Shear Walls	955
19-11	Design of Structural Walls—General	958
19-12	Flexural Strength of Shear Walls	966
19-13	Shear Strength of Shear Walls	971
19-14	Design of a Shear Wall for Wind Loads	973

CHAPTER 20**DESIGN FOR EARTHQUAKE RESISTANCE****990**

20-1	Introduction—Earthquakes and Seismic Response Spectra	990
20-2	Seismic Response Spectra	991
20-3	Seismic Design Philosophy	996
20-4	Seismic Forces on Structures	999
20-5	Ductility of Reinforced Concrete	1003
20-6	General ACI Code Provisions for Seismic Resistance	1004
20-7	Flexural Members of Special Moment Frames	1008
20-8	Columns in Special Moment Frames	1022
20-9	Joints of Special Moment Frames	1030
20-10	Structural Diaphragms	1032

- 20-11 Structural Walls 1034
- 20-12 Frame Members Not Proportioned to Resist Forces
Induced by Earthquake Motions 1038
- 20-13 Frames in Regions of Intermediate Seismic Risk 1038
- 20-14 Special Precast Structures 1038
- 20-15 Foundations 1039
