

Series on Advances in Mathematics for Applied Sciences – Vol. 63

LECTURE NOTES ON THE DISCRETIZATION OF THE BOLTZMANN EQUATION

Editors

Nicola Bellomo and Renée Gatignol

World Scientific

CONTENTS

Preface	ix
Chapter 1. From the Boltzmann Equation to Discretized Kinetic Models	1
<i>N. Bellomo and R. Gatignol</i>	
Chapter 2. Discrete Velocity Models for Gas Mixtures	17
<i>C. Cercignani</i>	
Chapter 3. Discrete Velocity Models with Multiple Collisions	29
<i>R. Gatignol</i>	
Chapter 4. Discretization of the Boltzmann Equation and the Semicontinuous Model	59
<i>L. Preziosi and L. Rondoni</i>	
Chapter 5. Semi-continuous Extended Kinetic Theory	97
<i>W. Koller</i>	
Chapter 6. Steady Kinetic Boundary Value Problems	133
<i>H. Babovsky, D. Görsch and F. Schilder</i>	
Chapter 7. Computational Methods and Fast Algorithms for Boltzmann Equations	159
<i>L. Pareschi</i>	

Chapter 8. Discrete Velocity Models and Dynamical Systems	203
<i>A. Bobylev and N. Bernhoff</i>	
Chapter 9. Numerical Method for the Compton Scattering Operator	223
<i>C. Buet and S. Cordier</i>	
Chapter 10. Discrete Models of the Boltzmann Equation in Quantum Optics and Arbitrary Partition of the Velocity Space	259
<i>F. Schürrer</i>	
List of Contributors	299
