Measurement Uncertainty in Chemical Analysis

Springer

Contents

Analytical procedure in terms of measurement (quality) assurance	1	Uncertainty calculations in the certification of reference materials.	
Metrology in chemistry – a public task	8	1. Principles of analysis of variance	88
Chemical Metrology, Chemistry and the Uncertainty of Chemical Measurements	13	Uncertainty calculations in the certification of reference materials.	
From total allowable error via metrological traceability to uncertainty of measurement of the unbiased result	19	2. Homogeneity study	94
The determination of the uncertainty of reference materials certified by laboratory intercomparison	24	Uncertainty calculations in the certification of reference materials. 3. Stability study	99
Evaluation of uncertainty of reference materials	29	Some aspects of the evaluation of measurement uncertainty using reference materials	106
Should non-significant bias be included in the uncertainty budget?	34	Uncertainty – The key topic of metrology in chemistry	113
Evaluation of measurement uncertainty for analytical procedures using a linear calibration function	39	Estimating measurement uncertainty: reconciliation using a cause and effect approach	115
Measurement uncertainty distributions and uncertainty propagation by the simulation approach	44	Measurement uncertainty and its implications for collaborative study method validation and method performance parameters	120
Evaluation of uncertainty utilising the component by component approach	52	Uncertainty in chemical analysis and validation of the analytical method: acid value determination in oils	125
Uncertainty – Statistical approach, 1/f noise and chaos	59	A practical approach for assessment of sampling uncertainty	131
Calibration uncertainty	64	Quality Assurance for the analytical data of trace elements in food	138
Measurement uncertainty in microbiology cultivation methods	70	Customer's needs in relation to uncertainty and uncertainty budgets	143
The use of uncertainty estimates of test results in comparison with acceptance limits	74	Evaluating uncertainty in analytical measurements: pursuit of correctness	147
A model to set measurement quality objectives and to establish measurement uncertainty expectations in analytical chemistry laboratories using ASTM proficiency test data	80	A view of uncertainty at the bench analytical level	152
		Uncertainty of sampling in chemical analysis	158

Appropriate rather than representative sampling, based on acceptable levels of uncertainty	163
Experimental sensitivity analysis applied to sample preparation uncertainties: are ruggedness tests enough for measurement uncertainty estimates?	170
Relationship between the performance characteristics from an interlaboratory study programme and combined measurement uncertainty: a case study	174
The evaluation of measurement uncertainty from method validation studies Part 1: Description of a laboratory protocol	180
The evaluation of measurement uncertainty from method validation studies Part 2: The practical application of a laboratory protocol	187
Is the estimation of measurement uncertainty a viable alternative to validation?	197
Validation of the uncertainty evaluation for the determination of metals in solid samples by atomic spectrometry	201
Statistical evaluation of uncertainty for rapid tests with discrete readings – examination of wastes and soils	207
Influence of two grinding methods on the uncertainty of determinations of heavy metals in AAS-ETA of plant samples	211
Measurement uncertainty and its meaning in legal metrology of environment and public health	216

Uncertainty evaluation in proficiency testing: state-of-the-art, challenges, and perspectives	223
Uncertainty calculation and implementation of the static volumetric method for the preparation of NO and SO ₂ standard gas mixtures	227
Assessment of uncertainty in calibration of a gas flowmeter	237
Measurement uncertainty – a reliable concept in food analysis and for the use of recovery data?	242
In- and off-laboratory sources of uncertainty in the use of a serum standard reference material as a means of accuracy control in cholesterol determination	248
Assessment of limits of detection and quantitation using calculation of uncertainty in a new method for water determination	252
Study of the uncertainty in gravimetric analysis of the Ba ion	257
Assessment of permissible ranges for results of pH-metric acid number determinations using uncertainty calculation	263
Uncertainty and other metrological parameters of peroxide value determination in vegetable oils	267
Uncertainty of nitrogen determination by the Kjeldahl method	273
Glossary of analytical terms: Uncertainty	280
