

Area Array Packaging Processes

For BGA, Flip Chip,
and CSP

Ken Gilleo, Ph.D.

McGRAW-HILL ENGINEERING REFERENCE

CONTENTS

Preface ix

Chapter 1. Next-Generation Flip Chip Materials and Processing

1

1.0	INTRODUCTION	/ 1
1.1	CONCEPT	/ 1
1.1.1	Limits of Conventional FC Processing	/ 2
1.1.2	Next-Generation FC Technology Overview	/ 2
1.1.3	Primary Requirements for IC to Package/Substrate Assembly	/ 5
1.2	COST ANALYSIS	/ 7
1.2.1	Conventional FC Processing Using Capillary Flow Underfills	/ 7
1.2.2	Low-Cost, High-Throughput FC Processing Using No-Flow Underfills	/ 7
1.2.3	Cost Implications of Throughput, Chip Size, and Number of Chips per Panel	/ 10
1.3	HIGH-THROUGHPUT FC PROCESSING USING NO-FLOW UNDERFILLS	/ 11
1.3.1	Process Yield Analysis	/ 14
1.3.2	Yield Analysis Results and Discussion	/ 18
1.3.3	Placement Voids	/ 22
1.3.4	Summary of Process Yield Analysis	/ 22
1.3.5	Reliability Analysis	/ 23
1.3.6	No-Flow Underfill Reliability Results	/ 26
1.3.7	Reliability Data Discussion	/ 33
1.3.8	Summary of No-Flow Underfill Reliability	/ 35
1.3.9	Failure-Mode Analysis	/ 35
1.3.10	Summary of Failure-Mode Analysis	/ 42
1.4	WAFER-LEVEL FC PROCESSING	/ 42
1.4.1	Desired Coating Characteristics	/ 47
1.4.2	Coating Methods and Materials	/ 49
1.4.3	Chip Imaging and Placement	/ 53
1.4.4	Automated Vision Analysis of Underfill-Coated Chips	/ 55
1.4.5	Analysis of Underfill-Coated Chip Placement Accuracy	/ 59
1.4.6	Wafer-Level FC Processing Summary	/ 61
1.5	ANALYSIS OF NEXT-GENERATION FC PROCESSES	/ 62
1.5.1	Potential Void Formation	/ 62
1.5.2	Design Guidelines	/ 64
1.5.3	Placement Force Characterization of Compression Flow Underfill Processing	/ 65
1.5.4	Simulation Analysis of Compression Flow Underfill Processing	/ 67
1.6	COMPRESSION FLOW PLACEMENT MODEL AND ANALYSIS	/ 77
1.7	MODELING AND ANALYSIS OF CHIP FLOATING	/ 79
1.8	FC INTERCONNECTION YIELD ANALYSIS DURING THE REFLOW PROCESS	/ 85
1.8.1	FC Interconnection Yield Analysis	/ 86
1.8.2	Steady State Forces	/ 87
1.8.3	Solder Force	/ 88
1.8.4	Underfill Force	/ 90

- 1.8.5 Chip Collapse Time / 91
- 1.8.6 Underfill Viscosity Effect / 91
- 1.8.7 Processing Windows for Complete Chip Collapse / 92
- 1.8.8 Interconnection Density Effect / 93
- 1.8.9 Bumps in Contact Due to Placement / 93
- 1.9 SUMMARY / 94
- 1.10 REFERENCES / 96

Chapter 2. Flip Chip Assembly and Underfilling

99

- 2.0 INTRODUCTION / 99
- 2.1 PROCESS OVERVIEW / 100
 - 2.1.1 Capillary Flow Underfills / 100
 - 2.1.2 Fluxing Underfills / 100
 - 2.1.3 Wafer-Applied Underfills / 101
- 2.2 SUBSTRATE DESIGN / 101
 - 2.2.1 Layout / 101
 - 2.2.2 Copper and Solder Mask Requirements / 107
- 2.3 ASSEMBLY WITH CAPILLARY FLOW UNDERFILL / 109
 - 2.3.1 Die Presentation / 109
 - 2.3.2 Flux and Flux Application / 110
 - 2.3.3 Pick and Place / 113
 - 2.3.4 Reflow / 114
 - 2.3.5 Substrate Dehydration / 116
 - 2.3.6 Underfill Dispense and Cure / 116
 - 2.3.7 Rework / 121
- 2.4 ASSEMBLY WITH FLUXING UNDERFILLS / 123
 - 2.4.1 Substrate Dehydration / 124
 - 2.4.2 Application of Fluxing Underfill / 125
 - 2.4.3 Die Placement / 125
 - 2.4.4 Reflow / 126
 - 2.4.5 Rework / 127
- 2.5 WAFER-APPLIED UNDERFILLS / 128
 - 2.5.1 Application to Wafer / 128
 - 2.5.2 Placement / 130
 - 2.5.3 Reflow / 130
 - 2.5.4 Rework / 130
- 2.6 RELIABILITY / 130
 - 2.6.1 Component-Level Testing / 131
 - 2.6.2 Environmental and Board-Level Testing / 133
- 2.7 SUMMARY / 140
- 2.8 REFERENCES / 141

Chapter 3. BGA and CSP Rework: What Is Involved?

