WILEY

THE GSM EVOLUTION

Mobile Packet Data Services

Peter Stuckmann

Contents

Preface ix

1 Introduction 1
1.1 The IMT-2000 Family of Systems . . . 1
1.2 GPRS and EDGE . . . 3
1.3 Traffic Engineering . . . 3
1.4 Outline . . . 4

2 Packet Data Support in GSM Networks 7
2.1 GSM—Global System for Mobile Communication . . . 7
2.1.1 GSM History . . . 7
2.1.2 Specifications and Phases . . . 8
2.1.3 Logical Architecture . . . 9
2.1.4 GSM Mobile Station . . . 11
2.1.5 GSM Numbers and Addresses . . . 12
2.1.6 Basic Telecommunication Services . . . 12
2.1.7 Radio Interface . . . 14
2.2 GPRS—General Packet Radio Service . . . 21
2.2.1 Design Approach . . . 22
2.2.2 Logical Architecture . . . 22
2.2.3 Service Types . . . 23
2.2.4 Parallel Use of Services . . . 25
2.2.5 Radio Interface . . . 25

3 Data Transmission in GPRS Networks 31
3.1 GPRS Tunneling Protocol (GTP) . . . 31
3.2 Base Station Subsystem GPRS Protocol (BSSGP) . . . 32
3.2.1 Flow Control between SGSN and BSS . . . 32
3.2.2 BSS Context . . . 33
3.2.3 BSS Packet Flow Context Creation . . . 34
3.2.4 BSS Packet Flow Context Modification . . . 35
3.2.5 BSS Packet Flow Context Deletion . . . 35
3.3 Sub-Network Dependent Convergence Protocol (SNDCP) . . . 35
3.4 Logical Link Control (LLC) . . . 36
3.4.1 Layer Entities and Service Access Points . . . 37
3.4.2 Logical Link Identifiers . . . 37
3.4.3 LLC Frame Structure . . . 37
3.4.4 LLC Frame Transmission . . . 38
3.4.5 Ciphering . . . 41
3.5 Radio Link Control (RLC) and Medium Access Control (MAC) . . . 41
3.5.1 Multiplexing Principles . . . 41
3.5.2 RLC/MAC Block Structure . . . 43

3.5.3 RLC Functions . . . 45
3.5.4 MAC Functions . . . 52
3.5.5 TBF Setup . . . 52
3.5.6 RLC Block Transfer . . . 54
3.5.7 Channel Coding Schemes . . . 56
3.6 Physical Layer (PL) . . . 57

4 GPRS Signaling **59**
4.1 The GPRS Control Plane . . . 59
4.2 Mobility Management . . . 60
4.2.1 Location Area and Routing Area . . . 60
4.2.2 Mobility Management Procedures . . . 63
4.2.3 Location Management Procedures . . . 67
4.2.4 GPRS Roaming . . . 75
4.3 Session Management . . . 76
4.3.1 The IP Interworking Model . . . 76
4.3.2 PDP Context Handling . . . 77
4.3.3 Session Management States . . . 78
4.3.4 Session Management Procedures . . . 79
4.4 Quality of Service Management . . . 83
4.4.1 General Aspects . . . 83
4.4.2 GPRS QoS Management . . . 86
4.4.3 QoS Attributes According to GPRS Release 97/98 . . . 89
4.4.4 QoS Profile Information Element . . . 91
4.4.5 QoS in GPRS Release 99 . . . 92
4.4.6 QoS in the Core Network Applying DiffServ . . . 93

5 EDGE and Evolution to GERAN **97**
5.1 EDGE—Enhanced Data Rates for GSM Evolution . . . 97
5.1.1 8-PSK Modulation versus GMSK Modulation . . . 98
5.1.2 Modulation and Coding Schemes . . . 99
5.1.3 Link Quality Control . . . 101
5.1.4 Flow Control Modifications for EDGE . . . 104
5.1.5 The EDGE Compact Concept . . . 104
5.2 GERAN—GSM/EDGE Radio Access Network . . . 105
5.2.1 GERAN System Architecture . . . 106
5.2.2 GERAN Protocol Architecture . . . 107
5.2.3 Core Network Evolution . . . 111

