

○ Rural and urban hydrology

M G Mansell

Contents

1	Introduction	1
1.1	The hydrological cycle	1
1.2	Radiation balance	3
1.3	Characteristics of the water, air and land phases of the hydrological cycle	6
1.3.1	Characteristics of water and the oceans	6
1.3.2	Characteristics of the atmosphere	9
1.3.3	Characteristics of the land phase of the hydrological cycle	13
1.4	Water requirements	15
1.5	The effect of human activity on hydrological processes	17
1.5.1	Forestation and deforestation	18
1.5.2	Grazing and agriculture	18
1.5.3	Urbanisation	19
1.6	Hydrological management	20
1.6.1	Irrigation	21
1.6.2	Dams and reservoirs	21
1.6.3	Small-scale catchment management	23
1.6.4	Channelisation and levees	23
1.6.5	Land drainage	24
1.6.6	Urban drainage	24
1.7	Recent developments in enhancing water resources	25
1.7.1	Wastewater re-use	25
1.7.2	Desalination	25
1.7.3	Cloud seeding	25
1.8	Summary	26
1.9	References	26

2	Climate change	27
2.1	Historical perspectives	27
2.1.1	Measurement of climate over geological time-scale	28
2.1.2	Variations in climate over geological time-scale	30
2.1.3	Climate variations in recorded history	32
2.2	Causes of climate change	34
2.2.1	Solar variability	34
2.2.2	Orbital variations	35
2.2.3	Volcanic activity and major impacts	36
2.2.4	Human activities	36
2.3	The response of the Earth's climate system	38
2.3.1	Atmospheric-ocean interaction	39
2.3.2	General conclusions about the causes of climate change	43
2.4	Modelling of climate	43
2.4.1	Uncertainties in climate models	44
2.4.2	The use of global climate models	45
2.4.3	Confidence in climate models	48
2.5	Climate change predictions	49
2.5.1	Temperature	50
2.5.2	Precipitation	52
2.5.3	Evapotranspiration	52
2.5.4	Groundwater	54
2.5.5	Runoff	55
2.5.6	Sea level rise	57
2.5.7	Wind speed and storminess	58
2.6	Impact of climate change on water resources	58
2.6.1	The general impact on water resources	58
2.6.2	The impact on water supply	59
2.6.3	Domestic water demand	61
2.6.4	Agriculture	62
2.6.5	Industrial demand	62
2.6.6	Hydro-electric demand	62
2.7	General implications of climate change	63
2.8	References	64
3	Statistical tools	67
3.1	Statistical distributions	67
3.1.1	General properties of distributions	67
3.1.2	Common statistical distributions	72

3.1.3	The use of L-moments	76
3.1.4	Goodness of fit	77
3.2	Bivariate and multivariate analysis	81
3.2.1	Bivariate analysis	81
3.2.2	Multiple linear regression	85
3.3	Time-series analysis	86
3.3.1	Components of a time-series	86
3.3.2	Tests for randomness	88
3.3.3	Frequency analysis	93
3.3.4	Filtering	94
3.3.5	Autocorrelation	96
3.3.6	Cusum curves	99
3.3.7	The Hurst Coefficient	99
3.3.8	Measurement of seasonality	100
3.4	Models of time-series	101
3.4.1	Purely random processes	101
3.4.2	Moving average processes	102
3.4.3	Autoregressive processes	102
3.4.4	Mixed autoregressive-moving average processes	102
3.4.5	Models of streamflow	103
3.4.6	Fitting theoretical processes to observed time-series	103
3.5	Estimation from spatially distributed point data	104
3.6	Summary	106
3.7	References	106
<i>Appendix 3.1</i>	<i>Cumulative normal distribution</i>	107
<i>Appendix 3.2</i>	<i>χ^2 distribution</i>	110
<i>Appendix 3.3</i>	<i>t distribution</i>	112
4	Precipitation	115
4.1	Formation of precipitation	115
4.2	Types of precipitation	116
4.2.1	Frontal precipitation	116
4.2.2	Orographic precipitation	118
4.2.3	Convictional precipitation	119
4.2.4	Artificially induced precipitation	119
4.3	Geographical distribution of precipitation	120
4.4	Measurement of precipitation	121
4.4.1	Non-recording gauges	121
4.4.2	Recording gauges	122

4.4.3	Snowfall	123
4.4.4	Remote sensing	124
4.5	Analysis of precipitation data	125
4.5.1	Missing data	125
4.5.2	Spatial variation	128
4.5.3	Disaggregation of a rainfall time-series	130
4.6	The use of design rainfall	134
4.6.1	Historical records	134
4.6.2	Synthesis of rainfall time-series	134
4.6.3	Design storms	136
4.6.4	Depth- and intensity-duration-frequency curves	137
4.6.5	Drought-duration-frequency curves	140
4.6.6	Rainfall estimation for urban catchments	141
4.6.7	Rainfall estimation for rural catchments	151
4.6.8	Design storm profiles	155
4.6.9	Probable maximum precipitation	156
4.7	Summary	160
4.8	References	166
5	Evaporation and other losses	167
5.1	Interception	167
5.2	Depression storage	168
5.3	Infiltration	169
5.4	Evaporation and transpiration	171
5.4.1	General principles	171
5.4.2	Measurement of evaporation	173
5.4.3	Estimation of evapotranspiration using energy balance	174
5.4.4	FAO Penman-Monteith Equation	175
5.4.5	Crope evapotranspiration	179
5.5	Water balance	180
5.5.1	Water balance in rural catchments	180
5.5.2	Water balance in urban catchments	185
5.6	Approximate methods of estimating losses	186
5.7	Estimation of losses using the <i>Flood Estimation Handbook</i>	188
5.7.1	Standard percentage of runoff	189
5.7.2	The effect of catchment wetness and rainfall intensity	189
5.7.3	Catchment wetness for extreme precipitation	191
5.7.4	The effect of urbanisation	193

5.7.5	Standard percentage of runoff from observed data	194
5.7.6	Summary of the <i>Flood Estimation Handbook</i> method of estimating effective rainfall	195
5.8	Summary	196
5.9	References	197
Appendix 5.1	Calculation of net solar radiation from geographical data	198
Appendix 5.2	Example of evapotranspiration using the FAO Penman-Monteith Equation	200