143

- 3.0 INTRODUCTION / 143
- 3.1 REWORK PROCESS CONSIDERATIONS / 143
 - 3.1.1 The Need for Process Control / 143
 - 3.1.2 What Is the Interconnection Method? / 144
 - 3.1.3 Do I Use Solder Paste or Flux? / 146
- 3.2 BASIC REWORK STEPS / 148
 - 3.2.1 Prebaking Components and PWBs / 148
 - 3.2.2 Component Removal / 148
 - 3.2.3 Pad Cleaning and Preparation Methods / 149
 - 3.2.4 Material Deposition Techniques / 150
 - 3.2.5 Component Placement / 154
 - 3.2.6 Component Reflow Profiling / 155
- 3.3 IDENTIFICATION OF PROCESS YIELD PROBLEMS / 156
 - 3.3.1 Balancing Profile Settings / 156

- 3.3.2 Problems Caused by Warping / 158
- 3.3.3 Simultaneous Reflow Issues / 159
- 3.4 COMPONENT REBALLING CONSIDERATIONS / 161
 - 3.4.1 Reballing Using Solder Preforms / 161
 - 3.4.2 Reballing Using Fixtures / 163
- 3.5 ANALYSIS USING X-RAY INSPECTION / 164
 - 3.5.1 Solder-Joint Size Variability / 165
 - 3.5.2 Solder-Joint Shape / 165
 - 3.5.3 Voids / 165
 - 3.5.4 Solder Shorts / 166
 - 3.5.5 Open Circuits / 166
- 3.6 PWB DESIGN GUIDELINES FOR REWORK / 167

Chapter 4. BGA Assembly Reliability

171

- 4.0 INTRODUCTION / 171
- 4.1 BALL GRID ARRAY (BGA) / 172
- 4.2 BGA AND QFP COMPARISON / 174
- 4.3 RELIABILITY OF BGA ASSEMBLY BY JPL-LED BGA CONSORTIUM / 175
- 4.4 BGA THERMAL CYCLING / 177
- 4.5 FAILURE CRITERIA / 180
- 4.6 CBGA FAILURE MECHANISMS / 181
 - 4.6.1 Damage Monitoring / 181
 - 4.6.2 Failure Mechanisms for Ceramic Assemblies / 181
- 4.7 PBGA FAILURE MECHANISMS / 182
- 4.8 PBGA THERMAL CYCLING RESULTS / 184
- 4.9 CBGA THERMAL CYCLING RESULTS / 185
 - 4.9.1 Fatigue Equation / 186
 - 4.9.2 Projections / 187
- 4.10 SHOCK AND THERMAL CYCLING SYNERGISM EFFECTS ON RELIABILITY OF CBGAs / 188
 - 4.10.1 Literature Review of Dynamic Behavior of BGAs / 189
 - 4.10.2 Vibration / 189
 - 4.10.3 Natural Frequency Measurement/Projection Test Results / 190
 - 4.10.4 Damage Induced by Thermal Cycling Alone / 190
 - 4.10.5 Damage Induced by a Priori Vibration / 191
 - 4.10.6 Synergism of Vibration and Thermal Cycling / 191
- 4.11 BGA CONCLUSIONS FOR QUALITY AND RELIABILITY ASSURANCE PROGRAMS / 192
- 4.12 REFERENCES / 193

Chapter 5. Die Attach and Rework

195

- 5.0 INTRODUCTION / 195
- 5.1 POLYMER BASICS / 195
 - 5.1.1 Thermoplastic versus Thermoset Polymers / 196
- 5.2 DIE-ATTACH MATERIALS / 197
 - 5.2.1 Metallurgic; Solders / 197
 - 5.2.2 Glass Die-Attach Materials / 197
 - 5.2.3 Polymer Die-Attach Adhesives / 197
- 5.3 DIE-ATTACH APPLICATION METHODS / 198
 - 5.3.1 Needle Dispensing / 198
 - 5.3.2 Stenciling / 198
 - 5.3.3 Screen Printing / 199
 - 5.3.4 Fluid Jetting / 199
 - 5.3.5 Spin Coating on Wafer / 199
 - 5.3.6 Film Application / 199
- 5.4 APPLICATIONS (USES) / 202
 - 5.4.1 BGAs / 202
 - 5.4.2 Lid Seal / 202
 - 5.4.3 Known Good Dies / 203
- 5.5 PROPERTIES / 203