6 Evolving Applications and Traffic Models for GPRS and 3G **117**
6.1 WWW Applications . . . 117
6.1.1 Adapted Mosaic WWW Model . . . 119
6.1.2 Choi's Behavioral Model of Web Traffic . . . 120
6.2 E-mail Applications . . . 121
6.2.1 SMTP, POP3 and IMAP . . . 121
6.2.2 E-mail Traffic Model . . . 121
6.3 File Transfer Applications . . . 123
6.3.1 FTP Protocol . . . 123
6.3.2 FTP Traffic Model . . . 124

6.4 WAP-based Applications . . . 125
6.4.1 WAP Release 1.x . . . 125
6.4.2 WAP Release 2.0 . . . 126
6.4.3 Multimedia Messaging Service (MMS) . . . 127
6.4.4 WAP Traffic Model . . . 129
6.5 Streaming Applications . . . 130
6.5.1 Video Streaming . . . 130
6.5.2 Audio Streaming . . . 139
6.6 Voice over IP . . . 142
6.6.1 Session Initiation Protocol (SIP) . . . 142
6.6.2 Audio Codecs . . . 143
6.6.3 Performance Issues . . . 145
6.6.4 Voice Traffic Characteristics . . . 147
6.6.5 Packet Voice Traffic Model . . . 150

7 The (E)GPRS Simulator GPRSim 151
7.1 Structure of the (E)GPRS Simulator . . . 151
7.2 Packet Traffic Generators . . . 153
7.2.1 Internal Structure . . . 153
7.2.2 Implementation . . . 154
7.3 Traffic Generator for Circuit-switched Services . . . 155
7.4 Channel Management . . . 156
7.5 Quality of Service Management . . . 157
7.5.1 QoS Profile and Aggregate BSS QoS Profile . . . 157
7.5.2 PDP Context . . . 157
7.5.3 GPRS Register (GR) . . . 158
7.5.4 Connection Admission Control (CAC) . . . 158
7.5.5 Scheduler . . . 160
7.6 The SNDCP Layer . . . 161
7.7 The LLC Layer . . . 162
7.8 The RLC/MAC Layer . . . 164
7.8.1 RLC/MAC in the Base Station . . . 164
7.8.2 RLC/MAC in the Mobile Station . . . 172
7.9 Transceiver . . . 176
7.9.1 Channel Models . . . 176
7.9.2 Mobility Model . . . 178
7.9.3 Radio Propagation Model . . . 181
7.10 Input-Output Behavior . . . 182
7.10.1 Initialization . . . 182
7.10.2 Output/Statistics . . . 183
7.10.3 Graphical Presentation . . . 183
7.11 Web Interface . . . 183

8 Traffic Performance of GPRS and EGPRS 187
8.1 General Simulation Parameter Settings . . . 187
8.2 Performance and Capacity Measures . . . 188
8.3 Simulation Results for GPRS . . . 189
8.3.1 Fixed PDCH Scenarios . . . 189
8.3.2 Effect of the Multislot Capability . . . 193

8.3.3 On-demand PDCH Scenarios 193
8.3.4 Remarks on Mixed Configurations with Fixed and On-demand PDCHs 196
8.3.5 Summary of GPRS Performance 196
8.4 Simulation Results for EGPRS and Comparison with GPRS 197
8.4.1 Effect of the Modulation and Coding Schemes 197
8.4.2 Effect of LQC on the Block Error Probability 199
8.4.3 Performance Evaluation Regarding Different LQC Mechanisms 201
8.4.4 Summary of EGPRS Performance 202
8.5 Performance of Evolving Mobile Applications 202
8.5.1 WAP in Comparison to Internet Applications over GPRS . 205
8.5.2 Traffic Mix with WAP and WWW/e-mail over GPRS . . . 206
8.5.3 Video Streaming over GPRS and EGPRS 207
8.5.4 Summary of the Traffic Performance of Evolving Applications 209
8.6 Performance Gain through QoS Management 209
8.6.1 Scenario Parameter Settings 210
8.6.2 Simulation Results Neglecting the Core Network 210
8.6.3 Simulation Results Considering the Core Network 212
8.6.4 Summary of the Performance Gain through QoS Management 213

Acronyms **215**

Bibliography **223**

Index **233**