5.5.1	Bond Strength	/ 203
5.5.2	Bonding Temperature/Curing	/ 204
5.5.3	Outgassing	/ 204
5.5.4	Electrical Conductivity	/ 204
5.5.5	Coefficient of Thermal Expansion	/ 204
5.5.6	Glass Transition Temperature T_g	/ 204
5.5.7	Thermal Conductivity Properties	/ 205
5.5.8	Thermal Stability	/ 205
5.5.9	Modulus	/ 205
5.5.10	Solubility/Chemical Resistance	/ 205
5.5.11	Debonding Characteristics	/ 205
5.5.12	Test Methods	/ 206
5.6	RELIABILITY	/ 206
5.6.1	Heat Aging	/ 206
5.6.2	Thermocycling	/ 206
5.6.3	Temperature and Humidity (T&H)	/ 206
5.6.4	Failure Modes and Mechanisms	/ 207
5.7	REWORK	/ 207
5.7.1	Thermosets	/ 207
5.7.2	Thermoplastics	/ 207
5.8	SUMMARY AND CONCLUSIONS	/ 208
5.9	REFERENCES	/ 208

Chapter 6. Liquid Encapsulation Equipment and Processes

209

6.0	INTRODUCTION	/ 209
6.1	MODERN TRENDS IN PACKAGING	/ 209
6.1.1	COB	/ 209
6.1.2	BGAs	/ 210
6.1.3	Flip Chips (FCs)	/ 210
6.1.4	Chip Scale Packages (CSPs)	/ 210
6.2	ENCAPSULATION MATERIALS	/ 210
6.2.1	Basic Chemistry	/ 211
6.2.2	Functionality	/ 211
6.2.3	Performance Characteristics	/ 211
6.2.4	Handling and Storage	/ 212
6.3	ENCAPSULATION METHODS	/ 212
6.3.1	Overmolding	/ 212
6.3.2	Overmolding Equipment	/ 212
6.3.3	Needle Dispensing	/ 213
6.3.4	Needle Dispensing Equipment	/ 214
6.4	PLATFORM DESIGN AND CONSTRUCTION	/ 214
6.5	XY POSITIONING MECHANISMS	/ 214
6.5.1	Conventional Positioning Assemblies	/ 214
6.5.2	z Positioning (Vertical Control)	/ 215
6.5.3	Multigantry or Modular-Style Systems	/ 215
6.6	DISPENSING HEAD	/ 217
6.7	NEEDLES	/ 218
6.8	PUMPS	/ 218
6.8.1	Pneumatic Pumps	/ 218
6.8.2	Piston-Type Pumps	/ 218
6.8.3	Rotary Pumps	/ 220
6.8.4	Auger Pumps	/ 220
6.8.5	Fluid Jet Pumps	/ 220
6.8.6	Overall Fluid-Handling System	/ 221
6.9	SYSTEM CONTROL	/ 222
6.9.1	Advanced Process/Software Controls	/ 222
6.9.2	Human Interface	/ 223

- 6.9.3 Computers / 223
- 6.9.4 Software / 223
- 6.9.5 System Calibration / 224
- 6.10 THE DISPENSING PROCESS / 224
 - 6.10.1 Material Constraints and Considerations / 224
 - 6.10.2 Substrates / 224
 - 6.10.3 Applications and Processes / 225
 - 6.10.4 Chip-on-Board (COB) / 225
 - 6.10.5 Dam/Fill / 226
 - 6.10.6 Underfill / 227
- 6.11 ENCAPSULATING WITH VACUUM ASSIST FOR CSPs AND OTHER PACKAGES / 229
- 6.12 PERFORMANCE / 231
 - 6.12.1 Positioning Accuracy / 231
 - 6.12.2 Shot Accuracy / 232
 - 6.12.3 Application Rate / 232
 - 6.12.4 Selecting the Right Equipment / 232
- 6.13 SUMMARY AND CONCLUSIONS / 232
- 6.14 REFERENCES / 233

Chapter 7. Molding for Area Array Packages

235

- 7.0 INTRODUCTION / 235
- 7.1 MOLDING MATERIALS / 235
- 7.2 TRANSFER-MOLDING EQUIPMENT / 237
- 7.3 MOLDING PROCESSES / 237
 - 7.3.1 Recommended Transfer-Molding Parameters / 240
 - 7.3.2 Area or Flood Molding / 244
 - 7.3.3 Injection Molding / 244
 - 7.3.4 Molding Underfill (MUF) / 245
 - 7.3.5 Preventing Molding Process Problems / 246
- 7.4 TROUBLESHOOTING GUIDE / 247
 - 7.4.1 Incomplete Fill and Knit Lines / 248
 - 7.4.2 Voids and Blisters / 249
 - 7.4.3 Flashing and Resin Bleed / 249
 - 7.4.4 Mold Staining and High Molding Temperature / 249
 - 7.4.5 Sticking / 250
- 7.5 TOOLING / 250
- 7.6 PRODUCTIVITY AND COST / 250
 - 7.6.1 Volume Dependency / 250
 - 7.6.2 Advantages of Area Molding / 250
 - 7.6.3 Liquid versus Solid Encapsulants / 251
- 7.7 RELIABILITY / 251
- 7.8 SUMMARY AND CONCLUSIONS / 251
- 7.9 FUTURE EXPECTATIONS / 252
